Review of the Department of Homeland Security's Approach to Risk Analysis National Research Council, Committee to Review the Department of Homeland Security's Approach to Risk Analysis, 2010-10-10 The events of September 11 2001 changed perceptions rearranged national priorities and produced significant new government entities including the U S Department of Homeland Security DHS created in 2003 While the principal mission of DHS is to lead efforts to secure the nation against those forces that wish to do harm the department also has responsibilities in regard to preparation for and response to other hazards and disasters such as floods earthquakes and other natural disasters Whether in the context of preparedness response or recovery from terrorism illegal entry to the country or natural disasters DHS is committed to processes and methods that feature risk assessment as a critical component for making better informed decisions Review of the Department of Homeland Security s Approach to Risk Analysis explores how DHS is building its capabilities in risk analysis to inform decision making The department uses risk analysis to inform decisions ranging from high level policy choices to fine scale protocols that guide the minute by minute actions of DHS employees Although DHS is

responsible for mitigating a range of threats natural disasters and pandemics its risk analysis efforts are weighted heavily toward terrorism In addition to assessing the capability of DHS risk analysis methods to support decision making the book evaluates the quality of the current approach to estimating risk and discusses how to improve current risk analysis procedures Review of the Department of Homeland Security s Approach to Risk Analysis recommends that DHS continue to build its integrated risk management framework It also suggests that the department improve the way models are developed and used and follow time tested scientific practices among other recommendations

The Illusion of Certainty Erik Rifkin,Edward Bouwer,2007-09-23 Risk analysis and risk assessment have been with us long enough for the terms to sound familiar to most people Standard fare for the nuclear power industry and the military for a half a century or more risk assessment is now a routine aspect of environmental management public health and individual medical decision making There have been popular books on risk and the current poker craze will likely spread risk concepts to an even wider and younger audience Yet despite all of this extensive and varied experience we the analysts and practitioners have not done nearly enough to explain to the people who need to know what they need to know especially the uncertainty inherent in risk estimates There are many instances in which the failure to communicate risk information accurately or completely has had an important and material impact on decisions and actions I have been involved in some of these ranging from local plans for water management to national decisions about nuclear waste I have seen first hand the effects of poorly done risk assessments and bad risk communication and especially the way in which the uncertainty of risk estimates is handled or mishandled The consequences of doing this wrong are high It s high time that we addressed this gap in understanding and this book is an excellent and important step in doing so

Political Participation in France and Germany Oscar W Gabriel,Silke I Keil,Eric Kerrouche,2013-07-01 How do France and Germany compare in the world of participatory political communities This volume sets out an impressive historical theoretical and institutional framework for a comprehensive comparative and empirical analysis of the forms patterns trends and determinants of citizen participation in two of Europe s largest democracies Written by an international team of political scientists it starts with an outline of the participatory traditions in both countries before turning to the theoretical foundations of empirical research regarding the role of political participation in modern democracies It provides an overview of how the perception of political participation has changed over the years and the forms of both conventional participation particularly with regard to electoral participation and unconventional participation like protest and other new forms of citizen involvement are analysed in detail Exploring new approaches in participation research social participation is seen as not just correlating with political participation but as a specific form of civic engagement in itself A broad range of activities such as electoral and party related participation political protest participation in voluntary associations voting in referenda and taking part in dialogue orientated participatory activities is examined and the analysis identifies which societal institutional and cultural factors account for the differences and

Integrating Climate Change Actions Into Local Development Livia Bizikova, John Robinson, Stewart Cohen, 2015-02-13 To date climate change adaptation and mitigation have been treated separately both in research and in the climate negotiations However a growing body of literature is now being developed that points to actual and potential synergies and trade offs between responses to climate change and sustainability This literature has evolved in a spontaneous way with diverse approaches and no common methodology to help practitioners explicitly plan for these synergies This special issue of the Climate Policy journal addresses this gap between scientific knowledge and practitioners needs by focussing on linkages between climate change and sustainable development at the level of conceptual framework and methods In particular the papers address in an integrated way local development options involving both adaptation and mitigation in order to promote resilience to climate change in human and natural systems The special issue provides policy and methodological guidelines for linking local development pathways with responses to climate change based on collaboration between local practitioners the public and scientists *Stakeholder Dialogues in Natural Resources Management* Susanne Stoll-Kleemann, Martin Welp, 2007-01-10 Participatory Processes for Natural Resource Management Ortwin Renn University of Stuttgart Stuttgart Germany Need for analytic deliberative processes Inviting the public to be part of the decision making process in natural resource management has been a major objective in European and American environmental policy arenas The US National Academy of Sciences has encouraged environmental protection agencies to foster citizen participation and public involvement for making environmental policy making and natural resource management more effective and democratic Stern and Fineberg 1996 The report emphasizes the need for a combination of assessment and dialogue which the authors have framed the analytic deliberative approach Unfortunately early public involvement of the public in deliberative processes may compromise however the objective of efficient and effective policy implementation or violate the principle of fairness Cross 1998 Okrent 1998 Another problem is that the public consists of many groups with different value structures and preferences Without a systematic procedure to reach consensus on values and preferences the public s position often appears as unclear Coglianese 1997 Rossi 1997 Participatory processes are thus needed that combine technical expertise rational decision making and public values and preferences How can and should natural resource managers collect public preferences integrate public input into the management process and assign the appropriate roles to technical experts stakeholders i e *Governing Sustainability* W. Neil Adger, Andrew Jordan, 2009-02-05 The crisis of unsustainability is above all else a crisis of governance The transition to a more sustainable world will inevitably require radical changes in the actions of all governments and it will call for significant changes to the lifestyles of individuals everywhere Bringing together some of the world s most highly regarded experts on governance and sustainable development this book examines these necessary processes and consequences across a range of sectors regions and other important areas
