**Hazardous and Industrial Solid Waste Minimization Practices** Richard A. Conway, 1989 *Hazardous Materials and Waste Management* Nicholas P. Cheremisinoff, Paul N. Cheremisinoff, 1995-12-31 The management of hazardous materials and industrial wastes is complex requiring a high degree of knowledge over very broad technical and legal subject areas Hazardous wastes and materials are diverse with compositions and properties that not only vary significantly between industries but within industries and indeed within the complexity of single facilities Proper management not only requires an understanding of the numerous and complex regulations governing hazardous materials

and waste streams but an understanding and knowledge of the treatment post treatment and waste minimization technologies In fact today s environmental manager must face working within twelve environmental management arenas all of which may be applicable regardless of the size of the operation or business This volume has been written as a desk reference for the Professional Hazards Manager PHM The PHM is a qualified environmental manager that has the responsibility of ensuring that his or her facility or division within the corporation is in compliance with environmental statutes and regulations as well as participating in the selection of technologies and approaches to remediation pollution control and in implementing waste minimization practices These decisions require knowledge and understanding of the federal state and local environmental regulations a working knowledge of the best available technologies and their associated cost This volume provides an overview of both the technology and compliance requirements that will assist environmental managers in addressing facility management of hazardous wastes pollution control and waste minimization The book has been designed in part as a study guide to help prepare qualified individuals for the national certification and registration program of Professional Hazards Managers conducted by the National Association of Safety Health Professionals and other organizations including the Hazard Materials Control Resources Institute HMCRI and Fairleigh Dickinson University

Khankhasayev, 1999-02-28 Separation technologies are of crucial importance to the goal of significantly reducing the volume of high level nuclear waste thereby reducing the long term health risks to mankind International co operation including the sharing of concepts and methods as well as technology transfer is essential in accelerating research and development in the field The writers of this book are all internationally recognised experts in the field of separation technology well qualified to assess and criticize the current state of separation research as well as to identify future opportunities for the application of separation technologies to the solution of nuclear waste management problems The major emphases in the book are research opportunities in the utilization of innovative and potentially more efficient and cost effective processes for waste processing treatment actinide speciation separation methods technological processing and environmental restoration

*Resource Recovery and Reuse in Organic Solid Waste Management* Piet Lens, B. Hamelers, H. Hoitink, W. Bidlingmaier, 2004-03-01 Uncontrolled spreading of waste materials leads to health problems and environmental damage To prevent these problems a waste management infrastructure has been set to collect and dispose of the waste based on a hierarchy of three principles waste prevention recycling reuse and final disposal Final disposal is the least desirable as it causes massive emissions to the atmosphere water bodies and the subsoil The emission of methane to the atmosphere is an important source of greenhouse gasses Organic waste therefore gets a lot of attention in waste management which for Europe can be illustrated by the issue of the Landfill Directive 99/31/EC and the Sewage Sludge Directive 86/278/EEC Proper treatment of organic waste may however turn this burden into an asset In particular biological treatment may help in developing more effective resource management and sustainable development The following advantages may be listed The greenhouse effect is tackled as methane emissions from landfilling are prevented Soil quality can be restored or enhanced by the use of compost in agriculture Compost may replace peat in horticulture and home gardening reducing greenhouse emissions and wetland exploitation Anaerobic digestion has the additional benefit of producing biogas that may be used as a fuel Pesticide use can be reduced by proper use of the disease suppressive properties of compost

*Resource Recovery and Reuse in Organic Solid Waste Management* disseminates at advanced scientific level the

potential of environmental biotechnology for the recovery and reuse of products from solid waste Several options to recover energy out of organic solid waste from domestic agricultural and industrial origin are presented and discussed and existing economically feasible treatment systems that produce energy out of solid waste and recover useful by products in the form of fertiliser or soil conditioner are demonstrated The potential of environmental biotechnology is highlighted from different perspectives societal technological and practical
