Sentence Production Developments In Research And Theory:

Sentence Production S. Rosenberg, 1977-01-01 Cognition and Sentence Production S.N. Sridhar, 2012-12-06 The developments in linguistic theory over the last three decades have given us a better understanding of the formal properties of language. However, as the truism goes, language does not exist in a vacuum. It interacts with a cognitive system that involves much more than language and functions as the primary instrument of human communication. A theory of language must therefore be based on an integration of its formal properties with its cognitive and communicative dimensions. The present work is offered as the modest contribution to this research paradigm. This book is a revised and slightly enlarged version of my doctoral thesis submitted to the University of Illinois at Urbana Champaign. In writing the original version, I had the privilege of working with Professor Charles E. Osgood, who is widely recognized as the founder and one of the leading figures of modern psycholinguistics. I have benefited from extensive and stimulating discussions with him, not only on this topic but in the development of his theory of language performance in general. See his *Lectures on Language Performance* 1980 in this series. However, the responsibility for the particular formulations of the theory, hypotheses, interpretations, and conclusions found in this work, which have been influenced no doubt by my training as a linguist rather than as a psychologist, are my own.

Sentence Production Sheldon Rosenberg, 1977 *Sentence First, Arguments Afterward* Lila Gleitman, 2020-07-16 *Sentence First, Arguments Afterward* collects the important papers of Lila Gleitman, a pioneer of the field of cognitive science. The book explores language from the perspective of language acquisition, linguistic relativity, and the very nature of syntax and semantics. Gleitman reveals insights that are important both for their perspective on the history of the field and for current practice in the study of language and thought.

The Oxford Handbook of Psycholinguistics Shirley-Ann Rueschmeyer, M. Gareth Gaskell, 2018-09-06 The ability to communicate quickly and flexibly through both spoken and written language is one of the defining characteristics of the human race. Yet it remains a mysterious process. The science of psycholinguistics attempts to uncover the mechanisms and representations underlying human language. This interdisciplinary field has seen massive developments over the last decades, with a broad expansion of the research base and the incorporation of new experimental techniques such as brain imaging and computational modelling. The result is that real progress is being made in the understanding of the key components of language in the mind. This new and expanded edition of *The Oxford Handbook of Psycholinguistics* brings together the views of over 80 experts in various domains of psycholinguistic research, offering a comprehensive and authoritative review of the field. With contributions from the fields of psychology, linguistics, cognitive neuroscience, attention, genetics, development, and neuropsychology, divided into five themed sections, this new edition of *The Oxford Handbook of Psycholinguistics* is unparalleled in its breadth of coverage. The comprehensive nature of this book, coupled with the accessibility of the short chapter format, makes this handbook essential reading for students and researchers in the fields of psychology, linguistics, and neuroscience.

The Dynamic Interlanguage Miriam R.

