Perception: a Philosophical Symposium: Papers... Presented at a Colloquium... Organized by the Philosophy Department of the University of Lancaster and Held on 10-12 April 1970 lancaster Colloquium on perception (1970. s), 1971 **The Unity of Perception** Susanna Schellenberg, 2018-08-22 Perception is our key to the world It plays at least three different roles in our lives It justifies beliefs and provides us with knowledge of our environment It brings about conscious mental states It converts informational input such as light and sound waves into representations of invariant features in our environment Corresponding to these three roles there are at least three fundamental questions that have motivated the study of perception How does perception justify beliefs and yield knowledge of our environment How does perception bring about conscious mental states How does a perceptual system accomplish the feat of converting varying informational input into mental representations of invariant features in our environment This book presents a unified account of the phenomenological and epistemological role of perception that is informed by empirical research So it develops an account of perception that provides an answer to the first two questions while being sensitive to scientific accounts that address the third question The key idea is that perception is constituted by employing perceptual capacities for example the capacity to discriminate instances of red from instances of blue Perceptual content consciousness and evidence are each analyzed in terms of this basic property of perception Employing perceptual capacities constitutes phenomenal character as well as perceptual content The primacy of employing perceptual capacities in perception over their derivative employment in hallucination and illusion grounds the epistemic force of perceptual experience In this way the book provides a unified account of perceptual content consciousness and evidence **Philosophy as a Humanistic Discipline** Bernard

Williams, 2006 This is a collection of essays in metaphysics ethics and related branches of philosophy by Bernard Williams one of the greatest philosophers of the 20th century Most essays were previously unpublished or relatively inaccessible All of them are written with his distinctive rigour imagination and depth

Conference Proceedings of The Philosophy of Computer Games 2008 Stephan Günzel, Michael Liebe, Dieter Mersch, 2008

The Ontology of Perceptual Experience Sebastián Sanhueza Rodríguez, 2022-08-23 Contemporary philosophy of perception typically focuses on discussions concerning the content and the phenomenology of perceptual experience In a significant departure from this tradition The Ontology of Perceptual Experience explores the very conscious phenomena to which intentional or phenomenal features are thus ascribed Drawing on a new wave of research including the work of maverick philosophers like Helen Steward Brian O Shaughnessy and Matthew Soteriou this book examines two ways of categorizing perceptual experiences in accordance to their dynamic structure on the one hand Experiential Heracliteanism an approach striving to describe perceptual experiences in terms of irreducibly dynamic components and on the other Experiential Non Heracliteanism which conceives perceptual experiences as dynamic phenomena that may nevertheless be described in terms of non dynamic elements Sebastián Sanhueza Rodríguez describes both proposals and makes a modest case on behalf of the Non Heraclitean approach against its increasingly popular Heraclitean counterpart This case crucially turns on the fact that the Heracliteanist engages in a controversial and perhaps unnecessary commitment to irreducibly dynamic processes The ontological framework this book unpacks offers a platform from which traditional issues in the philosophies of mind and perception may be revisited in refreshing and potentially fruitful ways
