**Digital Image Processing in Medicine** K. H. Höhne, 2013-03-07 In diagnostic medicine a large part of information about the patient is drawn from data which more or less are represented in an optical pictorial form. There is a very wide range of such data as e.g. the patient's appearance, the various kinds of radiological images or cytological imagery. In conventional diagnostics the data as it comes from the acquisition device is perceived by the physician and is interpreted with the help of a large amount of a priori knowledge to give a diagnostic finding. During the last 15 years a steadily rising number of attempts have been made to support these processes by the application of computers. The attempts mainly concentrate on three objectives: 1. Support of the perception process by the production of better or new types of images e.g. by Computer tomography or Computer angiography; image processing; 2. Automation of the interpretation process e.g. for blood cell differentiation, pattern recognition; 3. Management of the steeply rising amount of medical image data in the hospital image data bases. Although the early applications of digital methods aimed at the second objective, in the last years much more success has been achieved in the support of the perception process by methods of image processing. The reason for this is obvious: in the case of automatic interpretation the a priori knowledge of the physician has to be formalized.

*Journal of Nuclear Medicine Technology*, 1980      **Nuclear Techniques in Diagnostic Medicine** Peter P. van Rijk, 2012-12-06 This book was conceived by Professor K. H. Ephraïm, the former director of the Institute for Nuclear Medicine of the University Hospital of Utrecht. Unfortunately, due to a serious illness, he was not able to finish the work he started. He is, however, very pleased to know that the book is nevertheless being published. In principle, the volume consists of two parts. The first is dedicated to basic science and technology in nuclear medicine. It provides the data which are necessary to a clear

understanding of the possibilities and limitations of investigations which make use of radioactive materials The second part of the book covers those disciplines in medicine in which nuclear medicine can be of help in solving certain clinical problems Each chapter can be read separately even without thorough knowledge of the first part of the book The contributors to this book come from both Europe and North America Each of them has written his chapter out of long standing personal interest in his particular field of nuclear medicine This book will be of value to a wide variety of professionals It is of interest not only to clinicians of various specialties but also to diagnostic professionals i e radiologists and nuclear medicine clinicians Last but not least it will be of use to physicians in training     *MANL NUCLEAR MEDN PROCEDURES* James E.