Eisenstein,2013-06-29 Recent work in applied linguistics has expanded our understanding of the rule governed nature of language The concept of an idealized speaker hearer whose linguistic competence is abstract and separate from reality has been enriched by the notion of an actual interlocutor who possesses communicative competence a knowledge of language which accounts for its use in real world contexts Areas of variation previously relegated to idiosyncratic differences in performance have been found to be dynamic yet consistent and lend themselves to study and systematic description Because language acquisition involves the development of communicative competence by its very nature it incorporates variation and systematicity Second language acquisition is similarly variable since interlanguage is subject to the same universal and language specific conventions In addition aspects of the second language have been found to be unevenly acquired and are differentially reflected in particular contexts or settings Yet despite our expanding knowledge this variability is only beginning to be treated in much of the second language acquisition literature This volume presents the work of some researchers and methodologists who have taken on the challenge of including variation in their research designs and pedagogical recommendations Variation is shown to be relevant to linguistic social and psychological aspects of language It is apparent in the registers and dialects of the target language and in the interlanguage of learners Psycholinguistic Research (PLE: Psycholinguistics) Doris Aaronson,Robert Rieber,2013-11-20 Originally published in 1979 this book represents an effort to bring together the two disciplines at the core of psycholinguistics psychology and linguistics It discusses a broad variety of theoretical approaches to psycholinguistics as well as covering a wide range of topics At the time the book had four goals to discuss many of the important contemporary issues in psycholinguistics to explore the different views on major theoretical controversies to provide an analysis of background literature as a framework in which to evaluate the issues and controversies and to describe interesting high quality research currently being done by the authors and some of their colleagues Today it can be read and enjoyed in its historical context with many of the chapters still relevant in psycholinguistic research today Language Development: Syntax and semantics Stan A. Aspects of Automated Natural Language Generation Robert Dale,1992-03-25 This volume presents the proceedings of the Sixth International Workshop on Automated Natural Language Generation held in Castel Ivano Trento Italy April 5 7 1992 Besides an invited lecture by Nadia Magnenat Thalmann a well known researcher in computer animation on creating and visualizing speech and emotion the volume includes the 17 thoroughly reviewed papers accepted for presentation selected out of the submissions to the Workshop as well as 11 statements contributed to panels on multilinguality and generation or extending language generation to multiple media The accepted papers by leading researchers from Japan North America and Europe fall in sections on generator system architecture issues in realisation issues in discourse structure and beyond traditional generation **Regressions in Mental Development** Thomas G. Bever,2017-12-06 Science depends

on noticing that things which seem identical are different and conversely In psychology one cannot assume that apparently identical behaviours are due to identical mechanisms The work reported in this book involves the problem of classifying the true nature of behaviour as it appears during child development Originally published in 1982 the papers in this volume attempt to interpret explain or explain away developmental regressions in a variety of different areas In spring 1975 a group of scholars interested in such problems met for several days to discuss their individual findings and the underlying theoretical issues This volume reflects both the discussions at the original conference and succeeding years of thinking reading and writing

Handbook of Applied Psycholinguistics S. Rosenberg, 2014-02-04 First published in 1982 The chapters of this handbook contain critical integrative reviews of research and theory in the major areas of the field of applied psycholinguistics the field in which applied problems of language and communicative functioning and development are approached from the standpoint of basic research and theory in psycholinguistics and related areas of cognitive psychology The book was designed to meet the needs of researchers practitioners and graduate students from such disciplines as education including special education language learning linguistics neurology psychiatry psychology and speech and hearing for such reviews although the state of research in an area and a desire to stress research and theory in substantive areas resulted in a decision not to include chapters on the measurement of linguistic maturity language intervention the language of the learning disabled child language and environmental deprivation language and mania language and senile dementia and the design of written and oral information and computer command language

Computers in Language Research 2 Walter A. Sedelow, Sally Yeates Sedelow, 2011-06-03 TRENDS IN LINGUISTICS is a series of books that open new perspectives in our understanding of language The series publishes state of the art work on core areas of linguistics across theoretical frameworks as well as studies that provide new insights by building bridges to neighbouring fields such as neuroscience and cognitive science TRENDS IN LINGUISTICS considers itself a forum for cutting edge research based on solid empirical data on language in its various manifestations including sign languages It regards linguistic variation in its synchronic and diachronic dimensions as well as in its social contexts as important sources of insight for a better understanding of the design of linguistic systems and the ecology and evolution of language TRENDS IN LINGUISTICS publishes monographs and outstanding dissertations as well as edited volumes which provide the opportunity to address controversial topics from different empirical and theoretical viewpoints High quality standards are ensured through anonymous reviewing

