**Recording Structures of Mammals** Galina Aleksandrovna Klevezal', 1996      Recording Structures of Mammals

Galina A. Klevezal, 2017-10-19 This text focuses on the principles and methods of using growth layers formed in teeth and bones of mammals to make a judgement on essential traits of the animal's life history. In nearly all mammalian species including man the age of individuals can be determined from the number of growth layers and at least in some of them it is possible to estimate the season of an animal's birth and death age of sexual maturation periodicity of reproduction certain feeding habits and other aspects of the individual's biology. It is also possible from tooth enamel analysis to assess doses of radiation accumulated by animals and human beings during their lifetime. This book is intended for zoologists wild game biologists and zoo archaeologists but some of the sections could also be of interest for anthropologists radioecologists and conservation biologists.

**Hypsodonty in Mammals** Richard H. Madden, 2014-12-11 The evolution of high crowned teeth hypsodonty is a defining characteristic of many terrestrial herbivores To date the most prominent focus in the study of the teeth of grazing herbivores has been co evolution with grasses and grasslands This book develops the idea further and looks at the myriad ways that soil can enter the diet Madden then expands this analysis to examine the earth surface processes that mobilize sediment in the environment The text delivers a global perspective on tooth wear and soil erosion with examples from the islands of New Zealand to the South American Andes highlighting how similar geological processes worldwide result in convergent evolution The final chapter includes a review of elodonty in the fossil record and its environmental consequences Offering new insights into geomorphology and adaptive and evolutionary morphology this text will be of value to any researcher interested in the evolution of tooth size and shape **A Bronze Age Landscape in the Russian Steppes** David W. Anthony, Dorcas R.

Brown, Aleksandr A. Khokhlov, Pavel F. Kuznetsov, Oleg D. Mochalov, 2016-12-31 The first English language monograph that describes seasonal and permanent Late Bronze Age settlements in the Russian steppes this is the final report of the Samara Valley Project a US Russian archaeological investigation conducted between 1995 and 2002 It explores the changing organization and subsistence resources of pastoral steppe economies from the Eneolithic 4500 BC through the Late Bronze Age 1900-1200 BC across a steppe and river valley landscape in the middle Volga region with particular attention to the role

of agriculture during the unusual episode of sedentary settled pastoralism that spread across the Eurasian steppes with the Srubnaya and Andronovo cultures 1900-1200 BC. Three astonishing discoveries were made by the SVP archaeologists: agriculture played no role in the LBA diet across the region; a surprise given the settled residential pattern; a unique winter ritual was practiced at Krasnosamarskoe involving dog and wolf sacrifices possibly related to male initiation ceremonies; and overlapping spheres of obligation, cooperation, and affiliation operated at different scales to integrate groups defined by politics, economics, and ritual behaviors.

**Vertebrate Skeletal Histology and Paleohistology** Vivian de Buffrénil, Armand J. de Ricqlès, Louise Zylberberg, Kevin Padian, 2021-06-24. *Vertebrate Skeletal Histology and Paleohistology* summarizes decades of research into the biology and biological meaning of hard tissues in both living and extinct vertebrates. In addition to outlining anatomical diversity, it provides fundamental phylogenetic and evolutionary contexts for interpretation. An international team of leading authorities review the impact of ontogeny, mechanics, and environment in relation to bone and dental tissues. Synthesizing current advances in the biological problems of growth, metabolism, evolution, ecology, and behavior, this comprehensive and authoritative volume is built upon a foundation of concepts and technology generated over the past fifty years.

**Embryos in Deep Time** Marcelo Sánchez-Villagra, 2012-04-03. *Fossils, ontogeny, and phylogeny: Evo devo, plasticity, and modules*. Fossilized vertebrate ontogenies. Bones and teeth under the microscope. Proportions, growth, and taxonomy. Growth and diversification patterns. Fossils and developmental genetics. Missing links and the evolution of development. Mammalian and human development. On trilobite shells and bugs. Epilogue: is there a moral to developmental paleontology?

**Fishery Bulletin**, 2004. *Biology of Turtles* Jeanette Wyneken, Matthew H. Godfrey, Vincent Bels, 2007-12-26. Featuring in-depth contributions from an international team of experts, *The Biology of Turtles* provides the first comprehensive review of the Testudinata. The book starts with the premise that the structure of turtles is particularly interesting and best understood within the context of their development, novelty, functional diversity, and ecology.

