Management Labor Technological Change:

Management of Technological Change E.G. Frankel, 2012-12-06 Technological change has been recognized as the major contributor to economic growth and has become one of the most important challenges to policy makers and managers. Many excellent books and papers have been written on the subject. Most of these deal with the macro or micro economic impact of technological change or the technological change process from invention and discovery to innovation development and final maturity as well as ultimate obsolescence of technology. This book is designed to present technological change as a decision process and explain the use of recently developed methods for the effective management of technological change. In particular, techniques for the effective choice among technological alternatives, timing of the introduction of new technology, both in terms of its own status and that of the technology to be replaced, if any, and the rate and method of introduction of new technology are presented. Management of technology is a complex decision process which is affected by both internal and external factors. The purpose of this book is to instruct the reader in effective technology decision making which involves the evaluation of the status of technology in use, if any, the problem to be solved or output to be obtained, determination of environmental and internal constraints, and the competitive environment or market conditions which affect the technology decisions.

Workers, Managers, and Technological Change Daniel B. Cornfield, 2013-11-11 Workers, Managers, and Technological Change Emerging Patterns of Labor Relations contributes significantly to an important subject. Technological change is one of the most powerful forces transforming the American industrial relations. In fact, the synergistic relationships between technology and industrial relations are so complex that they are not well or completely understood. We know that the impact of technology, while not independent of social forces, already has been profound. It has transformed occupations, creating new skills and destroying others, altered the power relationships between workers and managers, and changed the way workers learn and work. Technology also has made it possible to decentralize some economic activities out of large metropolitan areas and into small towns, rural areas, and other countries. Most important, information technology makes it possible for international corporations to operate on a global basis. Indeed, some international corporations, especially those based in the United States, are losing their national identities, detaching the welfare of corporations from that of particular workers and communities. Internationalization, facilitated by information technology, has transformed industrial relations systems. A major objective of the traditional American industrial relations system was to take labor out of competition.

Technological Change & Labour Relations Muneto Ozaki, 1992 A study which looks at the reciprocal influence of technological change and labour relations and includes case studies from six industrialized market economy countries as well as a comparative chapter. The book focuses on the introduction of microelectronic technology in machinery manufacturing, banking, and printing to examine how workers participated in the changeover and how labour relations in the enterprises studied were affected by the new technology.
