On The Nature Of Representation A Case Study Of James Gibsons Theory Of Perception:

On the Nature of Representation Mark H. Bickhard, D. Michael Richie, 1983-01-01 Theory and Applications of Ontology: Philosophical Perspectives Roberto Poli, Johanna Seibt, 2010-08-28 Ontology was once understood to be the philosophical inquiry into the structure of reality the analysis and categorization of what there is Recently however a field called ontology has become part of the rapidly growing research industry in information technology The two fields have more in common than just their name Theory and Applications of Ontology is a two volume anthology that aims to further an informed discussion about the relationship between ontology in philosophy and ontology in information technology It fills an important lacuna in cutting edge research on ontology in both fields supplying stage setting overview articles on history and method presenting directions of current research in either field and highlighting areas of productive interdisciplinary contact Theory and Applications of Ontology Philosophical Perspectives presents ontology in philosophy in ways that computer scientists are not likely to find elsewhere The volume offers an overview of current research traditions in ontology contrasting analytical phenomenological and hermeneutic approaches It introduces the reader to current philosophical research on those categories of everyday and scientific reasoning that are most relevant to present and future research in information technology Vygotsky's Psychology-Philosophy Dorothy Robbins, 2012-12-06 You hold in your hands a new book Professor Dorothy Robbins dedicated it to one of the aspects of the cultural heritage of the famous psychologist L S Vygotsky His activity deyatelnost was multifaceted He had input into different fields of psychology its methodology psychology of art pathopsychology the psychology of child and adolescent development pedagogical psychology general psychology speech psychology and other fields Within his various activities he enriched not only psychology but a variety of different sciences academics pedagogics defectology psychiatry literary critical theory and linguistics Some famous scientists feel that he left his mark in fields of various scientific areas that did not exist during his lifetime such as psycholinguistics semiotics and cybernetics Many psychologists and linguists conduct research in the spirit of his ideas that are contained within his approach of cultural historical theory of human psychological development all created by Vygotsky as early as the 1920s and 1930s these ideas have become popular among scientists in different countries in the last decades The use of Vygotsky's theories even beyond the frame of psychology turns out to be fruitful I hope that this new book by Dorothy Robbins will help readers understand the deeper meaning of the scientific academic research undertaken by my father and the scientific results that were obtained by him **Foundational Issues in Artificial Intelligence and Cognitive Science** Mark H. Bickhard, L. Terveen, 1996-10-04 The book focuses on a conceptual flaw in contemporary artificial intelligence and cognitive science Many people have discovered diverse manifestations and facets of this flaw but the central conceptual impasse is at best only partially perceived Its consequences nevertheless visit themselves as distortions and failures of multiple research projects and make impossible the ultimate aspirations of the fields The impasse concerns a

presupposition concerning the nature of representation that all representation has the nature of encodings encodingism Encodings certainly exist but encodingism is at root logically incoherent any programmatic research predicted on it is doomed too distortion and ultimate failure The impasse and its consequences and steps away from that impasse are explored in a large number of projects and approaches These include SOAR CYC PDP situated cognition subsumption architecture robotics and the frame problems a general survey of the current research in AI and Cognitive Science emerges Interactivism an alternative model of representation is proposed and examined

Reason, Regulation, and Realism Clifford Alan

Hooker, 1995-01-01 This book develops a new naturalist theory of reason and scientific knowledge from a synthesis of philosophy and the new sciences of complex adaptive systems In particular the theory of partially self organizing regulatory systems is now emerging as central to all the life and social sciences and this book shows how these ideas can be used to illuminate and satisfyingly reconstruct our basic philosophical concepts and principles Evolutionary epistemology provides a unifying subject for the book It is taken as proposing some important commonality between cognitive biological and cognitive epistemic processes Here that commonality is found by embedding both in a common model of complex adaptive system dynamics New reconstructions are offered on the theories of Jean Piaget Karl Popper and Nicholas Rescher which show how their ideas are more deeply illuminated from this perspective in contrast to the formal rationalist interpretations standard among philosophers and scientists

Representation and Reality in Humans, Other Living Organisms and Intelligent Machines Gordana Dodig-Crnkovic, Raffaella Giovagnoli, 2017-08-29

This book enriches our views on representation and deepens our understanding of its different aspects It arises out of several years of dialog between the editors and the authors an interdisciplinary team of highly experienced researchers and it reflects the best contemporary view of representation and reality in humans other living beings and intelligent machines Structured into parts on the cognitive computational natural sciences philosophical logical and machine perspectives a theme of the field and the book is building and presenting networks and the editors hope that the contributed chapters will spur understanding and collaboration between researchers in domains such as computer science philosophy logic systems theory engineering psychology sociology anthropology neuroscience linguistics and synthetic biology

Art as Organism Charissa N.

