Integrity, Internal Control and Security in Information Systems Michael Gertz, Erik Guldentops, Leon A.M. Strous, 2013-11-11 IT Governance is finally getting the Board's and top management's attention The value that IT needs to

return and the associated risks that need to be managed have become so important in many industries that enterprise survival depends on it. Information integrity is a significant part of the IT Governance challenge. Among other things, this conference will explore how Information Integrity contributes to the overall control and governance frameworks that enterprises need to put in place for IT to deliver business value and for corporate officers to be comfortable about the IT risks the enterprise faces. The goals for this international working conference are to find answers to the following questions: what precisely do business managers need in order to have confidence in the integrity of their information systems and their data? what is the status quo of research and development in this area? where are the gaps between business needs on the one hand and research and development on the other? what needs to be done to bridge these gaps? The contributions have been divided in the following sections:

- Refereed papers: These are papers that have been selected through a blind refereeing process by an international programme committee.
- Invited papers: Well-known experts present practice and research papers upon invitation by the programme committee.
- Tutorial: Two papers describe the background status quo and future development of CobiT as well as a case of an implementation of Co biT.

30 Minute Risk Assessments David G. Sheriff, 2017-10-26

I am writing this book with the purpose of capturing what a group of Corrective Action Engineers of which I was a member learned during 24 years of investigating the mistakes made by the thousands of workers who prepared the Space Shuttles for launch at the Kennedy Space Center. This book was not written for people who study human error. In fact, this book should be considered to be more of a shop manual for those individuals whose job requires them to actually deal hands-on with human error on a daily basis. This book was written for managers that want to make sure their processes will be performed correctly and their people are working safely with no one at risk of being hurt as a result of a human error. This book was written for people who get handed a human error incident and told to investigate it, find out the real reason for why it happened and make sure it never happens again. This book was written for the person whose management tells him that the workforce is making far too many mistakes and they expect him to find out why and do something about it. This book was written for the engineer who is responsible for some critical process and wants to limit the possibility of a human error occurring while the process is being worked. Over the years we developed simple concepts and methods to assist us in performing human error investigations, risk assessments, process design as well as the determination of suitable corrective/preventative actions. These concepts and methods that we developed had to be quick and easy to use since we dealt with a workforce of several thousand and our NASA counterparts expected some level of preliminary investigation and understanding of every workforce error within hours of the occurrence. NASA also expected the fixes for any human error issue to be implemented in a timely manner and be effective. What my group learned applies to a workforce of 2 or even 20,000. This book explains how the 30 Minute Risk Assessment concept came about, the basis on why it works and how any organization can use it to assure all of their processes can be counted upon when needed. I am completely confident that anyone having read this book will look at

workforce error differently A reader will be able to recognize those processes where errors are likely to occur that they would not have identified previously A reader will understand how risk assessments can be performed that are quick simple repeatable and capable of identifying high risk situations correctly These risk assessments will also be suitable for clearly identifying exactly what actions need to be taken to reduce the risk identified and assist in prioritizing the order for addressing the required actions
