Edible Food Packaging with Natural Hydrocolloids and Active Agents Ahmet Yemenicioğlu,2022-11-03 The aim of this book is to show the potential of natural hydrocolloids and active agents to develop sustainable edible packaging materials for food preservation For this the current and future sources of natural hydrocolloids have been reviewed along with their extraction methods impact on health and ability to form different packaging such as film casing coating mat pad etc Similarly natural active compounds were evaluated carefully considering their sources extraction methods regulatory status and compatibility with edible packaging The book emphasizes the recent developments in methods strategies and technologies employed to enhance the performance of antimicrobial antioxidant and bioactive packaging The basic testing methods used to evaluate antimicrobial and antioxidant activity of edible packaging in model media and food were discussed and carefully selected example active edible packaging applications for different food categories were provided with critical details such as the thin balance between effectiveness of packaging and sensory properties of food As such it helps in understanding necessary parameters in designing an effective active edible packaging that is applicable to the target food category Moreover readers are primed for the first time on how to develop a fully natural antimicrobial antioxidant or bioactive edible food packaging

This book is different from most of the similar books avail as it provides neither methodologies about classical active packaging based on chemicals and fossil polymeric films nor is it a thorough collection of different food packaging applications. It is also not a book that concentrates on physicochemical characterization methods and engineering aspects of packaging. Instead, this is a book that provides systematic knowledge about key methods of evaluating natural resources, agro industrial wastes and by products for development of edible packaging and concentrates on concepts, strategies, technologies and applications of active edible packaging based solely on natural components. It is designed to share both positive and negative experiences in an emerging field that is expected to play a central role in improving food safety and quality, human health and environmentally friendly practices.

Microplastics Natalie Welden, 2024-04-26

Microplastics Transport Impacts: Monitoring and Mitigation provides a critical analysis of our current understanding of microplastic science, the methods by which microplastics are observed in the environment and our options for mitigation and remediation. Associated concern for the environment has resulted in substantial interest in the management and mitigation of these persistent and pervasive pollutants. Nevertheless, our progress towards reliable monitoring and successful management has been limited. The book is intended for those studying or working in the fields of

environmental science and waste management as well as associated areas and provides the holistic context needed to evaluate and interpret the outputs associated with the interlinked problems of plastic and microplastics In this manner the reader will be invited to explore the ongoing challenges which have thus far prevented the development of a thorough understanding of the risk posed by plastic and microplastic pollution to discuss the implications of ongoing uncertainty to effective plastic management evaluate the current strategies to control the ongoing proliferation of plastic pollution Models the issue of microplastic pollution with historic case studies of alternative pollutants Demonstrates the differing requirements of microplastic monitoring and management Contains idealized workflows specific to key practitioner groups the content of which will reflect recent debates and divergences in the field Emphasizes critical comparison between emerging management measures not apparent in current edited texts which tend to consider individual approaches separately Places management and remediation methods in the context of the observed scale and impact of associated microplastics in the environment to indicate the potential benefits of each approach
