dominant wisdom capitalism's origins should not be understood as a development confined to the geographically and culturally sealed borders of Europe but the outcome of a wider array of global processes in which non-European societies played a decisive role. Through an outline of the uneven histories of Mongolian expansion, New World discoveries, Ottoman-Habsburg rivalry, the development of the Asian colonies and bourgeois revolutions, Alexander Anievas and Kerem Nisancioglu provide an account of how these diverse events and processes came together to produce capitalism.

Science, technology and economic growth in the eighteenth century A. E. Musson, 2014-01-09. Originally published in 1972. This book illustrates the growing awareness of the importance of science and technology in the Industrial Revolution. The contributors show that the growth in the teaching and literature of natural philosophy, mechanics, hydraulics, etc., mathematics and chemistry together with such new agencies as philosophical societies, itinerant lecturers and libraries were significant factors in the development of the Industrial Revolution.

On the Causes of Economic Growth Carlos Sabillon, 2008. What's the secret? Can policies grow the economy? How do leaders make their countries prosper? Since the earliest of times, humans have endeavored to uncover the causes of prosperity. Step by step, Sabillon tests the principal theories on the causes of economic growth against the facts of history. Here for the first time, the economic statistics of the world are presented in a rationalized format that allows for an easy comparison across countries and through time with a challenge to those who study them. What do the statistics show and what are the trends beyond cherished theories that suit various political purposes? Tested against the historical data, textbook ideas and theories consistently come up short. Such analyses are highly troubling because they reveal an absence of correlation between theory and reality. The data statistics illustrating the development of the world economy during the last several centuries was extracted from economic history and economic history books from publications of the World Bank, the Organization for Economic Cooperation and Development, the International Monetary Fund, the World Trade Organization, the United Nations specialized agencies, research institutes and country statistical publications and other books and journals. Analyzing the data over geography and time, Sabillon concludes that contrary to contemporary wisdom, left to market forces alone, the economy will not and does not flourish. Only decisive intervention in support of manufacturing and technological advancement can provide growth. This systematic review of history and test of accepted dogma challenges economic theorists to consider one part of the equation of economic policy that has been wiped off the blackboard in today's politically correct debates.
