in architecture has existed in New York for over fifty years While other styles have come and gone the simple perfect expression of space and form that minimalism affords have perennially informed New York spaces residential commercial and public alike Now that people s attention is again focused not only on the New York skyline but also on the history and influence of Big Apple buildings the time is right for this homage that presents twenty two of the most representative minimalist projects in New York Each featured project not only includes exquisite photography but also brief reminiscences from each architect reflecting on the spirit of the city as revealed in their works A final discussion of New York s architectural icons rounds out the book New York Minimalism is a fascinating journey through recent history s most compelling examples of residential commercial and public architecture in New York a celebration of architectural achievement in the city that never sleeps

Minimalist Architecture Franco Bertoni,2002-08 Minimalism as a concept was first used in the world of art to characterize the work of Donald Judd Sol Le Witt and several others Soon afterwards this creative approach began to take hold in architecture and the works of many contemporary architects are rooted in Minimalism to a greater or lesser degree This publication goes to the heart of this trend looking first at Loos Wittgenstein Mies van der Rohe and Asplund the definitive precursors of Minimalism Then the works of today s protagonists who include Tadao Ando Luis Barragán Alberto Campo Baeza A G Fronzoni Michael Gabellini John Pawson Claudio Silvestrin Eduardo Souto Moura and Peter Zumthor are covered extensively A selection of texts contributed by the featured architects conclude the volume With a clear even austere presentation this book not only reflects its contents but provides a comprehensive overview of Minimalism one of the dominant trends in contemporary architecture

Minimal Architecture Ilka Ruby,Andreas Ruby,Angeli Sachs,Philip Ursprung,2003 What is minimalism Or more specifically what isn t In this fascinating aesthetic voyage three experts in the field of architecture and art history trace the development of minimalism as a style and offer perspectives on the directions the movement is taking as it morphs towards the future In double page spreads filled with color photographs of the most innovative minimalist projects this book illustrates three principal movements the traditional as practiced by Herzog the ambiguous in which architects not commonly associated with minimalism such as OMA or Zaha Hadid use it for specific projects and the subversive which appropriates minimalist concepts across a variety of new fields as exemplified in the architecture of Shigeru Ban or Lacaton Vassal

Colonial Architecture and Urbanism in Africa Fassil Demissie, 2016-12-05 Colonial architecture and urbanism carved its way through space ordering and classifying the built environment while projecting the authority of European powers across Africa in the name of science and progress The built urban fabric left by colonial powers attests to its lingering impacts in shaping the present and the future trajectory of postcolonial cities in Africa Colonial Architecture and Urbanism explores the intersection between architecture and urbanism as discursive cultural projects in Africa Like other colonial institutions such as the courts police prisons and schools that were crucial in establishing and maintaining political domination colonial architecture and urbanism played a pivotal role in shaping the spatial and social structures of African cities during the 19th and 20th centuries Indeed it is the cultural destination of colonial architecture and urbanism and the connection between them and colonialism that the volume seeks to critically address The contributions drawn from different interdisciplinary fields map the historical processes of colonial architecture and urbanism and bring into sharp focus the dynamic conditions in which colonial states officials architects planners medical doctors and missionaries mutually constructed a hierarchical and exclusionary built environment that served the wider colonial project in Africa

Art and architecture of the late 20th century Dorothea Eimert, 2024-11-12 During the second half of the twentieth century in a world transformed by international tensions the centre of artistic creation shifted from Europe to the United States In a world where major countries asserted their power individualism now ruled The art world was a perfect example of this phenomenon even now the emphasis of creativity is placed on the individual instead of the trend Moreover growing globalization and the various types of media have facilitated a multiplication of means and offered artists new possibilities Now at the dawn of the twenty first century everything has the potential to be art and art more than ever is the opportunity to take risks to present and transform almost anything This work invites the reader to discover the diversity of this most recent artistic environment

