Intermediate C Programming Yung-Hsiang Lu,George K. Thiruvathukal,2024-02-06 Revised for a new second edition Intermediate C Programming provides a stepping stone for intermediate level students to go from writing short programs to writing real programs well It shows students how to identify and eliminate bugs write clean code share code with others and use standard Linux based tools such as ddd and valgrind This second edition provides expanded coverage of these topics with new material focused on software engineering including version control and unit testing The text enhances their programming skills by explaining programming concepts and comparing common mistakes with correct programs It also discusses how to use debuggers and the strategies for debugging as well as studies the connection between programming and discrete mathematics Including additional student and instructor resources available online this book is particularly appealing as a classroom resource

Parallel Inference Engine Hidehiko Tanaka,2000 This text describes the

machine model designed to support parallel interface the design of the Klong language the design and implementation of the parallel interface engine the programming tools the runtime system and some evaluation results The architecture of the PIE 64 is tuned specially to support parallel inference The compiler and runtime systems proposed here are designed to reduce the overhead that inevitably incurs when using fine granularity processing

Parallel Processing for Artificial Intelligence 2 V. Kumar, H. Kitano, C.B. Suttner, 2014-06-28 With the increasing availability of parallel machines and the raising of interest in large scale and real world applications research on parallel processing for Artificial Intelligence AI is gaining greater importance in the computer science environment Many applications have been implemented and delivered but the field is still considered to be in its infancy This book assembles diverse aspects of research in the area providing an overview of the current state of technology It also aims to promote further growth across the discipline Contributions have been grouped according to their subject architectures 3 papers languages 4 papers general algorithms 6 papers and applications 5 papers The internationally sourced papers range from purely theoretical work simulation studies algorithm and architecture proposals to implemented systems and their experimental evaluation Since the book is a second volume in the parallel processing for AI series it provides a continued documentation of the research and advances made in the field The editors hope that it will inspire readers to investigate the possibilities for enhancing AI systems by parallel processing and to make new discoveries of their own

Parallel Processing for Artificial Intelligence 1 L.N. Kanal, H. Kitano, V. Kumar, C.B. Suttner, 2014-06-28 Parallel processing for AI problems is of great current interest because of its potential for alleviating the computational demands of AI procedures The articles in this book consider parallel processing for problems in several areas of artificial intelligence image processing knowledge representation in semantic networks production rules mechanization of logic constraint satisfaction parsing of natural language data filtering and data mining The publication is divided into six sections The first addresses parallel computing for processing and understanding images The second discusses parallel processing for semantic networks which are widely used means for representing knowledge methods which enable efficient and flexible processing of semantic networks are expected to have high utility for building large scale knowledge based systems The third section explores the automatic parallel execution of production systems which are used extensively in building rule based expert systems systems containing large numbers of rules are slow to execute and can significantly benefit from automatic parallel execution The exploitation of parallelism for the mechanization of logic is dealt with in the fourth section While sequential control aspects pose problems for the

parallelization of production systems logic has a purely declarative interpretation which does not demand a particular evaluation strategy In this area therefore very large search spaces provide significant potential for parallelism In particular this is true for automated theorem proving The fifth section considers the problem of constraint satisfaction which is a useful abstraction of a number of important problems in AI and other fields of computer science It also discusses the technique of consistent labeling as a preprocessing step in the constraint satisfaction problem Section VI consists of two articles each on a different important topic The first discusses parallel formulation for the Tree Adjoining Grammar TAG which is a powerful formalism for describing natural languages The second examines the suitability of a parallel programming paradigm called Linda for solving problems in artificial intelligence Each of the areas discussed in the book holds many open problems but it is believed that parallel processing will form a key ingredient in achieving at least partial solutions It is hoped that the contributions sourced from experts around the world will inspire readers to take on these challenging areas of inquiry

Pardalos,Mauricio G. C. Resende,K. G. Ramakrishnan,1995-01-01 This book contains papers presented at the Workshop on Parallel Processing of Discrete Optimization Problems held at DIMACS in April 1994 The contents cover a wide spectrum of the most recent algorithms and applications in parallel processing of discrete optimization and related problems Topics include parallel branch and bound algorithms scalability load balancing parallelism and irregular data structures and scheduling task graphs on parallel machines Applications include parallel algorithms for solving satisfiability problems location problems linear programming quadratic and linear assignment problems This book would be suitable as a textbook in advanced courses on parallel algorithms and combinatorial optimization **Computation & Cognition** Charles William Gear,1991-01-01 The theme of the symposium computation and cognition was designed to explore the relations between very different modes of computation and to bring together views of the computation process from different disciplines **Energy Research Abstracts** ,1990 **Scientific Information Bulletin** ,1991 Parallel Processing for Artificial Intelligence 3 J.

Geller,H. Kitano,C.B. Suttner,1997-02-10 The third in an informal series of books about parallel processing for Artificial Intelligence this volume is based on the assumption that the computational demands of many AI tasks can be better served by parallel architectures than by the currently popular workstations However no assumption is made about the kind of parallelism to be used Transputers Connection Machines farms of workstations Cellular Neural Networks Crays and other hardware paradigms of parallelism are used by the authors of this collection The papers arise from the areas of parallel

knowledge representation neural modeling parallel non monotonic reasoning search and partitioning constraint satisfaction theorem proving parallel decision trees parallel programming languages and low level computer vision The final paper is an experience report about applications of massive parallelism which can be said to capture the spirit of a whole period of computing history This volume provides the reader with a snapshot of the state of the art in Parallel Processing for Artificial Intelligence
