Riparian Ecosystem Recovery in Arid Lands Mark K. Briggs, 2023-02-07 Riparian ecosystems are declining throughout the southwestern United States where many have disappeared completely yet progress toward checking their decline has been marginal and the results of only a few recovery projects have been evaluated In this guidebook Mark K Briggs has filled this gap in riparian conservation literature Based on his experiences gleaned from evaluating the results of many riparian rehabilitation projects Briggs presents these results in a manner that biologists hydrologists government planners resource managers and other concerned citizens can immediately apply toward developing site specific recovery strategies The book opens with a review of watershed characteristics and an examination of drainage systems then proceeds to determining the causes of riparian decline It introduces five factors that have a significant effect on the results of riparian rehabilitation natural regeneration water availability channel stability direct impacts such as livestock grazing and recreational activities and soil salinity and offers case studies that demonstrate how revegetation has been used both effectively and ineffectively It also discusses strategies other than revegetation that may be effective in improving the ecological condition of a site Many of the strategies presented are also relevant to nonarid climates and to urban areas By emphasizing evaluation of riparian ecosystems so that the causes of degradation can be understood and by offering general approaches that can be tailored to specific situations Riparian Ecosystem Recovery in Arid Lands takes a holistic approach to riparian recovery that will enable users to better judge whether recovery expenditures are likely to produce desired results An unprecedented work it will substantially add to efforts across the Southwest and elsewhere to restore these unique and priceless ecosystems

Environmental and specific diversity in the Chihuahuan desert in general and in the Cuatro Ci negas Basin in particular has long been recognized as outstanding This book provides a global ecological overview together with in depth studies of specific processes The Chihuahuan desert is the warmest in North America and has a complex geologic climatic and biogeographical history which affects today s distribution of vegetation and plants and generates complex phylogeographic patterns The high number of endemic species reflects this complex set of traits The modern distribution of environments including aquatic and subaquatic systems riparian environments gypsum dunes and gypsum rich soils low levels of phosphorous and organic matter and high salinity combined with an extreme climate call for a range of adaptations Plants are distributed in a patchy pattern based on punctual variations and many of them respond to different resources and conditions with considerable morphological plasticity In terms of physiological morphological and ecological variability cacti were identified as the most important group in specific environments like bajadas characterized by high diversity values while gypsophytes and gypsovagues of different phylogenies including species with restricted distribution and endemics

Proceedings RMRS. ,1998 **Fort Bliss Mission and Master Plan (TX,NM)** ,2001 *Ecological Restoration in International Environmental Law* Anastasia Telesetsky,An Cliquet,Afshin Akhtar-Khavari,2016-12-01 Human activities are depleting ecosystems at an unprecedented rate In spite of nature conservation efforts worldwide many ecosystems including those critical for human well being have been damaged or destroyed States and citizens need a new vision of how humans can reconnect with the natural environment With its focus on the long term holistic recovery of ecosystems ecological restoration has received increasing attention in the past decade from both scientists and policymakers Research on the implications of ecological restoration for the law and law for ecological restoration has been largely overlooked This is the first published book to examine comprehensively the relationship between international environmental law and ecological restoration While international environmental law IEL has developed significantly as a discipline over the past four decades this book enquires whether IEL can now assist states in making a strategic transition from not just protecting and maintaining the natural environment but also actively restoring it Arguing that states have international duties to restore this book offers reflections on the philosophical context of ecological restoration and the legal content of a duty to restore from an international law European Union law and national law perspective The book concludes with a discussion of several
