Nmr Spectroscopy And Its Application To Biomedical Research:

NMR Spectroscopy and its Application to Biomedical Research S.K. Sarkar, 1996-12-04 NMR has become the most diverse spectroscopic tool available to date in biomedical research. It is now routinely used to study biomolecular structure and dynamics particularly as a result of recent developments of a cascade of highly sophisticated multidimensional NMR pulse sequences and of advances in genetic engineering to produce biomolecules uniformly or selectively enriched with ^{13}C , ^{15}N and ^2H . Features of this book: Provides an up to date treatment of NMR techniques and their application to problems of biomedical interest. Most refined multidimensional pulse sequences including the basic aspects are covered by leading NMR spectroscopists. The book will be useful to NMR spectroscopists, biochemists and to molecular biologists interested in the use of NMR techniques for solving biological problems. NMR Spectroscopy and Its Applications to Biomedical Research

Susanta K. Sarkar, 1996 Nuclear Magnetic Resonance G A Webb, 2007-10-31 As a spectroscopic method Nuclear Magnetic Resonance (NMR) has seen spectacular growth over the past two decades both as a technique and in its applications. Today the applications of NMR span a wide range of scientific disciplines from physics to biology to medicine. Each volume of Nuclear Magnetic Resonance comprises a combination of annual and biennial reports which together provide comprehensive coverage of the literature on this topic. This Specialist Periodical Report reflects the growing volume of published work involving NMR techniques and applications in particular NMR of natural macromolecules which is covered in two reports: NMR of Proteins and Acids and NMR of Carbohydrates, Lipids and Membranes. For those wanting to become rapidly acquainted with specific areas of NMR, this title provides unrivalled scope of coverage. Seasoned practitioners of NMR will find this an invaluable source of current methods and applications. Specialist Periodical Reports provide systematic and detailed review coverage in major areas of chemical research. Compiled by teams of leading authorities in the relevant subject areas, the series creates a unique service for the active research chemist with regular in-depth accounts of progress in particular fields of chemistry. Subject coverage within different volumes of a given title is similar and publication is on an annual or biennial basis.

NMR: Principles and Applications to Biomedical Research Jay W. Pettegrew, 2012-12-06 Nuclear magnetic resonance (NMR) is having an enormous impact on biomedical research both at the basic science and clinical levels. In order to appreciate the elegance and power of this technology, a historical perspective is in order. In 1924 Pauli suggested that hydrogen nuclei might possess a magnetic moment. This was in fact confirmed by Rabi in 1939 who demonstrated that a beam of hydrogen molecules in the presence of a magnetic field could be rotated by radio frequency fields resonating at the Larmor frequency. The first successful NMR experiments in condensed matter were independently conducted in late 1945 by Purcell, Torrey and Pound and by Bloch. Hansen and Packard. The Purcell group detected proton NMR in solid paraffin and the Bloch group detected proton in liquid water. Bloch and Purcell received the Nobel Prize in physics in 1952 for these observations. Until about 1952, studies of liquids and solids with broad resonance lines dominated the field of NMR. However,

the reports of ^3P NMR chemical shifts in several compounds in 1949 by Knight of ^{14}N resonances in several ions by Proctor and Yu in 1950 and of ^{19}F resonances in several compounds in 1950 by Dickinson led to the development of high resolution NMR in liquids since the molecular motions in liquids result in very narrow lines compared to those in solids much smaller chemical shifts could be detected
