Robert of Chester's Redaction of Euclid's Elements, the so-called Adelard II Version H.L. Busard, Menso Folkerts, 1992-04-03 **Robert of Chester's Redaction of Euclid's Elements, the so-called Adelard II Version** H.L. Busard, M. Folkerts, 2012-12-06 The Latin Version II till now attributed to Adelard of Bath is edited here for the first time It was the most influential Euclid text in the Latin West in the 12th and 13th centuries As the large number of manuscripts and the numerous quotations in other scientific and philosophical texts show it was far better known than the three Euclid translations made from the Arabic in the 12th century Adelard of Bath version I Hermann of Carinthia Gerard of Cremona Version II became the basis of later reworkings in which the enunciations were taken over but new proofs supplied the most important text of this kind is the redaction made by Campanus in the late 1250s which became the standard Latin Euclid in the later Middle Ages The introduction deals with the questions of when and by whom version II was written Since Marshall Clagett's fundamental article 1953 it has been generally accepted that version II is one of three Euclid texts attributable to Adelard of Bath But a comparison of the text of version II with those of versions I and III yields little or no reason to assume that Adelard was the author of version II Version II must have been written later than version I and before version III its author was acquainted with Euclid texts of the Boethius tradition and with two of those transmitted from Arabic version I almost certainly by Adelard and the version by Hermann of Carinthia *Robert of Chester's (?) Redaction of Euclid's Elements, the So-called Adelard II Version* Hubertus Lambertus Ludovicus Busard, 1992 Robert of Chester's Redaction of Euclid's Elements, the So Called Adelard II Version Hubert L. L. Busard, Menso Folkerts, 1992 **Robert of Chester's (?) Redaction of Euclid's Elements, the So-called Adelard II Version** Hubertus Lambertus Ludovicus Busard, Menso Folkerts, 1992 Robert of Chester's Redaction of Euclid's Elements, the so-called Adelard II Version H.L. Busard, M. Folkerts, 2012-12-06 **The Secular Clergy in England, 1066-1216** Hugh M. Thomas, 2014 The secular clergy priests and other clerics outside of monastic orders were among the most influential and powerful groups in European society during the central Middle Ages The secular clergy got their title from the Latin word for world saeculum and secular clerics kept the Church running in the world beyond the cloister wall with responsibility for the bulk of pastoral care and ecclesiastical administration This gave them enormous religious influence although they were considered too worldly by many contemporary moralists trying for instance to oppose the elimination of clerical marriage and concubinage Although their worldliness created many tensions it also gave the secular clergy much worldly influence Contemporaries treated elite secular clerics as equivalent to knights and some were as wealthy as minor barons Secular clerics had a huge role in the rise of royal bureaucracy one of the key historical developments of the period They were instrumental to the intellectual and cultural flowering of the twelfth century the rise of the schools the creation of the book trade and the invention of universities They performed music produced literature in a variety of genres and languages and patronized art and

architecture Indeed this volume argues that they contributed more than any other group to the Twelfth Century Renaissance Yet the secular clergy as a group have received almost no attention from scholars unlike monks nuns or secular nobles In *The Secular Clergy in England 1066-1216* Hugh Thomas aims to correct this deficiency through a major study of the secular clergy below the level of bishop in England from 1066 to 1216 *Research in History and Philosophy of Mathematics* Maria Zack, Elaine Landry, 2016-12-15 This volume contains seventeen papers that were presented at the 2015 Annual Meeting of the Canadian Society for History and Philosophy of Mathematics La Société Canadienne d'Histoire et de Philosophie des Mathématiques held in Washington D C In addition to showcasing rigorously reviewed modern scholarship on an interesting variety of general topics in the history and philosophy of mathematics this meeting also honored the memories of Jacqueline Jackie Stedall and Ivor Grattan Guinness celebrated the Centennial of the Mathematical Association of America and considered the importance of mathematical communities in a special session These themes and many others are explored in these collected papers which cover subjects such as New evidence that the Latin translation of Euclid's Elements was based on the Arabic version attributed to al-Jayjani Work done on the arc rampant in the seventeenth century The history of numerical methods for finding roots of nonlinear equations An original play featuring a dialogue between George Boole and Augustus De Morgan that explores the relationship between them Key issues in the digital preservation of mathematical material for future generations A look at the first twenty five years of The American Mathematical Monthly in the context of the evolving American mathematical community The growth of Math Circles and the unique ways they are being implemented in the United States Written by leading scholars in the field these papers will be accessible to not only mathematicians and students of the history and philosophy of mathematics but also anyone with a general interest in mathematics [The History of Mathematical Proof in Ancient Traditions](#) Karine Chemla, 2012-07-05 This radical profoundly scholarly book explores the purposes and nature of proof in a range of historical settings It overturns the view that the first mathematical proofs were in Greek geometry and rested on the logical insights of Aristotle by showing how much of that view is an artefact of nineteenth century historical scholarship It documents the existence of proofs in ancient mathematical writings about numbers and shows that practitioners of mathematics in Mesopotamian Chinese and Indian cultures knew how to prove the correctness of algorithms which are much more prominent outside the limited range of surviving classical Greek texts that historians have taken as the paradigm of ancient mathematics It opens the way to providing the first comprehensive textually based history of proof **Robert of Chester's Redaction of Euclid's Elements, the so-called Adelard II Version** H.L. Busard, M. Folkerts, 2012-08-28 **The Development of Mathematics in Medieval Europe** Menso Folkerts, 2024-10-28 The Development of Mathematics in Medieval Europe complements the previous collection of articles by Menso Folkerts Essays on Early Medieval Mathematics and deals with the development of mathematics in Europe from the 12th century to about 1500 In the 12th century European learning was greatly transformed by translations from Arabic into Latin Such translations

