On Line Testing Workshop:

Testing Software and Systems Brian Nielsen, Carsten Weise, 2012-11-14 This book constitutes the refereed proceedings of the 24th IFIP WG 6.1 International Conference on Testing Software and Systems ICTSS 2012 held in Aalborg Denmark in November 2012. The 16 revised full papers presented together with 2 invited talks were carefully selected from 48 submissions. The papers are organized in topical sections on testing in practice, test frameworks for distributed systems, testing of embedded systems, test optimization, and new testing methods.

Training on the Web, 2002 Soldiers who receive training in the workplace at their residences or at other sites outside the traditional classroom increasingly rely upon asynchronous distributed learning systems. This accentuates the need to identify various forms of training compromise such as obtaining questions beforehand or enlisting a proxy for test taking in non-proctored web-based learning environments. A one-day workshop summarized in this report was conducted to identify practical solutions to training compromise on the Web or military intranets. Experts from government, academia, and industry generated solutions in the areas of test security, biometrics including fingerprint identification, face recognition, iris scanning, and hand writing recognition, legal issues, public key infrastructure, instructional design, and test design. Following the workshop, an Army advisory group prioritized the solutions into a final list of recommendations included here as a starting point for addressing and preventing training compromise.
