Macroeconometric Modelling:

A History of Macroeconometric Model-building Ronald G. Bodkin, Lawrence Robert Klein, Kanta Marwah, 1991 This major book presents for the first time an authoritative history of developments in macroeconometric modelling since the 1930s. It focuses in particular on the construction of mathematical statistical models of entire economies estimated from national accounts and other macroeconomic data. International and comparative in scope, the book contains chapters prepared by specialists from the different countries concerned. This landmark book is indispensable to an understanding of the history and development of large scale econometric models of modern economies. *Time Series Analysis and Macroeconometric Modelling* Kenneth Frank Wallis, 1995-01-01 An excellent reference volume of this author's work bringing together articles published over a 25 year span on the statistical analysis of economic time series, large scale macroeconomic modelling and the interface between them. Aslib Book Guide. This major volume of essays by Kenneth F. Wallis features 28 articles published over a quarter of a century on the statistical analysis of economic time series, large scale macroeconometric modelling and the interface between them. The first part deals with time series econometrics and includes significant early contributions to the development of the LSE tradition in time series econometrics, which is the dominant British tradition and has considerable influence worldwide. Later sections discuss theoretical and practical issues in modelling seasonality and forecasting with applications in both large scale and small scale models. The final section summarizes the research programme of the ESRC Macroeconomic Modelling Bureau, a unique comparison project among economy wide macroeconometric models. **Global and National Macroeconometric Modelling** Anthony Garratt, Kevin Lee, M. Hashem Pesaran, 2012-03-15 Providing a description of the state of modelling in global and national economies, this title introduces an approach to modelling that can readily be adopted for use in understanding how economies work and in generating forecasts for decision makers and policy makers alike. *Macroeconometric Models* Władysław Welfe, 2013-02-15 This book gives a comprehensive description of macroeconometric modeling and its development over time. The first part depicts the history of macroeconometric model building, starting with Jan Tinbergen's and Lawrence R. Klein's contributions. It is unique in summarizing the development and specific structure of macroeconometric models built in North America, Europe and various other parts of the world. The work thus offers an extensive source for researchers in the field. The second part of the book covers the systematic characteristics of macroeconometric models. It includes the household and enterprise sectors, disequilibria, financial flows and money market sectors. *Challenges for Macroeconomic Modelling* W. Driehuis, M.M.G. Fase, H. den Hartog, 2014-06-28 This book collects the revised and edited proceedings of the conference held in honour of the 50th anniversary of Professor Tinbergen's first macroeconomic policy model. Written by experts both in the field of model building and policy analysis, the contributions provide an invaluable overview of the state of the art and the use of macroeconomic models in our time. **Global and National Macroeconometric Modelling** Anthony

