On The Contexts Of Things Human:

   On the Contexts of Things Human Ronald J. MacGregor,2006 The study of isoperimetric inequalities involves a fascinating interplay of analysis geometry and the theory of partial differential equations Several conjectures have been made and while many have been resolved a large number still remain open One of the principal tools in the study of isoperimetric problems especially when spherical symmetry is involved is Schwarz symmetrization which is also known as the spherically symmetric and decreasing rearrangement of functions The aim of this book is to give an introduction to the theory of Schwarz symmetrization and study some of its applications The book gives an modern and up to date treatment of the subject and includes several new results proved recently Effort has been made to keep the exposition as simple and self contained as possible A knowledge of the existence theory of weak solutions of elliptic partial differential equations in Sobolev spaces is however assumed Apart from this and a general mathematical maturity at the graduate level there are no other prerequisites   Human Dignity in an African Context Motsamai Molefe,Christopher Allsobrook,2023-11-07 This book is a contribution to African philosophy by philosophers focusing specifically on the concept of human dignity in ethical theory The concept of human dignity denotes the intrinsic and superlative worth associated with human beings in virtue of which we owe them utmost moral regard Although dignity is a foundational concept for African philosophy there remains scant literature in African philosophy dedicated to critical and systematic reflection on the concept of human dignity This volume responds to this lacuna by bringing together chapters that offer philosophical exposition defense or even rejection and application of the concept of human dignity in light of intellectual resources in African cultures such as ubuntu personhood and serithi   **Eighteenth-Century Thing Theory in a Global Context** Ileana Baird,Christina Ionescu,2016-04-29 Exploring Enlightenment attitudes toward things and their relation to human subjects this collection offers a geographically wide ranging perspective on what the eighteenth century looked like beyond British or British colonial borders To highlight trends fashions and cultural imports of truly global significance the contributors draw their case studies from Western Europe Russia Africa Latin America and Oceania This survey underscores the multifarious ways in which new theoretical approaches such as thing theory or material and visual culture studies revise our understanding of the people and objects that inhabit the phenomenological spaces of the eighteenth century Rather than focusing on a particular geographical area or on the global as a juxtaposition of regions with a distinctive cultural footprint this collection draws attention to the unforeseen relational maps drawn by things in their global peregrinations celebrating the logic of serendipity that transforms the object into some thing else when it is placed in a new locale   Restoring the Human Context to Literary and Performance Studies Howard Mancing,Jennifer Marston William,2022-01-28 Restoring the Human Context to Literary and Performance Studies argues that much of contemporary literary theory is still predicated at least implicitly on outdated linguistic and psychological models such as post structuralism psychoanalysis and behaviorism which significantly contradict

current dominant scientific views By contrast this monograph promotes an alternative paradigm for literary studies namely Contextualism and in so doing highlights the similarities and differences among the sometimes conflicting contemporary cognitive approaches to literature and performance arguing not in favor of one over the other but for Contextualism as their common ground   Property and Human Rights in a Global Context Ting Xu,Jean Allain,2016-03-24 Property as a human rights concern is manifested through its incorporation in international instruments and as a subject of the law through property related cases considered by international human rights organs Yet for the most part the relationship between property and human rights has been discussed in rather superficial terms lacking a clear substantive connection or common language That said the currents of globalisation have witnessed a new era of interrelation between these two areas of the law including the emergence of international intellectual property law and the recognition of indigenous claims which in fundamental ways speak to an engagement with human rights law This collection starts the conversation between human rights lawyers and property lawyers and explores analytical approaches to the increasing relationship between property and human rights in a global context The chapters engage with key theoretical and policy debates and range across three main themes The re evaluation of the public private divide in the law the tensions between the market and social justice in development and the balance between the rights of individuals and those of communities The chapters adopt a global comparative perspective and engage in case studies from countries including India Philippines Brazil the United States the United Kingdom and includes various regions of Africa and Europe   *Engineering in Context* ,2009   **Human-Machine Shared Contexts** William Lawless,Ranjeev Mittu,Donald Sofge,2020-06-10 Human Machine Shared Contexts considers the foundations metrics and applications of human machine systems Editors and authors debate whether machines humans and systems should speak only to each other only to humans or to both and how The book establishes the meaning and operation of shared contexts between humans and machines it also explores how human machine systems affect targeted audiences researchers machines robots users and society as well as future ecosystems composed of humans and machines This book explores how user interventions may improve the context for autonomous machines operating in unfamiliar environments or when experiencing unanticipated events how autonomous machines can be taught to explain contexts by reasoning inferences or causality and decisions to humans relying on intuition and for mutual context how these machines may interdependently affect human awareness teams and society and how these machines may be affected in turn In short can context be mutually constructed and shared between machines and humans The editors are interested in whether shared context follows when machines begin to think or like humans develop subjective states that allow them to monitor and report on their interpretations of reality forcing scientists to rethink the general model of human social behavior If dependence on machine learning continues or grows the public will also be interested in what happens to context shared by users teams of humans and machines or society when these machines malfunction As scientists and engineers think through this change in

