Advances in Decision Making Under Risk and Uncertainty Mohammed Abdellaoui, John D. Hey, 2008-09-17 Whether we like it or not we all feel that the world is uncertain From choosing a new technology to selecting a job we rarely know in advance what outcome will result from our decisions Unfortunately the standard theory of choice under uncertainty developed in the early forties and fifties turns out to be too rigid to take many tricky issues of choice under uncertainty into account The good news is that we have now moved away from the early descriptively inadequate modeling of behavior This book brings the reader into contact with the accomplished progress in individual decision making through the most recent contributions to uncertainty modeling and behavioral decision making It also introduces the reader into the many subtle issues to be resolved for rational choice under uncertainty

Risk, Uncertainty and Policy Patrick Brown, Anna Olofsson, 2017-10-02 Policy making has always involved uncertainty however the presence of unknowns has become far more conspicuous and problematic in recent times One important way in which policy makers have increasingly sought to deal with such uncertainty is through approaches rooted in understandings of risk This book comprises a rather diverse collection of six chapters alongside one more explicitly theoretical introduction each taking up a distinct perspective in scrutinising the relationship between policy risk and uncertainty Important concerns addressed within these different studies include how risk governance policies are shaped by risk awareness or a lack thereof and the mediating role of trust the framing of policy through an emphasis on particular risks and the corresponding impact on societal beliefs discourses and institutional power the organisational processes which lead to some risks being tackled while others are neglected and processes of de politicising uncertainty at the interface between scientists and policy makers Contributors explore trans national institutions national bodies and local government within diverse geographical contexts including China Brazil the Baltic Sea Australia the UK and Europe This book was originally published as a special issue of the Journal of Risk Research

Carlo C. Jaeger, Thomas Webler, Eugene A. Rosa, Ortwin Renn, 2013-11-05 Risk as we now know it is a wholly new phenomenon the by product of our ever more complex and powerful technologies In business policy making and in everyday life it demands a new way of looking at technological and environmental uncertainty In this definitive volume four of the world s leading risk researchers present a fundamental critique of the prevailing approaches to understanding and managing risk the rational actor paradigm They show how risk studies must incorporate the competing interests values and rationalities of those involved and find a balance of trust and acceptable risk Their work points to a comprehensive and significant new theory of risk and uncertainty and of the decision making process they require The implications for social political and environmental theory and practice are enormous Winner of the 2000 2002 Outstanding Publication Award of the Section on Environment and Technology of the American Sociological Association *Management Principles* P. J. Smit, 2007 Book CD To improve on an award winning book poses a major challenge to its authors The authors of this book took the challenge head on by conducting a major research study to determine what exactly the outcomes are that managers at different levels must deliver in contemporary organisations in South Africa and the rest of Africa The findings of this study which dealt with current and near future management issues as well as classical and contemporary thinking about management were used as the blueprint for the updating of this book After placing management in context the authors deal with the knowledge skills and dispositions required of managers to perform the management functions of planning organising leading and controlling in a volatile business world Examples of how the functions are applied in practice are cited throughout the book These examples refer mainly to South African organisations and situations that managers in South Africa and Africa have to deal with to create and sustain a competitive advantage for their organisations The book endeavours to break down the silo effect of seeing the management functions as separate activities This is done by continuously placing the management function at hand in a bigger context This enables learners of management to assess the implications of management decisions on different people processes systems and so on that make up the organisation

Conroy, James T. Peterson, 2013-03-18 This book is intended for use by natural resource managers and scientists and students

in the fields of natural resource management ecology and conservation biology who are confronted with complex and difficult decision making problems The book takes readers through the process of developing a structured approach to decision making by firstly deconstructing decisions into component parts which are each fully analyzed and then reassembled to form a working decision model The book integrates common sense ideas about problem definitions such as the need for decisions to be driven by explicit objectives with sophisticated approaches for modeling decision influence and incorporating feedback from monitoring programs into decision making via adaptive management Numerous worked examples are provided for illustration along with detailed case studies illustrating the authors experience in applying structured approaches There is also a series of detailed technical appendices An accompanying website provides computer code and data used in the worked examples Additional resources for this book can be found at www.wiley.com/go/conroy_naturalresourcemanagement
