Mathematical Study of Degenerate Boundary Layers: A Large Scale Ocean Circulation Problem Anne-Laure Dalibard, Laure Saint-Raymond, 2018-05-29 This paper is concerned with a complete asymptotic analysis as $\epsilon \rightarrow 0$ of the Munk equation $\partial_x \psi + \epsilon \Delta \psi = \tau$ in a domain $\Omega \subset \mathbb{R}^2$ supplemented with boundary conditions for ψ and $\partial_n \psi$. This equation is a simple model for the circulation of currents in closed basins the variables x and y being respectively the longitude and the latitude. A crude analysis shows that as $\epsilon \rightarrow 0$ the weak limit of ψ satisfies the so called Sverdrup transport equation inside the domain namely $\partial_x \psi = 0$ while boundary layers appear in the vicinity of the boundary.

Mathematical Models and Methods for Planet Earth Alessandra Celletti, Ugo Locatelli, Tommaso Ruggeri, Elisabetta Strickland, 2014-03-05 In 2013 several scientific activities have been devoted to mathematical researches for the study of planet Earth. The current volume presents a selection of the highly topical issues presented at the workshop Mathematical Models and Methods for Planet Earth held in Roma Italy in May 2013. The fields of interest span from impacts of dangerous asteroids to the safeguard from space debris from climatic changes to monitoring geological events from the study of tumor growth to sociological problems. In all these fields the mathematical studies play a relevant role as a tool for the analysis of specific topics and as an ingredient of multidisciplinary problems. To investigate these problems we will see many different mathematical tools at work just to mention some stochastic processes PDE normal forms chaos theory