human terms the ultimate goal is for AI to advance the performance of autonomous machines and teams of humans and machines for the betterment of society wherever these machines interact with humans or other machines This book will be essential reading for professional industrial and military computer scientists and engineers machine learning ML and artificial intelligence AI scientists and engineers especially those engaged in research on autonomy computational context and human machine shared contexts advanced robotics scientists and engineers scientists working with or interested in data issues for autonomous systems such as with the use of scarce data for training and operations with and without user interventions social psychologists scientists and physical research scientists pursuing models of shared context modelers of the internet of things IOT systems of systems scientists and engineers and economists scientists and engineers working with agent based models ABMs policy specialists concerned with the impact of AI and ML on society and civilization network scientists and engineers applied mathematicians e g holon theory information theory computational linguists and blockchain scientists and engineers Discusses the foundations metrics and applications of human machine systems Considers advances and challenges in the performance of autonomous machines and teams of humans Debates theoretical human machine ecosystem models and what happens when machines malfunction **Computational Context** William F. Lawless,Ranjeev Mittu,Donald Sofge,2018-12-07 This volume addresses context from three comprehensive perspectives first its importance the issues surrounding context and its value in the laboratory and the field second the theory guiding the AI used to model its context and third its applications in the field e g decision making This breadth poses a challenge The book analyzes how the environment context influences human perception cognition and action While current books approach context narrowly the major contribution of this book is to provide an in depth review over a broad range of topics for a computational context no matter its breadth The volume outlines numerous strategies and techniques from world class scientists who have adapted their research to solve different problems with AI in difficult environments and complex domains to address the many computational challenges posed by context Context can be clear uncertain or an illusion Clear contexts A father praising his child a trip to the post office to buy stamps a policewoman asking for identification Uncertain contexts A sneak attack a surprise witness in a courtroom a shout of Fire Fire Contexts as illusion Humans fall prey to illusions that machines do not Adelson s checkerboard illusion versus a photometer Determining context is not easy when disagreement exists interpretations vary or uncertainty reigns Physicists like Einstein relativity Bekenstein holographs and Rovelli universe have written that reality is not what we commonly believe Even outside of awareness individuals act differently whether alone or in teams Can computational context with AI adapt to clear and uncertain contexts to change over time and to individuals machines or robots as well as to teams If a program automatically knows the context that improves performance or decisions does it matter whether context is clear uncertain or illusory Written and edited by world class leaders from across the field of autonomous systems research this volume carefully considers the computational systems being constructed to determine

context for individual agents or teams the challenges they face and the advances they expect for the science of context