Terranova, 2015-10-10 What if modernism had been characterised by evolving interconnected and multi sensory images rather than by the monolithic objects often described by its artists and theorists In this groundbreaking book Charissa Terranova unearths a forgotten narrative of modernism which charts the influence that biology General Systems Theory and cybernetics had on art in the twentieth century From kinetic and interactive art to early computer art and installations spanning an entire city she shows that the digital image was a rich and expansive artistic medium of modernism

Routledge International Handbook of Theoretical and Philosophical Psychology Brent D. Slife, Stephen C.

Yanchar, Frank C. Richardson, 2021-12-28 Routledge International Handbook of Theoretical and Philosophical Psychology is a

compilation of works by leading scholars in theoretical and philosophical psychology that offers critical analyses of and alternatives to current theories and philosophies typically taken for granted in mainstream psychology Within their chapters the expert authors briefly describe accepted theories and philosophies before explaining their problems and exploring fresh new ideas for practice and research These alternative ideas offer thought provoking ways of reinterpreting many aspects of human existence often studied by psychologists Organized into five sections the volume covers the discipline of psychology in general various subdisciplines e g positive psychology and human development concepts of self and identity as well as research and practice Together the chapters present a set of alternative ideas that have the potential to take the field of psychology in fruitful directions not anticipated in more traditional theory and research This handbook will be a valuable resource for students and scholars of the theory assumptions and history of psychology

Virtual Reality Tatjana Crossley, 2025-09-30 This book investigates how immersive environments across architecture art and media shape spatial perception cultural identity and the construction of reality It offers a spatial psychoanalytical reading of virtual reality VR examining how architecture and representation engage with the body sensorial experience and subjectivity Redefining VR as an experiential and spatial condition rather than simply a digital construct the book traces its lineage from ancient fresco rooms to contemporary digital landscapes Grounded in theoretical frameworks from psychoanalysis phenomenology and media theory it explores how immersive environments function as extensions of the body and reflect a collective identity Case studies from Pompeii to the Metaverse illustrate how architecture and representation shape our virtual experience Rather than viewing VR as a new phenomenon the book positions it as part of a longer trajectory in design and representation shaped by evolving tools and technologies It argues that the virtual spaces we create and the artifacts we choose to represent encode insights about identity memory and social conditions This book is written for theorists practitioners academics and students of architecture art and design It situates architectural practice within the unfolding discourse on virtuality identity and the cultural implications of space making

Ludwig Wittgenstein Stuart Shanker, David Kilfoyle, 2002 Wittgenstein scholarship has continued to grow at a pace few could have anticipated a testament both to the fertility of his thought and to the thriving state of contemporary philosophy In response to this ever growing interest in the field we are delighted to announce the publication of a second series of critical assessments on Wittgenstein emphasising both the breadth and depth of contemporary Wittgenstein research As well as papers on the nature and method of Wittgenstein's philosophy this second collection also relates to a broader range of topics including psychology politics art music and culture

Architectures for Intelligence Kurt Van Lehn, 2014-01-14 This unique volume focuses on computing systems that exhibit intelligent behavior As such it discusses research aimed at building a computer that has the same cognitive architecture as the mind permitting evaluations of it as a model of the mind and allowing for comparisons between computer performance and experimental data on human performance It also examines architectures that permit large complex

computations to be performed and questions whether the computer so structured can handle these difficult tasks intelligently

Education and Technology David W. Kritter, Lucien T. Winegar, 2007-01-01 There are numerous publications about education and technology What is missing is a balanced appraisal of the values and cognitive skills technology promotes and those it devalues This is important for education because the way we teach influences how children think and it is of more general importance for the evolution of society If we wait until these issues are definitively resolved and have noticeable societal effects it will inevitably be too late Hence the need for informed debate now **Reductionism and the**

