A Global Atlas of Atolls Walter M. Goldberg, Eugene C. Rankey, 2023-08-29

Scattered like dots rising from the deep across vast expanses of the world's tropical and subtropical oceans atolls with their turquoise lagoons and reefs teeming with colorful marine life have captured the public imagination. They have also been the homeland of millions of people for millennia as various groups of migrants spread across the far reaches of the Pacific Indian and Western Atlantic regions. Developed from recently available satellite data, *A Global Atlas of Atolls* presents high quality details of 476 atolls across the globe characterizing aspects of the atoll rim, the lagoon, and their coral reef communities in unprecedented detail. In synthesizing and enhancing understanding of these unique seascapes, this volume provides a distinct compendium of descriptions and images as well as documentation of the environmental conditions of winds, waves, and tides, and a summary of the background literature for each atoll area. There is no comparable work. After an introduction that includes a glossary of terms, each atoll is documented in the form of an atlas written for scientists but accessible to any diver or reader interested in these spectacular reef island habitats. This book also describes some current challenges and perspectives on their future. It will be useful as a reference work for marine scientists while providing a minimum of technical jargon for those who are not scientists but who enjoy reading about exotic places with unusual attributes. The Emergence of the Fourth Dimension Mark Blacklock, 2018-04-05

The Emergence of the Fourth Dimension describes the development and proliferation of the idea of higher dimensional space in the late nineteenth and early twentieth centuries. An idea from mathematics that was appropriated by occultist thought, it emerged in the fin de siècle as a staple of genre fiction and influenced a number of important Modernist writers and artists. Providing a context for thinking of space in dimensional terms, the volume describes an active interplay between self-fashioning disciplines and a key moment in the popularisation of science. It offers new research into spiritualism and the Theosophical Society and studies a series of curious hybrid texts. Examining works by Joseph Conrad, Ford Madox Ford, H. G. Wells, Henry James, H. P. Lovecraft, and others, the volume explores how new theories of the possibilities of time and space influenced fiction writers of the period and

how literature shaped and was in turn shaped by the reconfiguration of imaginative space occasioned by the n dimensional turn A timely study of the interplay between philosophy literature culture and mathematics it offers a rich resource for readers interested in nineteenth century literature Modernist studies science fiction and gothic scholarship Presbyterian Banner ,1909 **Annual Report of the Board of Regents of the Smithsonian Institution** Smithsonian Institution. Board of Regents,1869 **NOAA** ,1975
