Restoration of Boreal and Temperate Forests John A. Stanturf, 2004-12-28 While the commitment to protect and restore forest ecosystems has become a policy goal in many countries since the Rio Conference there is still no general consensus on what constitutes restoration This authoritative reference presents the best practices for fostering increased sustainability enhancing biodiversity and repairing ecosystem func

A Goal-Oriented Approach to Forest Landscape Restoration

John Stanturf,Palle Madsen,David Lamb,2012-12-05 While restoration ecology has traditionally aimed to re create some putative more natural ecological state forest landscape restoration FLR has emerged over the last decade as an approach aimed more at restoring natural functions while focusing on meeting human needs With a view to exploring the practical potential of this approach this book draws together a team of experts from the natural and social sciences to discuss its success so far in addressing critical issues such as biodiversity ecological function and human livelihoods Applying principles of landscape ecology restoration ecology planning theory and conflict management the book presents a series of case studies which document the approach and discusses how the approach can help with priority setting for the future The book will provide a valuable reference to graduate students and researchers interested in ecological restoration forest ecology and management as well as to professionals in environmental restoration natural resource management conservation and environmental policy

Afforestation, Reforestation and Forest Restoration in Arid and Semi-arid Tropics

A Guide to Native Plants of the New York City Region Margaret Gargiullo,2007-06-28 It is no secret that with each new office park strip mall and housing

development that slices through the New York New Jersey and Connecticut landscape more and more indigenous plant habitats are being destroyed Concrete after all is not a friendly neighbor to vegetative life Less common wisdom however holds that plants native to this region have been disappearing rapidly for a variety of reasons and some of the causes can be avoided even as construction projects continue to move in One of the most serious threats to indigenous plants is the introduction of invasive non native species by landscapers after new developments are built In this unique guide ecologist Margaret B Gargiullo presents a detailed look at the full scope of flora that is native to this region and available for propagation Geared specifically for landscape architects designers land managers and restorationists this book offers practical advice on how to increase the amount of indigenous flora growing in the metropolitan area and in some cases to reintroduce plants that have completely disappeared More than one hundred line drawings of plants and their specific habitats ranging from forests to beaches help readers visualize the full potential for landscaping in the area A separate entry for each plant also provides detailed information on size flower color blooming time and its possible uses in wetland mitigation erosion control and natural area restoration Some plants are also highlighted for their ability to thrive in areas that are typically considered inhospitable to greenery Easily searchable by plant type or habitat this guide is an essential reference for everyone concerned with the region's natural plant life Since most of the plants can also be grown well beyond the New York City metropolitan area this book will also be useful for project managers doing restoration work in most of southern New England and the mid Atlantic region including Pennsylvania Delaware and Maryland

Invasive Plants and Forest Ecosystems Ravinder Kumar Kohli, Shibu Jose, Harminder Pal Singh, Daizy Rani Batish, 2008-09-09 As the worldwide human population explodes and trade becomes increasingly globalized the transboundary movement of plant species from their place of origin to foreign regions is escalating and expected to experience continued growth in the coming decades Invasive non native species pose one of the greatest challenges for natural resource managers who are charged with the maintenance of biological diversity and the sustainable production of forest resources With international contributors presenting an informed and integrated approach to the control of havoc wrecking species **Invasive Plants and Forest Ecosystems** provides the most updated information on invading plants their impacts on forest ecosystems and control strategies This text addresses such important issues as the socioeconomic and policy aspects of plant invasion and offers complete coverage of their ecological impacts and the varied levels of threats in diverse situations

Introduction to Green Chemistry John Andraos, Albert S. Matlack, 2022-03-10 Interest in green chemistry and clean processes has grown so much in recent years that topics such as fluororous biphasic catalysis metal organic frameworks and process intensification which were barely mentioned in the First Edition have become major areas of research In addition government funding has ramped up the development of fuel cells and biofuels This reflects the evolving focus from pollution remediation to pollution prevention Copiously illustrated with more than 800 figures the Third Edition provides an update from the frontiers of the

field It features supplementary exercises at the end of each chapter relevant to the chemical examples introduced in each chapter Particular attention is paid to a new concluding chapter on the use of green metrics as an objective tool to demonstrate proof of synthesis plan efficiency and to identify where further improvements can be made through fully worked examples relevant to the chemical industry

NEW AND EXPANDED RESEARCH TOPICS Metal organic frameworks Metrics Solid acids for alkylation of isobutene by butanes Carbon molecular sieves Mixed micro and mesoporous solids Organocatalysis Process intensification and gas phase enzymatic reactions Hydrogen storage for fuel cells Reactive distillation Catalysts in action on an atomic scale