Development of Knowledge Terrance Brown, Leslie Smith, 2003-01-30 Among the many conceits of modern thought is the idea that philosophy tainted as it is by subjective evaluation is a shaky guide for human affairs People it is argued are better off if they base their conduct either on know how with its pragmatic criterion of truth i e possibility or on science with its universal criterion of rational necessity Since Helmholtz there has been increasing concern in the life sciences about the role of reductionism in the construction of knowledge Is psychophysics really possible Are biological phenomena just the deducible results of chemical phenomena And if life can be reduced to molecular mechanisms only where do these miraculous molecules come from and how do they work On a psychological level people wonder whether psychological phenomena result simply from genetically hardwired structures in the brain or whether even if not genetically determined they can be identified with the biochemical processes of that organ In sociology identical questions arise If physical or chemical reduction is not practicable should we think in terms of other forms of reduction say the reduction of psychological to sociological phenomena or in terms of what Piaget has called the reduction of the lower to the higher e g teleology All in all then reductionism in both naive and sophisticated forms permeates all of human thought and may at least in certain cases be necessary to it If so what exactly are those cases The papers collected in this volume are all derived from the 29th Annual Symposium of the Jean Piaget Society The intent of the volume is to examine the issue of reductionism on the theoretical level in several sciences including biology psychology and sociology A complementary intent is to examine it from the point of view of the practical effects of reductionistic doctrine on daily life **Language, Logic, and Computation** Alexandra

Silva, Sam Staton, Peter Sutton, Carla Umbach, 2019-07-03 This book constitutes the refereed proceedings of the 12th International Tbilisi Symposium on Logic Language and Computation TbiLLC 2017 held in Lagodekhi Georgia in September 2017 The volume contains 17 full revised papers presented at the conference from 22 submissions The aim of this conference series is to bring together researchers from a wide variety of fields in Natural language syntax Linguistic typology Language evolution Logics for artificial intelligence and much more **The Psychology of Personhood** Jack Martin, Mark H.

Bickhard, 2012-11-29 What is a person Surprisingly little attention is given to this question in psychology For much of the past century psychology has tended to focus on the systematic study of processes rather than on the persons who enact and embody them In contrast to the reductionist picture of much mainstream theorising which construes persons as their mental

lives behaviours or neurophysiological particulars The Psychology of Personhood presents persons as irreducibly embodied and socially situated beings Placing the study of persons at the centre of psychology this book presents novel insights on the typical everyday actions and experiences of persons in relation to each other and to the broader society and culture Leading scholars from diverse academic disciplines paint an integrative portrait of the psychological person within evolutionary historical cultural developmental and everyday contexts The Ecological Brain Luis H. Favela,2023-12-22 The Ecological Brain is the first book of its kind using complexity science to integrate the seemingly disparate fields of ecological psychology and neuroscience The book develops a unique framework for unifying investigations and explanations of mind that span brain body and environment the NeuroEcological Nexus Theory NExT Beginning with an introduction to the history of the fields the author provides an assessment of why ecological psychology and neuroscience are commonly viewed as irreconcilable methods for investigating and explaining cognition intelligent behavior and the systems that realize them The book then progresses to its central aim presenting a unified investigative and explanatory framework offering concepts methods and theories applicable across neural and ecological scales of investigation By combining the core principles of ecological psychology neural population dynamics and synergetics under a unified complexity science approach NExT offers a compressive investigative framework to explain and understand neural bodily and environmental contributions to perception action and other forms of intelligent behavior and thought The book progresses the conversation around the role of brains in ecological psychology as well as bodies and environments in neuroscience It is essential reading for all students of ecological psychology perception cognitive sciences and neuroscience as well as anyone interested in the history and philosophy of the brain mind sciences and their state of the art methods and theories Two Sciences of Mind Seán Ó Nualláin,Paul Mc Kevitt,Eoghan Mac Aogáin,1997-06-26 The Reaching for Mind workshop held at AISB 95 explicitly addressed itself to the current crisis in Cognitive Science In particular the issue of how this discipline can address consciousness was a leitmotiv in the workshop The conclusion seems inescapable that there is a need for two sciences in this area Cognitive Science can be freed to become a fully fledged experimental epistemology by the creation of a science of consciousness also encompassing subjectivity This exciting collection of papers indicates where both these sciences may be heading Series B The programme committee of the workshop included Mike Brady Oxford Daniel Dennett Tufts Jerry Feldman Berkeley John Macnamara McGill and Zenon Pylyshyn Rutgers *Embodiment, Enaction, and Culture* Christoph Durt,Thomas Fuchs,Christian Tewes,2023-09-19 The first interdisciplinary investigation of the cultural context of enactive embodiment offering perspectives that range from the neurophilosophical to the anthropological Recent accounts of cognition attempt to overcome the limitations of traditional cognitive science by reconceiving cognition as enactive and the cognizer as an embodied being who is embedded in biological psychological and cultural contexts Cultural forms of sense making constitute the shared world which in turn is the origin and place of cognition This volume is the first interdisciplinary collection on the