**The Bowhead Whale** J.C. George, J.G.M. Thewissen, 2020-09-11. *The Bowhead Whale Balaena mysticetus: Biology and Human Interactions* covers bowhead biology from their anatomy and behavior to conservation, distribution, ecology, and evolution. The book also discusses the biological and physical aspects of the Arctic ecosystem in which these whales live, with careful attention paid to the dramatic changes taking place. A special section of the book describes the interactions of humans with bowheads in the past and present, focusing on their importance to Indigenous communities and the challenges regarding entanglement in fishing gear, industrial noise, and ship strikes. This volume brings together the knowledge of bowheads in one place for easy reference for scientists that study the species, marine mammal biologists, but equally important for everyone who is interested in the Arctic. Presents the only current book dedicated to this species. Includes short, high-impact chapters that make it possible to review all bowhead biology in one compact volume. Illustrated with never-before-published photos of bowheads in their natural environment. Provides a platform for an in-depth understanding of indigenous whaling.

**Analysis of vertebrate predator-prey**

**community** Vadim Sidorovich, 2011-09-01 This monograph is about predation in vertebrate animal community. The studies were done in the seminatural terrains with transitional mixed forest within the European forest zone in Belarus. The result part was organised as a top down flow. First the community characteristics related to predators were estimated. I presented data on predator species richness, population density and biomass with special attention paid to the changes in predator species diversity occurred during the last two centuries and particularly in connection with the American mink and raccoon dog naturalization. Then the main features of predator food niches were given and the structure of various predator guilds and size structure in predators were analysed. The next part of the monograph was devoted to examining of community important factors acting in semi natural terrains. Such factors affected either the whole community or its marked fragment. The last quite a large part of the monograph consisted of many chapters which present more or less essential results on different predator species and stresses hot questions of their population ecology.

**Zooarchaeology in Practice** Christina M. Giovas, Michelle J. LeFebvre, 2017-11-24 Zooarchaeology in Practice unites depth of treatment with broad topical coverage to advance methodological discussion and development in archaeofaunal analysis. Through case studies, historical accounts and technical reviews authored by leading figures in the field, the volume examines how zooarchaeological data and interpretation are shaped by its methods of practice and explores the impact of these effects at varying levels of investigation. Contributing authors draw on geographically and taxonomically diverse datasets providing instructive approaches to problems in traditional and emerging areas of methodological concern. Readers from specialists to students will gain an extensive sophisticated look at important disciplinary issues that are sure to provoke critical reflection on the nature and importance of sound methodology. With implications for how archaeologists reconstruct human behavior and paleoecology and broader relevance to fields such as paleontology and conservation biology, Zooarchaeology in Practice makes an enduring contribution to the methodological advancement of the discipline.

Forerunners of Mammals Anusuya Chinsamy-Turan, 2021-12-22 An in depth look at the origin and evolutionary radiation of the synapsids. About 320 million years ago a group of reptiles known as the synapsids emerged and forever changed Earth's ecological landscapes. This book discusses the origin and radiation of the synapsids from their sail backed pelycosaur ancestor to their diverse descendants the therapsids or mammal like reptiles that eventually gave rise to mammals. It further showcases the remarkable evolutionary history of the synapsids in the Karoo Basin of South Africa and the environments that existed at the time. By highlighting studies of synapsid bone microstructure it offers a unique perspective of how such studies are utilized to reconstruct various aspects of biology such as growth dynamics, biomechanical function and the attainment of sexual and skeletal maturity. A series of chapters outline the radiation and phylogenetic relationships of major synapsid lineages and provide direct insight into how bone histological analyses have led to an appreciation of these enigmatic animals as once living creatures. The penultimate chapter examines the early radiation of mammals from their nonmammalian cynodont

ancestors and the book concludes by engaging the intriguing question of when and where endothermy evolved among the therapsids Ever since Nick Hotton's book from the 1980s we have needed an update on the biology of therapsids and it has been Anusuya Chinsamy Turan and her students and associates who through their bone histological work have made the greatest progress in this field Martin Sander Steinmann Institute University of Bonn *Forerunners of Mammals* is full of meticulous detail It also contains a number of excellently rendered illustrations of some of the animals covered in the book and the final chapter is a discussion of the evolution of endothermy that anyone with a background in biology might find of interest Recommended Choice *Forerunners of Mammals* will take interested readers beyond the classic jaw to ear appreciation of therapsids towards a deeper appreciation of the ancestry of mammals *Journal of Mammalian Evolution* This volume represents a state of the art contribution to our understanding of the paleobiology of how mammals arose and what factors contributed to their evolutionary radiation and eventual success It is highly recommended for anyone interested in these topics and will be accessible to readers with minimal background in bone histology and synapsid paleontology

