

Macroeconomics Basics on Indian Economy

1. Understanding GDP as a Measure

Gross Domestic Product (GDP) represents the market value of all final goods and services produced within a country in a given period.

- **Market Value:** Captures the value of economic activities in a common currency.
- **Final Goods:** Intermediate goods are already included in final goods.
- **Domestic Production:** Only includes goods and services produced within the country.

GDP as an Indicator:

- Reflects economic well-being.
- Equates to total income and expenditure in the economy.
- Consists of consumption (C), investment (I), government expenditure (G), and net exports (X-M):

$$Y = C + I + G + (X - M)$$

2. Current vs. Constant Prices

Current Prices: Prices prevailing in the market at a given time.

Constant Prices: Prices adjusted to a base year's level to remove the effects of inflation (India's base year is 2011-12).

Nominal GDP: Value of goods and services at current prices.

Real GDP: Value of goods and services at constant prices, indicating actual economic growth.

Example:

- Yearly comparison of GDP at current and constant prices (2005-2024) shows the inflation gap.
- Growth rates calculated for both nominal and real GDP over the years.

3. Understanding Price Indices

Wholesale Price Index (WPI): Measures price changes of goods at the wholesale level.

Consumer Price Index (CPI): Measures price changes in a basket of goods and services consumed by households.

Producer Price Index (PPI): Measures price changes for goods as they leave the producer, excluding taxes, transport, and trade margins.

GDP Deflator: A ratio of nominal GDP to real GDP times 100, used to calculate inflation.
