A pharmaceutical company wanted to test a new drug developed to lessen the effects of the common cold. To test this drug, scientists tested fifty volunteers, each of whom was suffering the effects of a cold. Twenty-five of the people were given the drug, while the other twenty five were given a placebo, a sugar pill. None of the participants knew who was which pill. All participants received a pill at 8:00 a.m. daily for the first three days of the study. All participants lived in the same environment, with the same climate, eating the same diet, and having the same level of activity. The severity of the cold, hence the effectiveness of the pill, was determined by the number of tissues each person used within a twenty-four hour period. At the end of a seven-day period it was concluded that those with the sugar pill had their symptoms disappear as well as those who had taken the new wonder drug. The executive committee decided to produce the drug anyway thinking that the public would do anything to relieve the symptoms of a cold.

Scientific Method Frederic William Westaway, 1912 **Scientific Method, Its Philosophy and Its Practice** F. W. Westaway, 2015-06-26 Excerpt from *Scientific Method Its Philosophy and Its Practice* This book is chiefly intended for those who feel interested in the methodical procedure of scientific investigation and although some parts of it may appeal most strongly to science teachers yet the fact that scientific method is now destined to play so great a part not only in the whole of the educational field but also in every other field of thought and activity may suffice to make the book welcome to a much wider circle than those whose interests are confined to the laboratory and the lecture table The method adopted by men of science in their work is far different now from what it was in the time of Aristotle or even In the time of Bacon Fundamentally the main processes of the method of science are in character not direct but inverse and inverse processes almost always present great difficulties The method of science has thus been a thing of exceedingly slow growth and even now is by no means fully developed We smile at the methods of Descartes who himself found serious fault with the methods of the ancients and there is no doubt at all that our descendants will greatly improve on the methods of the present day There are however a few original thinkers in the worlds history who have wrought strongly upon opinion and practice in scientific method and who in their day effected enormous improvements upon the methods of their predecessors Among these Aristotle and Bacon stand supreme But Aristotle was a pupil of Plato and Plato of Socrates Bacon s method was in strong contrast to that of his contemporary Descartes and Locke and Hume also played important parts in placing the method of science on firm foundations Locke in tracing to its origin the knowledge we believe we possess and Hume in developing correct notions of causation About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such

Single Case Research Methodology Jennifer R. Ledford, David L. Gast, 2014-03-26 In this anticipated new edition of Single Case Research Methodology David L. Gast and Jennifer R. Ledford detail why and how to apply standard principles of single case research methodology to one's own research or professional project. Using numerous and varied examples they demonstrate how single case research can be used for research in behavioral and school psychology, special education, speech and communication sciences, language and literacy, occupational therapy, and social work. This thoroughly updated new edition features two entirely new chapters on measurement systems and controversial issues in single subject research, in addition to sample data sheets, graphic displays, and detailed guidelines for conducting visual analysis of graphic data. This book will be an important resource to student researchers, practitioners, and university faculty who are interested in answering applied research questions and objectively evaluating educational and clinical practices.

British Journal of Dental Science and Prosthetics, 1885 Just Methods Alison M. Jaggar, 2015-11-17 The supplemented edition of this important reader includes a substantive new introduction by the author on the changing nature of feminist methodology. It takes into account the implications of a major new study included for the first time in this book on poverty and gender in equality, and it includes an article discussing the ways in which this study was conducted using the research methods put forward by the first edition. This article begins by explaining why a new and better poverty metric is needed and why developing such a metric requires an alternative methodological approach inspired by feminism. Feminist research is a growing tradition of inquiry that aims to produce knowledge not biased by inequitable assumptions about gender and related categories such as class, race, religion, sexuality, and nationality. Just Methods is designed for upper-level undergraduate and graduate students in a range of disciplines. Rather than being concerned with particular techniques of inquiry, the interdisciplinary readings in this book address broad questions of research methodology. They are designed to help researchers think critically and constructively about the epistemological and ethical implications of various approaches to research, selection and research design, evidence gathering techniques, and publication of results. A key theme running through the readings is the complex interrelationship between social power and inequality on the one hand and the production of knowledge on the other. A second and related theme is the inseparability of research projects and methodologies from ethical and political values.