The Fractal Dimension of Architecture Michael J. Ostwald, Josephine Vaughan, 2016-09-01 Fractal analysis is a method for measuring analysing and comparing the formal or geometric properties of complex objects In this book it is used

to investigate eighty five buildings that have been designed by some of the twentieth century s most respected and celebrated architects Including designs by Le Corbusier Eileen Gray Frank Lloyd Wright Robert Venturi Frank Gehry Peter Eisenman Richard Meier and Kazuyo Sejima amongst others this book uses mathematics to analyse arguments and theories about some of the world s most famous designs Starting with 625 reconstructed architectural plans and elevations and including more than 200 specially prepared views of famous buildings this book presents the results of the largest mathematical study ever undertaken into architectural design and the largest single application of fractal analysis presented in any field The data derived from this study is used to test three overarching hypotheses about social stylistic and personal trends in design along with five celebrated arguments about twentieth century architecture Through this process the book offers a unique mathematical insight into the history and theory of design

Minimalism Hartmut Obendorf,2009-06-12 The notion of Minimalism is proposed as a theoretical tool supporting a more differentiated understanding of reduction and thus forms a standpoint that allows definition of aspects of simplicity Possible uses of the notion of minimalism in the field of human computer interaction design are examined both from a theoretical and empirical viewpoint giving a range of results Minimalism defines a radical and potentially useful perspective for design analysis The empirical examples show that it has also proven to be a useful tool for generating and modifying concrete design techniques Divided into four parts this book traces the development of minimalism defines the four types of minimalism in interaction design looks at how to apply it and

finishes with some conclusions *Technological Innovation for the Internet of Things* Luis M. Camarinha-Matos, Slavisa Tomic, Paula Graca, 2013-04-15 This book constitutes the refereed proceedings of the 4th IFIP WG 5.5 SOCOLNET Doctoral Conference on Computing Electrical and Industrial Systems DoCEIS 2013 held in Costa de Caparica Portugal in April 2013. The 69 revised full papers were carefully reviewed and selected from numerous submissions. They cover a wide spectrum of topics ranging from collaborative enterprise networks to microelectronics. The papers are organized in the following topical sections: collaborative enterprise networks, service orientation, intelligent computational systems, computational systems applications, perceptual systems, robotics and manufacturing, embedded systems and Petri nets, control and decision, integration of power electronics systems with ICT, energy generation, energy distribution, energy transformation, optimization techniques in energy, telecommunications, electronics devices design, electronics amplifiers, electronics RF applications and electronics applications **Beauty in Architecture** Nele De Raedt, Maarten

Delbeke, 2025-09-18 Beauty in Architecture brings together the views of architects, artists, critics, historians and philosophers to explore how beauty can again become an integral part of discussions about architecture. Despite its recent resurgence in the public debate about the built environment, the notion of beauty remains problematic and contested in critical discourse about architecture. When the topic is addressed, it is either treated with suspicion, historicized or contextualised or substituted with other, often equally problematic terms such as order, legibility, atmosphere or character. This collection brings together voices from theory, scholarship and practice to show that a conversation about beauty in architecture is necessary not only because the general public speaks easily and frequently about beauty in architecture but also because much can be gained from taking it seriously. Bringing together a diverse range of perspectives, the essays reflect on the themes, categories and concepts that should be part of such a conversation and show how talking about beauty engages important reflections on its ontology and what it involves: values, communities, collectives and shared histories, environment, identity and political or legal mechanisms and institutions. A must read for designers and theorists alike, this volume allows readers to discover new strategies and concepts to foster the discussion of beauty in architecture **Visual Merchandising** Louisa

Iarocci, 2017-07-05 Situated at the crossroads of visual culture and consumerism, this essay collection examines visual merchandising as both a business and an art. It seeks to challenge that scholarly ambivalence that often celebrates the spectacle but denies the agenda of consumerism. The volume considers strategies in the imaging of selling from the mid nineteenth century to the present in terms of the visual interaction that occurs between the commodity and the consumer and between body and space. Under the categories of Promotion, Product and Place, contributors to the volume examine the strategies in the presentation of retail goods and environments that range from print advertising to product design to store display and architecture. Visual Merchandising: The Image of Selling is located directly at the nexus of business practice and cultural myth where the spectator never loses sight of their status as buyer and the object of desire is always still a
