The Unfinished Quest Clair T. Berube,2008-06-01 Modern educators are currently ideologically in one of two camps
 those who see American education as heading in the right direction and those who fear that it has gone tragically astray For
 over 100 years the American educational system has been the hope of those who want to level the playing field of opportunity
 yet today we continue to lag behind several industrialized countries when comparing standardized science test scores Is this
 acceptable in the most advanced affluent country on earth Why are we not the reigning educational system on the planet And
 are standardized test scores even the best way to assess the type of learning it takes to lead the world in science
 achievement The nature of science does not lend itself well to bubble tests yet these assessments are all we have to prove
 that our students are good scientists This book was born of a science teacher s frustration brought on by the standardized
 testing movement s reliance on high stakes tests as the sole measurement tool with which to measure achievement Science
 by it s very nature relies on original thinking for discovery and innovation How can this be measured by a bubble test And
 how do these high stakes tests affect minorities girls those with disabilities and at risk students September 11 2001 alerted
 us that we Americans can be less creative than our enemies an unprecedented event in American history What if changing
 the way we teach and assess science learning better prepares our citizens for creative preventions and solutions to world
 problems instead of creating citizens who have to react to world problems The nature of science begs a better way
