Reconsidering Science Learning:

Reconsidering Science Learning Patricia Murphy, Eileen Scanlon, Jeff Thomas, Elizabeth Whitelegg, 2003-12-16 This informative book looks at science learning in a wide range of contexts. It is divided into three parts. Part one deals with the arguments put forward for studying science and includes a discussion on what science learners need to know about the nature of science and how decisions about what forms science curricula are made. Part two includes articles on the processes by which science is learned and part three deals with inclusivity and diversity in science learning and what widening participation means for science education. This is a companion book to *Mediating Science Learning through ICT* also published by RoutledgeFalmer. *Reconsidering Science Learning* will be of particular interest to teachers on masters courses in science education and academics with an interest in science education.

Reconsidering Conceptual Change: Issues in Theory and Practice Margarita Limón, L. Mason, 2007-05-08 The chapters in this volume derive from a symposium held in Madrid Spain from 6-8 November 1998. Organized and supported by the Autonomous University of Madrid, the meeting was part of the activities of the Special Interest Group SIG on Conceptual Change of the European Association for Research on Learning and Instruction EARLI coordinated by the editors of this book. The volume brings together contributions from leading researchers investigating the role of conceptual change to enhance meaningful learning in the classroom. The aim of the volume is to present the state of the art on a topic that has become very relevant to explaining how students and people in general build their knowledge and incorporate new concepts and ideas. The volume keeps the four main sessions in which the symposium was articulated. They were structured around both theoretical and practical issues of conceptual change. Particular attention was paid to discussing the characteristics of individuals' prior knowledge and to the more recent topic of how to integrate social motivational and contextual aspects of learning within conceptual change research. Parts 1 and 2.

Online Science Learning: Best Practices and Technologies Downing, Kevin, Holtz, Jennifer, 2008-05-31 The continued growth in general studies and liberal arts and science programs online has led to a rise in the number of students whose science learning experiences are web based. However, little is known about what is actually going on in web based science courses at the level of the disciplines within liberal arts and sciences or the corresponding

course design features Online Science Learning Best Practices and Technologies reviews trends and efforts in web based science instruction and evaluates contemporary philosophies and pedagogies of online science instruction This title on an emergent and vital area of education clearly demonstrates how to enrich the academic character and quality of web based science instruction

Mediating Science Learning through Information and Communications Technology Richard Holliman,Eileen Scanlon,2013-04-15 Developments in information technology are bringing about changes in science education This Reader focuses on the theoretical and practical consideration of using information and communications technologies in teaching and learning It examines current approaches to teaching and learning in science at various levels of education and ways in which science is made more accessible This will include the future potential of such current developments as access to practical work delivered on the web The Reader is divided into three sections What are the current issues in using ICT to teach and learn in science Designing and evaluating ICT to teach and learn science Extending access to science learning This is a companion book to *Reconsidering Science Education* also published by RoutledgeFalmer

Mediating Science Learning Through ICT is a valuable resource for teachers on Masters courses in science education and academics in science education

Investigative Science Learning Environment Eugenia Etkina,David T Brookes,Gorazd Planinsic,2019-11-15 The goal of this book is to introduce a reader to a new philosophy of teaching and learning physics Investigative Science Learning Environment or ISLE pronounced as a small island ISLE is an example of an intentional approach to curriculum design and learning activities MacMillan and Garrison 1988 A Logical Theory of Teaching Erotetics and Intentionality Intentionality means that the process through which the learning occurs is as crucial for learning as the final outcome or learned content In ISLE the process through which students learn mirrors the practice of physics

Reconsidering Historical Epistemology Matteo Vagelli,2024-06-27 This book explores the key conceptual stakes underpinning historical epistemology The strong Anglophone interest in historical epistemology since at least the 1990s is typically attributed to its simultaneously philosophical and historical synthetic approach to the study of science Yet this account considered by critics to be an unreflective assumption has prevented historical epistemology from developing a clear understanding and definition especially regarding how precisely historical and philosophical reflections on the sciences should be combined Thus this book uniquely analyses how the problems and tensions inherent to the contemporary phase of historical epistemology can be clarified by reference to the classical French phase The archaeological method of Michel Foucault which draws on and transforms fundamental insights by Gaston Bachelard and Georges Canguilhem is used to exert an enduring influence on the field especially through the work of Ian Hacking and his philosophical cum historical analyses of styles of scientific reasoning Though this book is of great value to academic specialists and graduate students the fact it addresses questions broad in scope ensures it is also relevant to a range of scholars in many disciplines and will provoke discussion among those interested in foundational issues in history and philosophy of science Vagelli's book provides a both