Garratt,2006-08-03 Providing a description of the state of modelling in global and national economies this title introduces an approach to modelling that can readily be adopted for use in understanding how economies work and in generating forecasts for decision makers and policy makers alike **The Econometrics of Macroeconomic Modelling** Gunnar Bårdsen,Øyvind Eitrheim,Eilev Jansen,Ragnar Nymoen,2005-04-14 Macroeconometric models in many ways the flagships of the economist s profession in the 1960s came under increasing attack from both theoretical economist and practitioners in the late 1970s Critics referred to their lack of microeconomic theoretical foundations ad hoc models of expectations lack of identification neglect of dynamics and non stationarity and poor forecasting properties By the start of the 1990s the status of macroeconometric models had declined markedly and had fallen completely out of and with academic economics Nevertheless unlike the dinosaurs to which they often have been likened macroeconometric models have never completely disappeared from the scene This book describes how and why the discipline of macroeconometric modelling continues to play a role for economic policymaking by adapting to changing demands in response for instance to new policy regimes like inflation targeting Model builders have adopted new insights from economic theory and taken advantage of the methodological and conceptual advances within time series econometrics over the last twenty years The modelling of wages and prices takes a central part in the book as the authors interpret and evaluate the last forty years of international research experience in the light of the Norwegian main course model of inflation in a small open economy The preferred model is a dynamic model of incomplete competition which is evaluated against alternatives as diverse as the Phillips curve Nickell Layard wage curves the New Keynesian Phillips curve and monetary inflation models on data from the Euro area the UK and Norway The wage price core model is built into a small econometric model for Norway to analyse the transmission mechanism and to evaluate monetary policy rules The final chapter explores the main sources of forecast failure likely to occur in a practical modelling situation using the large scale model RIMINI and the inflation models of earlier chapters as case studies Rational Expectations in Macroeconomic Models P. Fisher,1992-08-31 It is commonly believed that macroeconomic models are not useful for policy analysis because they do not take proper account of agents expectations Over the last decade mainstream macroeconomic models in the UK and elsewhere have taken on board the Rational Expectations Revolution by explicitly incorporating expectations of the future In principle one can perform the same technical exercises on a forward expectations model as on a conventional model and more Rational Expectations in Macroeconomic Models deals with the numerical methods necessary to carry out policy analysis and forecasting with these models These methods are often passed on by word of mouth or confined to obscure journals Rational Expectations in Macroeconomic Models brings them together with applications which are interesting in their own right There is no comparable textbook in the literature The specific subjects include i solving for model consistent expectations ii the choice of terminal condition and time horizon iii experimental design i e the effect of temporary vs permanent anticipated vs

unanticipated shocks deterministic vs stochastic dynamic vs static simulation iv the role of exchange rate v optimal control and inflation output tradeoffs The models used are those of the Liverpool Research Group in Macroeconomics the London Business School and the National Institute of Economic and Social Research Structural Change in Macroeconomic Models M.J. Vilarès, 2012-12-06 This book grew out of a Doctorat D Etat thesis presented at the University of Dijon Institut Mathématique Economiques IME It aims to show that quantity rationing theory provides the means of improving macroeconomic modelling in the study of structural changes The empirical results presented in the last chapter concerning Portuguese economy and in the last Appendix concerning the French economy although preliminary suggested that the effort is rewarding and should be continued My debts are many An important part of the research work was accomplished during my visit to the Institut National de la Statistique et des Etudes Economiques INSEE Paris where I have benefited from stimulating discussions particularly with P Villa and infor matical support I have also received comments and suggestions from R Quandt J J Laffont P Kooiman and P Y Henin I am specially indebted to P Balestra for encouraging and valuable discussions particularly in the field of econometric methods My thanks go also to an anonymous referee His constructive criticism and suggestions resulted in a number of improvements to an earlier version of this book I cannot forget my friend A Costa from BP A Porto who has helped me in the preparation of this work Last but not least I would like to thank my wife for her encouragement and patience throughout these years Of course I am the only one responsible for any remaining errors **Econometric Modelling** Sean Holly, Martin Weale, 2000-09-14 The latest techniques used in modelling the economy with policy analysis and applications **Modelling Europe** Antonella Rancan, Francesco Sergi, 2024-08-20 What was the role of economists and economics in the making of the European Union This book sheds light on the activities of a particular type of economic experts the macroeconomic modellers of the Directorate General for Economic and Financial Affairs DG II who built multi country macroeconomic models of the European Economic Community These models aim at studying the macroeconomic interactions between national economies and at providing insights about the effects of coordinating or not national economic policies The book documents the origins challenges and progress made by DG II s experts through building these models This book provides insight into the influence of multi country models on modern economics It will be relevant to students and researchers interested in the history of economic thought and the development of macroeconomic policy Macroeconometric Modelling and Policy Analysis , 2004 **Theory, Measurement, and Policy** V. Pandit, 2008 Presidential addresses delivered at the annual conferences of TIES *Inside a Modern Macroeconometric Model* Alan A. Powell, Christopher W. Murphy, 2012-12-06 As Ken Wallis 1993 has pOinted out all macroeconomic forecasters and policy analysts use economic models That is they have a way of going from assumptions about macroeconomic policy and the international environment to a prediction of the likely future state of the economy Some people do this in their heads Increasingly though forecasting and policy analysis is based on a formal explicit model

represented by a set of mathematical equations and solved by computer This provides a framework for handling in a consistent and systematic manner the ever increasing amounts of relevant information Macroeconometric modelling though is an inexact science A manageable model must focus only on the major driving forces in a complex economy made up of millions of households and firms International economic agencies such as the IMF and OECD and most treasuries and central banks in western countries use macroeconometric models in their forecasting and policy analysis Models are also used for teaching and research in universities as well as for commercial forecasting in the private sector

