40 Years of Research on Rent Seeking 1 Roger D.

Congleton, Arye L. Hillman, Kai A. Konrad, 2008-08-01 The last survey of the rent seeking literature took place more than a decade ago Since that time a great deal of new research has been published in a wide variety of journals covering a wide variety of topics The scope of that research is such that very few researchers will be familiar with more than a small part of contemporary research and very few libraries will be able to provide access to the full breadth of that research This two volume collection provides an extensive overview of 40 years of rent seeking research The volumes include the foundational papers many of which have not been in print for two decades They include recent game theoretic analyses of rent seeking contests and also applications of the rent seeking concepts and methodology to economic regulation international trade policy economic history political competition and other social phenomena The new collection is more than twice as large as any previous collection and both updates and extends the earlier surveys Volume I contains previously published research on the theory of rent seeking contests which is an important strand of contemporary game theory Volume II contains previously published research that uses the theory of rent seeking to analyze a broad range of public policy and social science topics The editors spent more than a year assembling possible papers and although the selections fill two large volumes many more papers could have been included

Phenomenology and the Extreme Sport Experience Eric Brymer, Robert

Schweitzer,2017-03-27 Understanding the motivations behind those who partake in extreme sports can be difficult for some. If the popular conception holds that the incentive behind extreme sports participation is entirely to do with risking one's life, then this confusion will continue to exist. However, an in-depth examination of the phenomenology of the extreme sport experience yields a much more complex picture. This book revisits the definition of extreme sports as those activities where a mismanaged mistake or accident would most likely result in death. Extreme sports are not necessarily synonymous with risk, and participation may not be about risk-taking. Participants report deep inner transformations that influence world views and meaningfulness, feelings of coming home, and authentic integration, as well as a freedom beyond the everyday. Phenomenologically, these experiences have been interpreted as transcendent of time, other space, and body. Extreme sport participation therefore points to a more potent life-enhancing endeavour worthy of further investigation. This book adopts a broad hermeneutic phenomenological approach to critique the assumed relationship to risk-taking, the death wish, and the concept of No Fear in extreme sports, and repositions the experience in a previously unexplored manner. This is valuable reading for students and academics interested in Sports Psychology, Social Psychology, Health Psychology, Tourism, Leisure Studies, and the practical applications of phenomenology.

The Ordering of Love Madeleine L'Engle,2005 A collection of nearly two hundred poems by the prolific writer, including eighteen never before published, weaves together intangible experiences like grief and joy with everyday events of life such as bus rides and hospital visits into vibrant patterns of truth and faith.

New Directions in Human Information Behavior Amanda Spink, Charles Cole,2006-07-11 *New Directions in Human Information Behavior*, co-edited by Drs Amanda Spink and Charles Cole, provides an understanding of the new directions leading edge theories and models in human information behavior. Information behavior is conceptualized as complex human information-related processes that are embedded within an individual's everyday social and life processes. The book presents chapters by an interdisciplinary range of scholars who show new directions that often challenge the established views and paradigms of information behavior studies. Beginning with an evolutionary framework, the book examines information behaviors over various epochs of human existence from the Palaeolithic Era and within pre-literate societies to contemporary behaviors by 21st-century humans. Drawing upon social and psychological science theories, the book presents a more integrated and holistic approach to the understanding of information behaviors that include multitasking and non-linear longitudinal processes, individuals' information ground, information practices, and information sharing, digital behaviors, and human information organizing behaviors. The final chapter of the book integrates these new approaches and presents an overview of the key trends, theories, and models for further research. This book is directly relevant to information scientists, librarians, social and evolutionary psychologists, undergraduate and graduate students, academics, and information professionals interested in human information behavior. They will find this book of particular benefit.