*Quarterly Review of Biology*     *The Evolution of the Human Head* Daniel E. Lieberman, 2011-05-03 In one sense human heads function much like those of other mammals We use them to chew smell swallow think hear and so on But in other respects the human head is quite unusual Unlike other animals even our great ape cousins our heads are short and wide very big brained snoutless largely furless and perched on a short nearly vertical neck Daniel E Lieberman sets out to explain how the human head works and why our heads evolved in this peculiarly human way Exhaustively researched and years in the making this innovative book documents how the many components of the head function how they evolved since we diverged from the apes and how they interact in diverse ways both functionally and developmentally causing them to be highly integrated This integration not only permits the head's many units to accommodate each other as they grow and work but also facilitates evolutionary change Lieberman shows how when and why the major transformations evident in the evolution of the human head occurred The special way the head is integrated Lieberman argues made it possible for a few developmental shifts to have had widespread effects on craniofacial growth yet still permit the head to function exquisitely This is the first book to explore in depth what happened in human evolution by integrating principles of development and functional morphology with the hominin fossil record *The Evolution of the Human Head* will permanently change the study of human evolution and has widespread ramifications for thinking about other branches of evolutionary biology

*The Biology of Sea Turtles* Jeanette Wyneken, Kenneth J. Lohmann, John A. Musick, 2013-03-25 Since the first volume of *The Biology of Sea Turtles* was published in 1997 the field has grown and matured in ways few of the authors would have predicted particularly in the areas of physiology behavior genetics and health Volume III presents timely coverage of emerging areas as well as the integration of approaches and information that did not exist even a decade ago The book assembles the foremost experts in each topic to provide the most up to date and comprehensive book on sea turtles available today New areas covered include

in vivo imaging of structure spatial distributions of marine turtles at sea epibiosis imprinting parasitology and climatic effects Life history is explored in three chapters covering age determination predator prey interactions and mortality from bycatch The Biology of Sea Turtles Volume III will inspire scientists and students to explore and expand their understanding of these intriguing animals The book provides clear baseline summaries thoughtful syntheses and effective presentation of the most fundamental topics spanning form and function health distributions behavior genetics evolution and ecology Its scope and depth make it the definitive go to reference in the field      *Age Estimation* Joe Adserias-Garriga, 2019-04-11 Age Estimation A Multidisciplinary Approach is the only reference in the field covering all techniques and methods involving age estimation from different perspectives in just one volume The book provides comprehensive coverage of all aspects of age estimation aging the living and the dead human rights and skeletal dental histological and biochemical techniques and methods available Each chapter is written by internationally known expert contributors Age Estimation A Multidisciplinary Approach is a one of a kind resource for those involved in estimating the age of the living and the dead Presents a concentration of all techniques and methods involving age estimation in a single volume Provides a multidisciplinary approach that lends itself to researchers practitioners and students from a variety of different fields Includes contributions by world renowned forensic specialists      **Dental Cementum in Anthropology** Stephan Naji, William Rendu, Lionel Gourichon, 2022-02-10 Presents the latest advances in cementochronology and its use in various anthropological contexts from ancient fossils to forensic cases

**Teeth** Simon Hillson, 2005-07-21 Archaeological discoveries of teeth provide remarkable information on humans animals and the health hygiene and diet of ancient communities In this fully revised and updated 2005 edition of his seminal text Simon Hillson draws together a mass of material from archaeology anthropology and related disciplines to provide a comprehensive manual on the study of teeth The range of mammals examined has been extended to include descriptions and line drawings for 325 mammal genera from Europe North Africa western central and northeastern Asia and North America The book also introduces dental anatomy and the microscopic structure of dental tissues explores how the age or season of death is estimated and looks at variations in tooth size and shape With its detailed descriptions of the techniques and equipment used and its provision of tables and charts this book is essential reading for students of archaeology zoology and dental science
