*Handbook of Experimental Economic Methodology* Guillaume R. Fréchette, Andrew Schotter, 2015-01-02 The Handbook of Experimental Economic Methodology edited by Guillaume R Fr chette and Andrew Schotter aims to confront and debate the issues faced

by the growing field of experimental economics For example as experimental work attempts to test theory it raises questions about the proper relationship between theory and experiments As experimental results are used to inform policy the utility of these results outside the lab is questioned and finally as experimental economics tries to integrate ideas from other disciplines like psychology and neuroscience the question of their proper place in the discipline of economics becomes less clear This book contains papers written by some of the most accomplished scholars working at the intersection of experimental behavioral and theoretical economics talking about methodology It is divided into four sections each of which features a set of papers and a set of comments on those papers The intention of the volume is to offer a place where ideas about methodology could be discussed and even argued Some of the papers are contentious a healthy sign of a dynamic discipline while others lay out a vision for how the authors think experimental economics should be pursued This exciting and illuminating collection of papers brings light to a topic at the core of experimental economics Researchers from a broad range of fields will benefit from the exploration of these important questions

*Straight Choices* Ben R. Newell, David A. Lagnado, David R. Shanks, 2015-06-12 Should I have this medical treatment or that one Is this computer a better buy than that one Should I invest in shares or keep my money under the bed We all face a perplexing array of decisions every day Thoroughly revised and updated throughout the new edition of *Straight Choices* provides an integrative account of the psychology of decision making and shows how psychological research can help us understand our uncertain world *Straight Choices* emphasises the relationship between learning and decision making arguing that the best way to understand how and why decisions are made is in the context of the learning and knowledge acquisition which precedes them and the feedback which follows The mechanisms of learning and the structure of environments in which decisions are made are carefully examined to explore their impact on our choices The authors then consider whether we are all constrained to fall prey to cognitive biases or whether with sufficient exposure we can find optimal decision strategies and improve our decision making Featuring three completely new chapters this edition also contains student friendly overviews and recommended readings in each chapter It will be of interest to students and researchers in cognitive psychology behavioral economics and the decision sciences as well as anyone interested in the nature of decision making
