Reconstructing Reason And Representation:

Reconstructing Reason and Representation Murray Clarke, 2022-06-07 A study of the philosophical implications of evolutionary psychology suggesting that knowledge is a set of natural kinds housed in the modules of a massively modular mind In *Reconstructing Reason and Representation* Murray Clarke offers a detailed study of the philosophical implications of evolutionary psychology In doing so he offers new solutions to key problems in epistemology and philosophy of mind including misrepresentation and rationality He proposes a naturalistic approach to reason and representation that is informed by evolutionary psychology and expanding on the massive modularity thesis advanced in work by Leda Cosmides and John Tooby argues for a modular adapticist account of misrepresentation and knowledge Just as the reliability of representation can be defended on the basis of an account of the proper function of cognitive modularity misrepresentation can be explained through an appeal to the gap theory by noting the divergence between the proper and actual domains of cognitive modules in a massively modular mind Clarke argues for an externalist modular reliabilism by suggesting that evolution has equipped us with generally reliable inferential systems even if they do not always produce true beliefs He argues that reliable deductive and inductive inference occurs only when cognitive modules deal with actual domains that are sufficiently similar to their proper domains This psychologically informed naturalized adapticism leads to the suggestion that knowledge is a set of natural kinds housed in the modules of a massively modular mind Typically the proper function of these cognitive modules is to provide us with truths that enable us to satisfy our basic biological needs Beyond reasoning modules other cognitive modules discussed include the ability to orient ourselves in space and our abilities with language numbers object reasoning and social understanding Clarke also defends Cosmides and Tooby s massive modularity hypothesis against such critics as Jerry Fodor by demonstrating that these critics consistently misrepresent Cosmides and Tooby s position A

Theory of Literary Explication Kenneth B. Newell, 2011-07-12 This book presents current multidisciplinary research and theory from 17 different fields most of them never before applied to literary explication in order to provide 1 justification for the practice of a relative probability type of explication as distinguished from interpretation 2 a relativistic foundation for the preference of some explication s of a literary work over others and thereby 3 a middle way between the postmodern pluralist view that a work has only an unlimited number of equally acceptable though different explications and the modern intentionalist view that it has only one acceptable explication the author s Nine of the 17 fields are of primary relevance critical theory hermeneutics probability theory philosophy of science second order logic and four fields of cognitive science linguistics epistemology neuropsychology and artificial intelligence But the book also touches upon textual criticism legal theory measure theory fuzzy logic animal learning behavior developmental psychology evolutionary epistemology and neurobiology The book shows that those using a relative probability type of explication on a literary work can achieve consensus because the healthy adult human brain has an evolved uniform and probably innate ability to form relative

probability judgments and to form them in the practice of activities like reading and explicating that are not uniform and innate Lastly the book contributes to the scholarly areas of explication theory and practice first by providing a relativistic foundation for a craft explication that currently is not acknowledged to have any foundation but nonetheless continues and will continue to be practiced and second by presenting a means relative epistemic probability by which judging some explication s of a literary work to be more acceptable than others may be justified philosophically an uncommon circumstance in this postmodern era in which philosophical justification of many beliefs and practices is thought to be untenable

Connected Minds Nicolas Payette, 2012-04-25 The theme for this volume is social cognition construed from a psychological and collective point of view From the psychological point of view the question is to understand how the human mind processes social information how it encodes stores and uses it in the social context From a collective point of view the question is to understand how individual cognition is influenced improved increased or impaired by social interactions for instance in communicating and collaborating with intelligent agents These two dimensions of social cognition are obviously interdependent the psychological dimension makes the collective dimension possible which can in return modify the psychological dimension The book is divided into four parts The first part is about socio cognitive skills Among those we count face recognition imitation learning embodied social interaction cheater detection and psychological concept acquisition The second part is about persons and memories stereotypes attraction judgements and impression formation are the subjects at hand The third part is about understanding each other A key part of that understanding is the motor system whether or not we see it as a mirror but community membership itself can also contribute to our understanding of others The fourth and final part is about social cognition in societies This section is unified by the common goal of understand how social cognition actually influences the structure of different societies whether whole cultures specific social networks rural communities or even groups of caterpillars