Linguistic Structure in Language Processing G.N. Carlson, M.K. Tanenhaus, 2012-12-06 The papers in this volume are intended to exemplify the state of experimental psycholinguistics in the middle to later 1980s Our overriding impression is that the field has come a long way since the earlier work of the 1950s and 1960s and that the field has

emerged with a renewed strength from a difficult period in the 1970s Not only are the theoretical issues more sharply defined and integrated with existing issues from other domains modularity being one such example but the experimental techniques employed are much more sophisticated thanks to the work of numerous psychologists not necessarily interested in psycholinguistics and thanks to improving technologies unavailable a few years ago for instance eye trackers We selected papers that provide a coherent overall picture of existing techniques and issues The volume is organized much as one might organize an introductory linguistics course beginning with sound and working up to meaning Indeed the first paper Rebecca Treiman s begins with consideration of syllable structure a phonological consideration and the last Alan Garnham s exemplifies some work on the interpretation of pronouns a semantic matter In between are found works concentrating on morphemes lexical structures and syntax The cross section represented in this volume is by necessity incomplete since we focus only on experimental work directed at understanding how adults comprehend and produce language We do not include any works on language acquisition first or second

Katharina Morik,2012-12-06 *The Conceptual Basis of Language (RLE Linguistics A: General Linguistics)* David

McNeill,2014-01-10 In this volume the author deals explicitly and literally with the speech thought relationship Departing boldly from contemporary linguistic and psycholinguistic thinking the author offers us one of the truly serious efforts since Vygotsky to deal with this question A unifying theme is the organization of action and speech is seen as growing out of sensory motor representations that are simultaneously part of meaning and part of action

Language Acquisition and the Functional Category System Peter Jordens,2012-12-06 Research on spontaneous language acquisition both in children learning their mother tongue and in adults learning a second language has shown that language development proceeds in a stagewise manner Learner utterances are accounted for in terms of so called learner languages Learner languages of both children and adults are language systems that are initially rather simple The present monograph shows how these learner languages develop both in child L1 and in adult L2 Dutch At the initial stage of both L1 and L2 Dutch learner systems are lexical systems This means that utterance structure is determined by the lexical projection of a predicate argument structure while the functional properties of the target language are absent At some point in acquisition this lexical semantic system develops into a target like system With this target like system learners have reached a stage at which their language system has the morpho syntactic features to express the functional properties of finiteness and topicality Evidence of this is word order variation and the use of linguistic elements such as auxiliaries tense and agreement markers and determiners Looking at this process of language acquisition from a functional point of view the author focuses on questions such as the following What is the driving force behind the process that causes learners to give up a simple lexical semantic system in favour of a functional pragmatic one What is the added value of linguistic features such as the morpho syntactic properties of inflection word order variation and definiteness

The Psychology of Written Composition Carl Bereiter,Marlene

Scardamalia, 2013-11-05 First Published in 1987 Part of a series on the psychology of education and instruction this volume marks a highpoint in the development on writing from a cognitive perspective It significantly expands the data base upon which our understanding of writing rests the book presents an original theory or at any rate the beginnings of a theory of writing and the development of writing skills emphasizing the control processes in writing **Message Production** John O. Greene, 2013-11-05 The last two decades have seen the development of a number of models that have proven particularly important in advancing understanding of message production processes Now it appears that a second generation of theories is emerging one that reflects considerable conceptual advances over earlier models Message Production Advances in Communication Theory focuses on these new developments in theoretical approaches to verbal and nonverbal message production The chapters reflect a number of characteristics and trends resident in these theories including the nature and source of interaction goals the impact of physiological factors on message behavior the prominence accorded conceptions of goals and planning attempts to apply models of intra individual processes in illuminating inter individual phenomena treatments which involve hybrid intentional design stance approaches and efforts to incorporate physiological constructs and to meld them with psychological and social terms The processes underlying the production of verbal and nonverbal behaviors are exceedingly complex so much so that they resist the development of unified explanatory schemes The alternative is the mosaic of emerging theories such as are represented in this book each approach according prominence to certain message production phenomena while obscuring others and providing a window on some portion of the processes that give rise to those phenomena while remaining mute about other processes The amalgam of these disparate treatments then becomes the most intellectually compelling characterization of message production processes
