Sensory Robotics For The Handling Of Lim:

Sensory Robotics for the Handling of Limp Materials Paul M. Taylor, 2012-12-06 Limp materials are used in many economically important industries such as garment manufacture shoe manufacture aerospace composites and automobiles seats and trim The use of sensors is essential for reliable robotic handling of these materials which are often based on naturally occurring substances such as cotton and leather The materials are limp and have non homogeneous mechanical properties which are often impossible to predict accurately The applications are very demanding for vision and tactile sensing and signal processing adaptive control systems planning and systems integration This book comprises the collection of papers presented at the NATO Advanced Research Workshop on Sensory Robotics for the Handling of Limp Materials held in October 1988 at II Ciocco Tuscany Italy The aim of the workshop was to examine the state of the art and determine what research is needed to provide the theoretical and technological tools for the successful application of sensory robotics to the handling of limp materials The meeting also acted as the first ever forum for the interchange of knowledge between applications driven researchers and those researching into the provision of fundamental tools The participants were drawn from academia 20 industry 5 and other non university research organisations 5

Advancements in Knowledge Management Gyamfi, Albert, Williams, Idongesit, 2021-06-18 Knowledge management has always been about the process of creating sharing using and applying knowledge within and between organizations Before the advent of information systems knowledge management processes were manual or offline However the emergence and eventual evolution of information systems created the possibility for the gradual but slow automation of knowledge management processes These digital technologies enable data capture data storage data mining data analytics and data

visualization The value provided by such technologies is enhanced and distributed to organizations as well as customers using the digital technologies that enable interconnectivity Today the fine line between the technologies enabling the technology driven external pressures and data driven internal organizational pressures is blurred Therefore how technologies are combined to facilitate knowledge management processes is becoming less standardized This results in the question of how the current advancement in digital technologies affects knowledge management processes both within and outside organizations Digital Technology Advancements in Knowledge Management addresses how various new and emerging digital technologies can support knowledge management processes within organizations or outside organizations Case studies and practical tips based on research on the emerging possibilities for knowledge management using these technologies is discussed within the chapters of this book It both builds on the available literature in the field of knowledge management while providing for further research opportunities in this dynamic field This book highlights topics such as human robot interaction big data analytics software development keyword extraction and artificial intelligence and is ideal for technology developers academics researchers managers practitioners stakeholders and students who are interested in the adoption and implementation of new digital technologies for knowledge creation sharing aggregation and storage
