

TOWARDS A GLOBAL CURRENCY? CONDITION AND SCENARIOS FOR EVOLUTION OF THE INTERNATIONAL MONETARY ORDER

Karina Jędrzejowska*

University of Warsaw, Poland

Abstract. *The main goal of the paper is to examine the key features of the current international monetary system and provide an overview of scenarios for the future global monetary arrangements. It is noted that just a few years back there seemed to be a bipolar monetary system based on the U.S. dollar and the euro in the making. The rise of China and the possible emergence of the Chinese renminbi as an international currency gave way to a debate on a tripolar monetary system. Today, the future of the international monetary system is still open. It needs reforming in order to meet the requirements of the new global order with multiple growth centers, the growing role of transnational actors, and the increasing global influence of the major emerging economies.*

The analysis reveals that the relations among the major international currencies are changing, and today at least three scenarios for the future monetary order seem possible. These are the maintenance of the U.S. dollar domination, a shift towards a multipolar currency order, and the gradual regionalization of the currency order. The concept of a single currency – though theoretically attracting – seems impossible to be implemented in the foreseeable future. The analysis is based on monetary and economic theories, historical patterns of the development of monetary regimes, and an extensive literature overview backed by the data provided by the International Monetary Fund (IMF) and the Bank for International Settlements (BIS).

Key words: *global currency, international monetary system, euro, U.S. dollar, single currency*

I. Introduction

Since the financial crises of the 1990s, and the East Asian financial crisis (1997) in particular, the reform of the international monetary system has been in the forefront of the international policy debate. Although the weaknesses of the post-Bretton Woods international monetary order had been diagnosed long before, it was the global financial crisis of 2007–2008 (subprime crisis) that made the international community fully aware of changes undergoing in the system and its increasing instability. The deficiencies of the current monetary order appear to be present in most elements constituting the system and relate mostly to its ineffective governance and inability to provide an effective crisis prevention and management. The problem areas include the choice of exchange