UPDATED AND EXPANDED CURRENT EVENTS TOPICS Industry resistance to inherently safer chemistry Nuclear power Removal of mercury from vaccines Removal of mercury and lead from primary explosives Biofuels Uses for surplus glycerol New hard materials to reduce wear Electronic waste Smart growth The book covers traditional green chemistry topics including catalysis benign solvents and alternative feedstocks It also discusses relevant but less frequently covered topics with chapters such as Chemistry of Long Wear and Population and the Environment This coverage highlights the importance of chemistry to everyday life and demonstrates the benefits the expanded exploitation of green chemistry can have for society

Ecological Restoration in the Midwest Christian Lenhart, Peter C. Smiley, Jr., 2018-06-01 Most people do not realize it but the Midwest has been at the forefront of ecological restoration longer than perhaps any other region in the United States dating back to the 1930s Because of its industrial history agricultural productivity and natural features such as the Great Lakes the Midwest has always faced a unique set of ecological challenges Focusing on six cutting edge case studies that highlight thirty restoration efforts and research sites throughout the region Iowa Indiana Illinois Wisconsin Michigan Minnesota and Ohio editors Christian Lenhart and Peter Rocky Smiley Jr bring together a group of scholars and practitioners to show how midwestern restoration efforts have developed as well as where they are headed Whether cleaning up contamination from auto plants in Ohio or restoring native prairie grasses along the Iowa highway the contributors uncover a vast network of interested citizens and volunteer groups committed to preserving the region's environment This study intended for researchers students and practitioners also provides an updated synthesis of restoration theory and practice and pinpoints emerging issues of importance in the Midwest such as climate change and the increase in invasive species it will bring to the region Though focusing exclusively on the Midwest the contributors demonstrate how these case studies apply to restoration efforts across the globe Contributors Luther Aadland David P Benson Andrew F Casper Hua Chen Joe DiMisa Steve Glass Heath M Hagy John A Harrington Neil Haugerud Constance Hausman Michael J Lemke Christian Lenhart Jen Lyndall Dan Shaw John A Shuey Peter C Smiley Jr Daryl Smith

The Restoration Economy Storm Cunningham, 2002-11-02 A landmark work I was relieved to see that there is a good and reasonable solution to the ruinous policies of unbridled new development Mark Stewart CEO iAccess Communications The Restoration Economy reveals the previously undocumented trillion dollar global industries that are

restoring our natural and manmade environments Restorative development is rapidly overtaking new development because we are running out of things to develop Most natural areas are already either farmed or degraded and cities have built all the way to their borders However there is no lack of things to redevelop and restore Storm Cunningham surveys the wide range of restoration industries and points out the connections among them He shows for example how the restoration of a river ecosystem can have a major impact on the commercial success of a redeveloped historic urban waterfront Written for a broad range of audiences The Restoration Economy is an entertaining blend of business science and economics that details exciting new business and investment opportunities in this dynamic economic sector Any companies or consultants looking for new markets must read The Restoration Economy Pamela J Gordon CMC President Technology Forecasters Inc The Restoration Economy is required reading here at Weston Solutions It has been indispensable in helping us refocus our strategy Bill Robertson Chairman Weston Solutions The Restoration Economy is without a doubt the most important and valuable business book I have read in many years Don Pross Urban Revitalization Planner This book is an original a first I profited from it greatly and I quote from it in my speeches William H Hudnut III Former Four Term Mayor of Indianapolis

Ecology of Tidal Freshwater Forested Wetlands of the Southeastern United States William H. Conner, Thomas W. Doyle, Ken W. Krauss, 2007-06-24 Tidal freshwater forested wetlands represent an intriguing and understudied type of ecosystem in the southeastern United States The phy geographic position of tidal freshwater forested wetlands in occupying low lying coastal areas makes them susceptible to upland runoff tidal flooding saltwater intrusion and other global climate change phenomena While information on them is rather sparse in the scientific literature these ecosystems are among the most sensitive to sea level rise and increased drought or flood frequency Tidal freshwater forested wetlands are readily impacted by acute and chronic exposure to even low levels of salinity The combined stress of flooding and salinity may compound the threat in these systems such that the margin for survival and compensation to changing climate is much less than for other coastal habitats In this book we bring together principal investigators whose research focus has targeted the hydrology biogeochemistry community ecology forestry stress physiology and restoration of tidal freshwater forested wetlands in the southeastern United States It is our foremost intent to develop an up to date treatise that includes not only peer reviewed journal articles but also the dispersive grey literature on the topic in order to spark future research interest in tidal freshwater forested wetlands and to provide land managers with a concise overview of research findings We have thus formalized all scientific and common names into the standard of ITIS Integrated Taxonomic Information System <http://www.itis>