unique and uniquely important window into historical epistemology and its relation to contemporary philosophy of science Unique because nowhere else can one find a single work that treats the range of topics that he covers Uniquely important because Vagelli's clear concise and comprehensive survey details key interrelationships among a range of American British and European views currently in play regarding historical epistemology and philosophy of science as well as the institutional and intellectual vectors driving their associated epistemological positions Paul Roth UC Santa Cruz USA Uneasily the history and philosophy of science have bolstered and undermined each other for all too long Would history offer nothing but potted episodes to confirm or contradict transhistorical claims about science Would philosophy dismantle uncritical historicist accounts of scientific discoveries Historical epistemology offers a more integrated path at once a history of the present and a philosophy of the past Matteo Vagelli draws together the insights of the Francophone Anglophone and Germanophone traditions to give us a sparkling lucid account of seeing our standards of scientific understanding as developing across time always asking how did we come to our standards of demonstration and argument Peter Galison Harvard University USA

Investigating University-School Partnerships Janice L. Nath, Irma N. Guadarrama, John Ramsey, 2011-04-01

Investigating University School Partnerships A Volume in Professional Development School Research the fourth book in the PDS Research Series developed by the same editors includes a collection of organized papers that represent the best and latest examples of practitioner thinking research and program design and evaluation in the field at the national level A wide variety of authors from the professional community of PDS researchers practitioners and other stakeholders engage the reader in research or case studies that foreground real life authentic contexts which in turn are designed to generate and fashion more questions and ideas The volume's contents of 26 chapters is divided into five areas 1 PDS Evaluation 2 Teacher Research and Inquiry 3 PDS Stakeholders Studies 4 Studies for Thought Ideas for Development and 5 Teaching Content Areas in PDSs As a whole the volume of papers maintains a consistency within a cohesive undercurrent that illustrates the spirited and visionary purpose of professional development schools to advance educational reform that leads to substantive change **East Meets West in Teacher Preparation** Wen Ma, 2014 **Rethinking Science Education** Roland M.

Schulz, 2014-08-01 This book presents a philosophy of science education as a research field as well as its value for curriculum instruction and teacher pedagogy It seeks to re think science education as an educational endeavour by examining why past reform efforts have been only partially successful including why the fundamental goal of achieving scientific literacy after several reform waves has proven to be so elusive The identity of such a philosophy is first defined in relation to the fields of philosophy philosophy of science and philosophy of education It argues that educational theory can support teacher's pedagogical content knowledge and that history philosophy and sociology of science should inform and influence pedagogy Some case studies are provided which examine the nature of science and the nature of language to illustrate why and how a philosophy of science education contributes to science education reform It seeks to contribute in general to the improvement

of curriculum design and science teacher education The perspective to be taken on board is that to teach science is to have a philosophical frame of mind about the subject about education about one's personal teacher identity Opinion formation : A life history study of the factors that influence the acceptance or rejection of the Big Bang theory and theory of biological evolution among lifelong learners. Dr Ian S. G. Blagrove, 2025-05-23 Abstract This book explores the factors that influence the acceptance or rejection of the Big Bang theory and the theory of biological evolution The rejection of either theory can occur despite the time that has elapsed since the original theories were proposed and their wider acceptance The study critically examines the biographies of individuals establishing the factors that influence their rejection or acceptance of either theory The book concludes that individuals are affected by multiple factors and explores how these findings may contradict other studies which identify religious belief as the driver for rejection The author proposes an original theory of opinion formation that is specific to both scientific theories and suggests the use of inclusive teaching methods and historical narrative within science lessons which may assist in explaining to students the story of discovery of each scientific theory as well as teaching the theory itself The study also concludes that the rejection of both theories particularly by older participants may be linked to past discredited theories including the Steady State theory and the theory of Panspermia