in the field of mathematics and their influence are here described and analysed notably al Khwarizmi's Arithmetic through which Europe became acquainted with the Hindu Arabic numerals and Euclid's Elements Five articles are dedicated to Johannes Regiomontanus perhaps the most original mathematician of the 15th century and to his discoveries in trigonometry algebra and other fields The knowledge and application of Euclid's Elements in 13th and 15th century Italy are discussed in three studies while the last article treats the development of algebra in South Germany around 1500 where much of the modern symbolism used in algebra was developed

Historiography of the History of Science in Islamicate Societies Sonja Brentjes, 2023-09-05 This book presents eight papers about important historiographical issues as debated in the history of science in Islamicate societies the history of science and philosophy of medieval Latin Europe and the history of mathematics as an academic discipline Six papers deal with themes about the sciences in Islamicate societies from the ninth to the seventeenth centuries among them novelty context and decline Two other papers discuss the historiographical practices of historians of mathematics and other disciplines in the nineteenth and twentieth centuries The central argument of the collected papers is that in addition and beyond the study of scientific texts and instruments historians of science in Islamicate societies need to pay attention to cultural material and social aspects that shaped the scientific activities of the authors and makers of such texts and instruments It is pointed out that the diachronic de contextualized comparison between methods and results of scholars from different centuries regions and cultures often leads to serious distortions of the historical record and is responsible for the long term neglect of scholarly activities after the so called Golden Age The book will appeal in particular to teachers of history of science in Islamicate societies to graduate students interested in issues of methodology and to historians of science grappling with the unresolved problems of how think and write about the sciences in concrete societies of the past instead of subsuming all extant texts instruments maps and other objects related to the sciences under macro level concepts like Islam or Latin Europe CS 1114

Words, Texts, and Concepts Cruising the Mediterranean Sea Gerhard Endress, 2004 The remarkable extension in depth and width of Muslim intellectual life can be fathomed and measured only against the background of what went on immediately before and simultaneously elsewhere or it will remain in any real sense unexplored This statement by the late Franz Rosenthal is in a sense the red thread of the present volume which unites 35 articles by renowned scholars of Islamic Studies Middle Eastern Languages and Civilizations and various allied fields of research in honour of a scholar congenial to Franz Rosenthal and exemplary in his scientific carefulness and integrity Dr Gerhard Endress Professor of Oriental Philology and Islamic Studies at the Ruhr University Bochum Central topics of the contributions include Arabic philosophy and its Greek sources and Latin reception the history and historiography of Arabic Islamic science and Islamic concepts of language knowledge science and pedagogy Other articles deal with qur'anic studies Arabic lexicography and linguistics the history of Middle Eastern civilizations the medieval

translation movements from Greek into Arabic and from Arabic into Latin as well as with political and eschatological theories of medieval Islam Rooted in different scientific traditions and methodological approaches the studies collected in this Festschrift form a vivid and stimulating synopsis of more than 1000 years of Middle Eastern and Mediterranean intellectual social and cultural history

Encounters with Euclid Benjamin Wardhaugh,2021-07-06 In this lively and informative book Benjamin Wardhaugh explains how Euclid's text journeyed from antiquity to the Renaissance introducing some of the many readers copyists and editors who left their mark on the Elements before handing it on He shows how some read the book as a work of philosophy while others viewed it as a practical guide to life He examines the many different contexts in which Euclid's book and his geometry were put to use from the Neoplatonic school at Athens and the artisans studios of medieval Baghdad to the Jesuit mission in China and the workshops of Restoration London Wardhaugh shows how the Elements inspired ideas in theology art and music and how the book has acquired new relevance to the strange geometries of dark matter and curved space