cultural context of embodiment offering perspectives that range from the neurophilosophical to the anthropological The book brings together new contributions by some of the most renowned scholars in the field and the latest results from up and coming researchers The contributors explore conceptual foundations drawing on work by Husserl Merleau Ponty and Sartre and respond to recent critiques They consider whether there is something in the self that precedes intersubjectivity and inquire into the relation between culture and consciousness the nature of shared meaning and social understanding the social dimension of shame and the nature of joint affordances They apply the notion of radical enactive cognition to evolutionary anthropology and examine the concept of the body in relation to culture in light of studies in such fields as phenomenology cognitive neuroscience psychology and psychopathology Through such investigations the book breaks ground for the study of the interplay of embodiment enaction and culture Contributors Mark Bickhard Ingar Brinck Anna Ciaunica Hanne De Jaegher Nicolas de Warren Ezequiel Di Paolo Christoph Durt John Z Elias Joerg Fingerhut Aikaterini Fotopoulou Thomas Fuchs Shaun Gallagher Vittorio Gallese Duilio Garofoli Katrin Heimann Peter Henningsen Daniel D Hutto Laurence J Kirmayer Alba Montes Sanchez Dermot Moran Maxwell J D Ramstead Matthew Ratcliffe Vasudevi Reddy Zuzanna Ruci ska Alessandro Salice Glenda Satne Heribert Sattel Christian Tewes Dan Zahavi

Sociable Robots and the Future of Social Relations J. Seibt, M. Nørskov, R. Hakli, 2014-12-18 The robotics industry is growing rapidly and to a large extent the development of this market sector is due to the area of social robotics the production of robots that are designed to enter the space of human social interaction both physically and semantically Since social robots present a new type of social agent they have been aptly classified as a disruptive technology i e the sort of technology which affects the core of our current social practices and might lead to profound cultural and social change Due to its disruptive and innovative potential social robotics raises not only questions about utility ethics and legal aspects but calls for robo philosophy the comprehensive philosophical reflection from the perspectives of all philosophical disciplines This book presents the proceedings of the first conference in this new area Robo Philosophy 2014 Sociable Robots and the Future of Social Relations held in Aarhus Denmark in August 2014 The short papers and abstracts collected here address questions of social robotics from the perspectives of philosophy of mind social ontology ethics meta ethics political philosophy aesthetics intercultural philosophy and metaphilosophy Social robotics is still in its early stages but it is precisely now that we need to reflect its possible cultural repercussions This book is accessible to a wide readership and will be of interest to everyone involved in the development and use of social robotics applications from social roboticists to policy makers

Representation in Mind Hugh Clapin, Phillip Staines, Peter Slezak, 2004-06-04 Representation in Mind is the first book in the new series Perspectives on Cognitive Science and includes well known contributors in the areas of philosophy of mind psychology and cognitive science The papers in this volume offer new ideas fresh approaches and new criticisms of old ideas The papers deal in new ways with fundamental questions concerning the problem of mental representation that one contributor Robert Cummins has

described as THE problem in philosophy of mind for some time now The editors introductory overview considers the problem for which mental representation has been seen as an answer sketching an influential framework outlining some of the issues addressed and then providing an overview of the papers Issues include the relation between mental representation and public non mental representation misrepresentation the role of mental representations in intelligent action the relation between representation and consciousness the relation between folk psychology and explanations invoking mental representations
