Scientific Papers Of Tjalling C Koopmans Volume 1:

Frontiers of Economics Abu N. Wahid, 2002-06-30 Economics Nobel laureates are the pioneers of the science of economics. They are the most brilliant products of the discipline and have made enormous original contributions to the field of economics and oftentimes history, political science, business, and other subjects. Their works, struggles, successes, and failures are fascinating, and readers are given a glimpse into each laureate's life where and when they were born and raised, what schools they attended, and who influenced their intellectual development. Most importantly, each laureate's often complex corpus of work is described as succinctly as possible without losing the work's original flavor, what it contributed to the field, and how it was received by peers and how it affected the world. A list of selected further readings concludes each entry, directing the reader to the primary and secondary works essential to understanding the works of these towering figures. Arranged chronologically by year of award, all 44 entries cogently explain the laureate's life's work in language even non-economists can follow. Economists interested in the intellectual history of their discipline and professors and students of business will find Wahid's book a very useful resource when seeking out the basic outlines of the thoughts of the scholars who have shaped the fields of economic inquiry, practice, and research. Also, any student in the social sciences thumbing through this book will instantly recognize many currents of thought that have influenced the way scholars in their discipline approach their craft.

Science Outside the Laboratory Marcel Boumans, 2015-05-01 Social science experiments often cannot be analyzed under controlled conditions as many take place outside a laboratory. None the less, measurement provides scientists with a sound basis for collecting and analyzing the results of field research. *Science Outside the Laboratory* examines the relationship between measurement theory and field investigations through the philosophy of science.

The Nobel Memorial Laureates in Economics Howard R. Vane, Chris Mulhearn, 2005 This book will continue to share shelf space next to my current textbooks. As a librarian, such utility makes this a desirable addition to any educator's collection. As a history of economic thought book, Vane and Mulhearn have brought together a breadth of information that can be found through disparate sources but at a cost of effort and especially for students' qualitative decisions regarding sources. The convenience of their

starting methodology breadth over depth coverage and clear intention of writing to an audience of students makes this a useful text Kirk Douglas Johnson *Journal of the History of Economic Thought* The essays summarizing the main achievements of the prize winners are well written and to the point They are short enough that they never cause the reader to lose interest but substantive enough to let you know what the winners accomplishments amount to These compact factually accurate essays mark the real value of the book as a reference work there is little for which to fault the authors Vane and Mulhearn have done a very nice job with the book and it is an added bonus that it includes a formal portrait photograph of each prize winner Bradley W Bateman *History Political Economy* Vane and Mulhearn have produced a useful reference work John Quiggin *Economic Analysis and Policy* This collection has the capacity to surprise the reader You learn all sorts of new and sometimes admirable things about these economists and about the richness of the profession that is often obscured from students of the subject John Lodewijks *History of Economics Review* This volume provides a non technical description of the main published works of every Nobel Memorial Economics winner from the first annual award in 1969 to 2004 This is a reference book par excellence it will interest not only those having some involvement with economics past or present but it should also attract more general readers wanting to unravel some of the mysteries surrounding economics and economists Economic Outlook and Business Review Vane and Mulhearn have produced an introduction to the careers and major publications of the 55 economists awarded the Bank of Sweden Prize in Economic Sciences in Memory of Alfred Nobel between 1969 and 2004 The short essays on each economist are readable and accurate they provide a discussion of the subjects major contributions and an introduction to the secondary literature often with the outstanding reports on the laureates work provided to the Economic Prize Committee of the Royal Swedish Academy of Sciences The collection is introduced with a review of the prize and the common characteristics of the winners thus far all neatly summarized in a table with each laureate s year and country of birth university year of first and higher degrees affiliation at the time of the award field of study and a summary citation This volume provides a very useful introduction to the development of economic ideas in the last three quarters of the 20th century Highly recommended D E Moggridge *Choice* Every serious research economist will want to have a look at this comprehensive work Edwin Burmeister *Research Professor of Economics Duke University US* The award of the Nobel Prize has for more than thirty years been economists way of informing the public at large about what work most of them think is important and about who has done it Anyone seeking to understand the development of recent economic ideas and the profession that has created them must deal with the Prize s history and Vane and Mulhearn have provided an indispensable guide to it brief readable and accurate David Laidler *Professor Emeritus and Bank of Montreal Professor University of Western Ontario Canada* This is a splendid account of the personal stories of the Nobel Laureates in Economics the diversity of practice of recent economists and perhaps above all the nature of **Economic Thought Since Keynes** Michel Beaud, Gilles Dostaler, 2005-09-27 *Economic Thought Since Keynes* provides a concise overview of changing

Competitive Markets Anthony Horsley, Andrew J. Wrobel, 2016-10-19 The authors present a new formal framework for finding the long run competitive market equilibrium through short run equilibria by exploiting the operating policies and plant valuations This short run approach develops ideas of Boiteux and Koopmans Applied to the peak load pricing of electricity generated by thermal hydro and pumped storage plants it gives a sound and practical method of valuing the fixed assets in this case the river flows and the geological sites suitable for reservoirs Its main mathematical basis is the producer's short run profit maximization programme and its dual their solutions have relatively simple forms that can greatly ease the fixed point problem of solving for the general equilibrium Since the optimal values profit and cost functions are usually nondifferentiable this is so when there are joint costs of production such as capacity constraints nonsmooth calculus is employed to resolve long standing discrepancies between textbook theory and industrial reality by giving subdifferential extensions of basic results of microeconomics including the Wong Viner Envelope Theorem Report of Research Activities Yale University. Cowles Foundation for Research in Economics, 1954 **Machine Dreams** Philip Mirowski, 2002 This is the first cross over book into the history of science written by an historian of economics It shows how history of technology can

be integrated with the history of economic ideas The analysis combines Cold War history with the history of postwar economics in America and later elsewhere revealing that the Pax Americana had much to do with abstruse and formal doctrines such as linear programming and game theory It links the literature on cyborg to economics an element missing in literature to date The treatment further calls into question the idea that economics has been immune to postmodern currents arguing that neoclassical economics has participated in the deconstruction of the integral self Finally it argues for an alliance of computational and institutional themes and challenges the widespread impression that there is nothing else besides American neoclassical economic theory left standing after the demise of Marxism