Action in Context Anton Leist,2012-02-13 The book illustrates the concept of action in three different contexts the justification of actions people s life history and pragmatism The special feature of this book is that a comprehensive view of this kind marks a departure from the atomistic approach of action theory which in itself raises a number of questions If actions are not justified by mental states how can persons then act for reasons How can persons actions over time be described and what is the connection with the question of personal identity If there is to be a unified understanding of the person does the practical have to take precedence over the theoretical and what does this mean for epistemology for example The ten contributors to this volume engage in an instructive manner with these and similar questions in the three sections of the book **Context in Communication: A Cognitive View** Gabriella Airenti,Marco Cruciani,Alessio Plebe,2017-04-03 Context is what contributes to interpret a communicative act beyond the spoken words It provides information essential to clarify the intentions of a speaker and thus to identify the actual meaning of an utterance A large amount of research in Pragmatics has shown how wide ranging and multifaceted this concept can be Context spans from the preceding words in a conversation to the general knowledge that the interlocutors supposedly share from the perceived environment to features and traits that the participants in a dialogue attribute to each other This last category is also very broad since it includes mental and emotional states together with culturally constructed knowledge such as the reciprocal identification of social roles and positions The assumption of a cognitive point of view brings to the foreground a number of new questions regarding how information about the context is organized in the mind and how this kind of knowledge is used in specific communicative situations A related very important question concerns the role played in this process by theory of mind abilities ToM both in typical and atypical populations In this Research Topic we bring together articles that address different aspects of context analysis from theoretical and empirical perspectives integrating knowledge and methods derived from Philosophy of language Linguistics Cognitive Science Cognitive Neuroscience Developmental and Clinical Psychology

Events of Art and Education in Post-climate Times Carl Anders Säfström,Glenn Loughran,2025-07-18 This book concerns the urgency of thinking and acting in response to climate change through art and education While both fields are often connected through disciplinary dialogues climate change prompts a greater need to unite artists and educators around common environmental problems and goals By staging transcritical engagements this book draws out common and uncommon disciplinary perspectives that can generate new ways of thinking living and doing in the Anthropocene Ideas around courage resilience life and death emerge An expression of active non violent resistance to the ongoing destruction of our planet this book supports imaginative action popular sovereignty and the courage to live well within the challenges of our era Engaging artists and educators questions it maps significant differences and potential intersections for further enquiry Events of Art and Education in Post climate Times will be helpful for students studying art education environment

sustainability and climate change It will also interest researchers practising artists and teachers in these disciplines by being at the forefront of current discussions in both fields   **Archaeological Theory** Matthew Johnson,2019-04-08 A lively and accessible introduction to themes and debates in archaeological theory for students of all levels Archaeological Theory is a relatable accessible reader friendly first step into the world of theory for archaeology students Recognizing that many students shy away from the study of theory for fear that the material is too difficult or obscure Archaeological Theory maintains that any student can develop an understanding of theory and that a knowledge of theory will lead to better practice As one of the leading texts for introductory courses in archaeology and archaeological theory it has provided many students with the essential foundation for a complete education in the discipline With a focus on clarifying the history and development of archaeological theory this valuable text serves as a roadmap to the different schools of theory in archaeology clarifying the foundations of these schools of thought the relationships between them and the ideas that distinguish each from the other Students will also learn about the relationship between archaeology and cultural and political developments the origins of New and post processual archaeology and current issues shaping the field Written in a clear and informal style and incorporating examples cartoons and dialogues this text provides an ideal introduction for students at all levels The revised third edition has been updated with new and revised chapters and an expanded glossary and bibliography as well as new readings to guide further study Engages readers with informal and easy to understand prose as well as examples cartoons and informal dialogues Prepares students to understand complex topics and current and perennial issues in the field such as epistemology agency and materiality in the context of archaeological practice Discusses current developments in associated disciplines New and revised chapters on the material turn politics and other issues and an expanded glossary and bibliography with updated reading suggestions Offers expanded coverage of materiality cultural historical archaeology evolutionary theory and the work of scholars of diverse backgrounds and specializations Engaging and illuminating Archaeological Theory is an indispensable resource for undergraduate and graduate students in archaeology and related disciplines   Liberating the Bible Thomas Calnan Sorenson,2015-10-27 Liberating the Bible offers readers a handbook to help them make their way through a front to back exploration of the riches contained in the Bible Thomas Calnan Sorenson blends scholarship with a down to earth presentation in a survey of the Bible that uncovers the basics of its many books and reveals the persuasive power of its messages to nurture faith expand understanding and deepen connections to God Liberating the Bible organizes its guidance into three parts In Approaching the Bible eleven stops on the tour investigate the basics of the Bible its status in the church methods for reading and interpreting it and the grounding of its claims The second part The Old Testament groups the books of this testament and covers over sixteen stops Each of the stops delves into a book or cluster of books examining historical background organization key passages and distinctive themes and messages The third part The New Testament provides similar guidance while making eleven stops along the way If you are one of the