The Sunflower Forest William R. Jordan, 2012-02-07 Ecological restoration the attempt to guide damaged ecosystems back to a previous usually healthier or more natural condition is rapidly gaining recognition as one of the most promising approaches to conservation In this book William R Jordan III who coined the term restoration ecology and who is widely respected as an intellectual leader in the field outlines a vision for a restoration based environmentalism that has emerged

from his work over twenty five years Drawing on a provocative range of thinkers from anthropologists Victor Turner Roy Rappaport and Mary Douglas to literary critics Frederick Turner Leo Marx and R W B Lewis Jordan explores the promise of restoration both as a way of reversing environmental damage and as a context for negotiating our relationship with nature Exploring restoration not only as a technology but also as an experience and a performing art Jordan claims that it is the indispensable key to conservation At the same time he argues restoration is valuable because it provides a context for confronting the most troubling aspects of our relationship with nature For this reason it offers a way past the essentially sentimental idea of nature that environmental thinkers have taken for granted since the time of Emerson and Muir

Healing Appalachia Al Fritsch, Paul Gallimore, 2007-05-11 Healing Appalachia is a practical guide for environmentally conscious residents of Appalachia and beyond It is also the first book to apply appropriate technology or the most basic technology that can effectively achieve the desired result to this specific region Authors Al Fritsch and Paul Gallimore have performed over 200 environmental resource assessments in thirty three states They bring this knowledge to bear as they examine thirty low cost people friendly and environmentally benign appropriate technologies that can be put to work today in Appalachia They discuss such issues as renewable energy and energy conservation food preservation and gardening forest management land use transportation water conservation proper waste disposal and wildlife protection They pay close attention to the practicality of each technique according to affordability ease of use and ecological soundness Their subjects range from solar home heating to greenhouses from aquaculture to compost toilets from organic gardening to wildlife restoration and enhancement and from solar cars to microhydropower facilities Their discussions of each topic benefit from the knowledge gained from thirty years of practical experience at environmental demonstration centers and public interest and educational organizations Each section of the book includes details on construction and maintenance as well as resources for locating further information making this an essential volume for everyone who cares about the future of Appalachia

Becoming Good Ancestors David Ehrenfeld, 2008-11-04 A brilliant writer and gifted big picture thinker David Ehrenfeld is one of America's leading conservation biologists *Becoming Good Ancestors* unites in a single up to date framework pieces written over two decades spanning politics ecology and culture and illuminating the forces in modern society that thwart our efforts to solve today's hard questions about society and the environment The book focuses on our present day retreat from reality our alienation from nature our unthinking acceptance of new technology and rejection of the old the loss of our ability to discriminate between events we can control and those we cannot the denial of non economic values and the decline of local communities If we are aware of what we are losing and why we are losing it the author notes all of these patterns are reversible Through down to earth examples ranging from a family canoe trip in the wilderness to the novels of Jane Austen to Chinese turtle and tiger farms Ehrenfeld shows how we can use what we learn to move ourselves and our society towards a more stable less frantic and far more satisfying life a life in which we are no longer compelled to damage ourselves and our environment in which our children have a future and in which fewer species are endangered and more rivers run clean In the final chapter he offers a dramatic view of the possibilities inherent in a fusion of the best elements of conservatism and liberalism Our society has an inherent sense of what is right says Ehrenfeld and the creativity and persistence to make good things happen It is now time to apply our intelligence guided by our moral judgment to the very large problems we all face This book is an important first step

Integrating Biological Control into Conservation Practice Roy van Driesche, Daniel Simberloff, Bernd Blossey, Charlotte Causton, Mark Hoddle, Christian O. Marks, Kevin M. Heinz, David L. Wagner, Keith D. Warner, 2016-05-17 Invasive species have a critical and growing effect upon natural areas They can modify degrade or destroy wildland ecosystem structure and function and reduce native biodiversity Landscape level solutions are needed to address these problems Conservation biologists seek to limit such damage and restore ecosystems using a variety of approaches One such approach is biological control the deliberate importation and establishment of specialized natural enemies which can address invasive species problems and which should be considered as a possible component of restoration Biological control can be an effective tool against many invasive insects and plants but it has rarely been successfully employed against other groups Safety is of paramount concern and requires that the natural enemies used be specialized and that targeted pests be drivers of ecological degradation While modern approaches allow species to be selected with a high level of security some risks do remain However as in all species introductions these should

be viewed in the context of the risk of failing to reduce the impact of the invasive species This unique book identifies the balance among these factors to show how biological control can be integrated into ecosystem restoration as practiced by conservation biologists Jointly developed by conservation biologists and biological control scientists it contains chapters on matching tools to management goals tools in action measuring and evaluating ecological outcomes of biological control introductions managing conflict over biological control and includes case studies as well as an ethical framework for integrating biological control and conservation practice Integrating Biological Control into Conservation Practice is suitable for graduate courses in invasive species management and biological control as well as for research scientists in government and non profit conservation organizations