Macroeconometric Modelling of the West German Economy Bernhard Gahlen,1985 **Models of Disequilibrium and Shortage in Centrally Planned Economies** C.M. Davis,W. Charemza,2012-12-06

The centrally planned economies CPEs of the Soviet Union and Eastern Europe have experienced severe imbalances in domestic and external markets over the past several decades As a result they have been chronically afflicted by problems such as excess demand repressed inflation deficits of commodities queues waiting lists and forced savings Economists have responded to these phenomena by developing appropriate theoretical and empirical models of CPEs Of particular note have been the pioneering studies of Richard Portes on disequilibrium econometric models and Janos Kornai on the shortage economy Each approach has attracted followers who have produced numerous innovative macro and microeconomic models of Poland Czechoslovakia the German Democratic Republic Hungary and the USSR These models have proved to be of considerable value in the analysis of the causes consequences and remedies of disequilibrium phenomena Inevitably the new research has also generated controversies both between and within the schools of shortage and disequilibrium modelling concerning the fundamental nature of the socialist economy theoretical concepts and definitions the specification of models estimation techniques interpretation of empirical findings and policy recommendations Furthermore the research effort has been energetic but incomplete so many gaps exist in the field

India in a Globalising World Rokkam Radhakrishna,C. H. Hanumantha Rao,2006 Chennamaneni H Hanumantha Rao b 1929 Indian economist revised version of papers presented at a seminar held at Hyderabad during 16 17 November 2004 **Macroeconomic Modeling And Policy Analysis For Less Developed Countries** Mohammed F

Khayum,2019-03-07 This book provides an overview of macroeconometric modeling for less developed countries a description of the structure and performance of Guyana s economy an empirical testing of the model using annual data for Guyana and a simulation approach to policy evaluation Macroeconomic Modelling in a Changing World Christopher Allen,Chris Allen,Stephen Hall,1997-02-12 Macroeconomic Modelling in a Changing World Towards a Common Approach Edited by Chris Allen and Stephen Hall Practical economic model building has changed enormously over the last twenty years Econometrics has become much more sophisticated with the introduction of cointegration and non stationary time series analysis The use of economic theory in the form of complex non linear cross equation restrictions is now much more widespread and the explicit modelling of expectations and credibility effects is more satisfactory This has meant that the old

style macroeconomic models which were complex by virtue of their size alone have been replaced by a generation of new models which embody complex theory and estimation to provide more superior forecasting and policy tools Macroeconomic Modelling in a Changing World outlines the modelling approach which has been adopted at the Centre for Economic Forecasting at the London Business School one of the world's leading research institutes into macroeconomic modelling in building its own models Using explicit examples and illustrations the authors examine the latest state of the art models and answer questions such as How are modern econometrics used by model builders How should we deal with structural change How should expectations be modelled How are models used in practice Economics A Disequilibrium Macroeconometric Model for the Indian Economy Kaliappa Kalirajan, K. P. Kalirajan, Shashanka Bhide, 2003 This book presents a new approach to incorporating regional details on production in a disequilibrium macroeconometric model The early studies on disequilibrium dealt with either partial adjustment models or models involving excess demand or supplies in markets This study delves further by considering a different type of disequilibrium model one in which econometric analysis makes use of the varying coefficients stochastic production frontier approach which permits estimation and analysis of production efficiencies of individual producers The diverse regional agricultural production conditions in India provide an appropriate basis for application of the methodology developed in this study by providing a perspective on regional implications of selected policy measures impacting on agriculture either directly or indirectly
