It is intended to result in the creation of the Semantic Web on which computers will be able to deal with the meaning, semantics of Web data and hence to process them in a more effective and autonomous way. This new version of the Web introduces a multitude of novel concepts, terms and acronyms: Purpose, Scope and Methods. This dictionary is an effort to specify the terminological basis of emerging XML and Semantic Web technologies. The ultimate goal of this dictionary is even broader than just to define the meaning of new words; it aims to develop a proper understanding of these leading edge technologies. To achieve this, comprehensible definitions of technical terms are supported by numerous diagrams and code snippets, clearly annotated and explained. The main areas covered in this dictionary are: 1 XML syntax and core technologies such as Namespaces, Infoset and XML Schema; 2 all the major members of the XML family of technologies such as XSLT, XPath and XLink; 3 numerous XML based domain specific languages such as NewsML, News Markup Language.