Affective Dimensions in Chemistry Education Murat Kahveci, MaryKay Orgill, 2015-01-08 This is a unique resource for those wishing to address the affective domain as they research and solve problems in chemistry education Contributions by world leading experts cover both fundamental considerations and practical case studies This work fills a gap in the literature of chemistry education which so far has focussed mainly on the cognitive domain The affective domain refers to feelings based constructs such as attitudes values beliefs opinions emotions interests motivation and a degree of acceptance or rejection It can affect students interest in science topics and their motivation to persevere in learning science concepts

researchers and policy makers **The Ethics of Consent and Choice in Prenatal Screening** Eleanor Miligan, 2011-01-18
Increasingly notions of individual autonomy personal choice and preference have become woven into our reproductive expectations With respect to prenatal screening the choices sought offered or denied are shaped and interpreted through a range of social personal institutional and philosophical lenses While prenatal screening seeks to promote parental choice and early intervention for the most part the genetic anomalies commonly targeted are inherently unfixable Frequently the only further intervention on offer is selective termination Hence the practice of prenatal screening raises complex ethical questions forcing judgement on the desirability or undesirability of certain traits in our future offspring This book explores the numerous factors that shape how such ethical choices are interpreted from the perspective of individual mothers and health care providers and considers the impact of these factors on personal autonomy and consent to prenatal screening

Teaching Science to Every Child John Settlage, Sherry Southerland, 2012-04-23 Teaching Science to Every Child provides timely and practical guidance about teaching science to all students Particular emphasis is given to making science accessible to students who are typically pushed to the fringe especially students of color and English language learners Central to this text is the idea that science can be viewed as a culture including specific methods of thinking particular ways of communicating and specialized kinds of tools By using culture as a starting point and connecting it to effective instructional approaches this text gives elementary and middle school science teachers a valuable framework to support the science learning of every student Written in a conversational style it treats readers as professional partners in efforts to address vital issues and implement classroom practices that will contribute to closing achievement gaps and advancing the science learning of all children Features include Point Counterpoint essays that present contrasting perspectives on a variety of science education topics explicit connections between National Science Education Standards and chapter content and chapter objectives bulleted summaries key terms reflection and discussion questions Additional resources are available on the updated and expanded Companion Website www.routledge.com/textbooks/9780415892582 Changes in the Second Edition Three entirely new chapters Integrated Process Skills Learning and Teaching Assessment Technological tools and resources embedded throughout each chapter Increased attention to the role of theory as it relates to science teaching and learning Expanded use of science process skills for upper elementary and middle school Additional material about science notebooks Provided by publisher *Reflective Teacher Development in Primary Science* Peter Ovens, 2005-08-10 Dominant theories about primary science contend that knowledge is the key Ovens challenges this view showing through case studies that inquiry and reflection play a significant part in the learning process This applies to pupils teachers and teacher educators Taking curiosity as a pre condition for good learning Ovens shows that it is possible to increase the desire to learn more and learn better to improve confidence in the ability to inquire to imbue pupils with the courage to seek improvement to place trust in collaborative processes to raise awareness of significant detail and to encourage open mindedness *The*

Pedagogy of Physical Science David Heywood, Joan Parker, 2009-12-16 In the science classroom there are some ideas that are as difficult for young students to grasp as they are for teachers to explain Forces electricity light and basic astronomy are all examples of conceptual domains that come into this category How should a teacher teach them The authors of this monograph reject the traditional separation of subject and pedagogic knowledge They believe that to develop effective teaching for meaningful learning in science we must identify how teachers themselves interpret difficult ideas in science and in particular what supports their own learning in coming to a professional understanding of how to teach science concepts to young children To do so they analyzed trainee and practising teachers responses to engaging with difficult ideas when learning science in higher education settings The text demonstrates how professional insight emerges as teachers identify the elements that supported their understanding during their own learning In this paradigm professional awareness derives from the practitioner interrogating their own learning and identifying implications for their teaching of science The book draws on a significant body of critically analysed empirical evidence collated and documented over a five year period involving large numbers of trainee and practising teachers It concludes that it is essential to problematize subject knowledge both for learner and teacher The book s theoretical perspective draws on the field of cognitive psychology in learning In particular the role of metacognition and cognitive conflict in learning are examined and subsequently applied in a range of contexts The work offers a unique and refreshing approach in addressing the important professional dimension of supporting teacher understanding of pedagogy and critically examines assumptions in contemporary debates about constructivism in science education
