Reddy,Alexandra Anderson,Corby G. Anderson,Camille Fleuriault,Erik D. Spiller,Mark Strauss,Edgar E. Vidal,Mingming Zhang,2023-02-13 This collection addresses new research and technology for increased efficiency energy reduction and waste minimization in mineral processing extractive metallurgy and recycling Professor Patrick R Taylor and his students have been studying these topics for the past 45 years Chapters include new directions in Mineral Processing Hydrometallurgy Pyrometallurgy Electrometallurgy Metals and E waste recycling Waste minimization including by product recovery Innovations in metallurgical engineering education and curriculum development Energy Research Abstracts ,1989 *Phytoremediation Potential of Medicinal and Aromatic Plants* Amit Kumar,Kuldeep Baudh,Sudhakar Srivastava,2023-10-31 Environmental contamination of heavy metals is a major problem threatening sustainable agricultural production and health of millions of people The extensive distribution of heavy metals in soil and water makes it necessary to employ environment friendly low cost and sustainable approaches for the remediation of contaminated sites Phytoremediation has been considered a viable approach to meet these demands however it must provide some economic gains too The use of economically important medicinal and aromatic plants is helpful in restoration of metal contaminated sites and also may provide economic gains to the farmers The book brings about a critical overview of the prospects of utilizing medicinal and aromatic plants in phytoremediation including their utility economic benefits and human safety issues The book will be a timely addition to the field and would act as landmark This book is of interest to teachers researchers doctoral and graduate students working in the area of environmental pollution and cleanup technologies The students working in the field of metal loid stress and crop biofortification will also find this to be a useful read The content of the book is presented in simple language and represented through beautiful and scientifically informative figures and tables

Soil Components and Human Health Rolf Nieder, Dinesh K. Benbi, Franz X. Reichl, 2018-01-10 This volume highlights important links existing between soils and human health which up to now are not fully realized by the public Soil materials may have deleterious beneficial or no impacts on human health therefore understanding the complex relationships between diverse soil materials and human health will encourage creative cooperation between soil and environmental sciences and medicine The topics covered in this book will be of immense value to a wide range of readers including soil scientists medical scientists and practitioners nursing scientists and staff toxicologists ecologists agronomists geologists geochemists public health professionals planners and several others

Water Security: Big Data-Driven Risk Identification, Assessment and Control of Emerging Contaminants Bin Liang, Shu-Hong Gao, Hongcheng Wang, 2024-06-12 Water Security Big Data Driven Risk Identification Assessment and Control of Emerging Contaminants contains the latest information on big data driven risk detection and analysis risk assessment and environmental health effect intelligent risk control technologies and global control strategy of emerging contaminants First this book highlights advances and challenges throughout the detection of emerging chemical contaminants e g antimicrobials microplastics by sensors or mass spectrometry as well as emerging biological contaminant e g ARGs pathogens by a combination of next and third generation sequencing technologies in aquatic environment Second it discusses in depth the ecological risk assessment and environmental health effects of emerging contaminants Lastly it presents the most up to date intelligent risk management technologies This book shares instrumental global strategy and policy analysis on how to control emerging contaminants Offering interdisciplinary and global perspectives from experts in environmental sciences and engineering environmental microbiology and microbiome environmental informatics and bioinformatics intelligent systems and knowledge engineering this book provides an accessible and flexible resource for researchers and upper level students working in these fields Covers the detection high throughput analyses and environmental behavior of the typical emerging chemical and biological contaminants Focuses on chemical and biological big data driven aquatic ecological risk assessment models and techniques Highlights the intelligent management and control technologies and policies for emerging contaminants in water environments

Direct Analysis in Real Time Mass Spectrometry Yiyang Dong, 2017-11-29 Clear comprehensive and state of the art the groundbreaking book on the emerging technology of direct analysis in real time mass spectrometry Written by a noted expert in the field Direct Analysis in Real Time Mass Spectrometry offers a review of the background and the most recent developments in DART MS Invented in 2005 DART MS offers a wide range of applications for solving numerous analytical problems in various environments including food science forensics and clinical analysis The text presents an introduction to the history of the technology and includes information on the theoretical background for example on the ionization mechanism Chapters on sampling and coupling to

different types of mass spectrometers are followed by a comprehensive discussion of a broad range of applications Unlike most other ionization methods DART does not require laborious sample preparation as ionization takes place directly on the sample surface This makes the technique especially attractive for applications in forensics and food science Comprehensive in scope this vital text Sets the standard on an important and emerging ionization technique Thoroughly discusses all the relevant aspects from instrumentation to applications Helps in solving numerous analytical problems in various applications for example food science forensics environmental and clinical analysis Covers mechanisms coupling to mass spectrometers and includes information on challenges and disadvantages of the technique Academics analytical chemists pharmaceutical chemists clinical chemists forensic scientists and others will find this illuminating text a must have resource for understanding the most recent developments in the field

Microbes and Microbial Biotechnology for Green Remediation Junaid Ahmad Malik,2022-06-14 Microbes and Microbial Biotechnology for Green Remediation provides a comprehensive account of sustainable microbial treatment technologies The research presented highlights the significantly important microbial species involved in remediation the mechanisms of remediation by various microbes and suggestions for future improvement of bioremediation technology The introduction of contaminants due to rapid urbanization and anthropogenic activities into the environment causes unsteadiness and distress to the physicochemical systems including living organisms Hence there is an immediate global demand for the diminution of such contaminants and xenobiotics which can otherwise adversely affect the living organisms Over time microbial remediation processes have been accelerated to produce better eco friendlier and more biodegradable products for complete dissemination of these xenobiotic compounds The advancements in microbiology and biotechnology lead to the launch of microbial biotechnology as a separate area of research and contributed dramatically to the development of the areas such as agriculture environment biopharmaceutics and fermented foods Microbes stand as an imperative efficient green and economical alternative to conventional treatment technologies The proposed book provides cost effective and sustainable alternatives This book serves as a reference for graduate and postgraduate students in environmental biotechnology and microbiology as well as researchers and scientists working in the laboratories and industries involved in research related to microbiology environmental biotechnology and allied research Discusses important microbial activities such as biofertilizer biocontrol biosorption biochar biofilm biodegradation bioremediation bioclogging and quorum sensing

Covers all the advanced microbial bioremediation techniques which are finding their way from the laboratory to the field for revival of the degraded agro ecosystems Examines the role of bacteria fungi microalgae *Bacillus* sp *Prosopis juliflora* *Deinococcus radiodurans* *Pseudomonas* methanotrophs siderophores and PGPRs as the biocontrol and green remediation agents for soil sustainability
