The Magnetospheric Cusps: Structure and Dynamics Theodore A. Fritz, Shing F. Fung, 2005-09-19 Reprinted from *Surveys in geophysics* volume 26 1 3 2005 [The Magnetospheric Cusps](#) ,2005 [The Magnetospheric Cusps: Structure and Dynamics](#) Theodore A. Fritz, Shing F. Fung, 2006-02-23 This collection of papers will address the question What is the Magnetospheric Cusp and what is its role in the coupling of the solar wind to the magnetosphere as well as its role in the processes of particle transport and energization within the magnetosphere The cusps have traditionally been described as narrow funnel shaped regions that provide a focus of the Chapman Ferraro currents that flow on the magnetopause a boundary between the cavity dominated by the geomagnetic field i e the magnetosphere and the external region of the interplanetary medium Measurements from a number of recent satellite programs have shown that the cusp is not confined to a narrow region near local noon but appears to encompass a large portion of the dayside high latitude magnetosphere and it appears that the cusp is a major source region for the production of energetic charged particles for the magnetosphere Audience This book will be of interest to space science research organizations in governments and industries the community of Space Physics scientists and university departments of physics astronomy space physics and geophysics [Special Issue on the Magnetospheric Cusps: Structure and Dynamics](#) Theodore A. Fritz, American Geophysical Union, Spring Meeting entitled Turbulence and Dynamics at the High Altitude Cusp and Dayside Magnetopause Boundary Layer, 2005 **Advances in Global Magnetospheric Structure, Dynamics, and Region Coupling** COSPAR. Scientific Assembly, 2002 *Earth's Magnetosphere* Wayne Keith, Walter Heikkila, 2020-11-24 *Earth's Magnetosphere Formed by the Low Latitude Boundary Layer* Second Edition provides a fully updated overview of both historical and current data related to the magnetosphere and how it is formed With a focus on experimental data and space missions the book goes in depth relating space physics to the Earth's magnetosphere and its interaction with the solar wind Starting with Newton's law this book also examines Maxwell's equations and subsidiary equations such as continuity constitutive relations and the Lorentz transformation Helmholtz theorem and Poynting's theorem among other methods for understanding this interaction This new edition of *Earth's Magnetosphere* is updated with information on such topics as 3D reconnection space weather implications recent missions such as MMS ionosphere outflow and coupling and the inner magnetosphere With the addition of end of chapter problems as well this book is an excellent foundational reference for geophysicists space physicists plasma physicists and graduate students alike Offers an historical perspective of early magnetospheric research combined with progress up to the present Describes observations from various spacecraft in a variety of regions with explanations and discussions of each Includes chapters on prompt particle acceleration to high energies plasma transfer event and the low latitude boundary layer

Earth's Magnetosphere Walter Heikkila, 2011-08-13 The author argues that after five decades of debate about the interactive of solar wind with the magnetosphere it is time to get back to basics Starting with Newton's law this book also

examines Maxwell's equations and subsidiary equations such as continuity constitutive relations and the Lorentz transformation Helmholtz theorem and Poynting's theorem among other methods for understanding this interaction Includes chapters on prompt particle acceleration to high energies plasma transfer event and the low latitude boundary layer More than 200 figures illustrate the text Includes a color insert

Plasma Sources of Solar System Magnetospheres Andrew F. Nagy, Michel Blanc, Charles Chappell, Norbert Krupp, 2016-01-27 This volume reviews what we know of the corresponding plasma source for each intrinsically magnetized planet Plasma sources fall essentially in three categories the solar wind the ionosphere both prevalent on Earth and the satellite related sources Throughout the text the case of each planet is described including the characteristics chemical composition and intensity of each source The authors also describe how the plasma generated at the source regions is transported to populate the magnetosphere and how it is later lost To summarize the dominant sources are found to be the solar wind and sputtered surface ions at Mercury the solar wind and ionosphere at Earth the relative importance of the two being discussed in a specific introductory chapter Io at Jupiter and a big surprise of the Cassini findings Enceladus at Saturn The situation for Uranus and Neptune which were investigated by only one fly by each is still open and requires further studies and exploration In the final chapter the book offers a summary of the little we know of Uranus and Neptune then summarizes in a comparative way what we know of plasma sources throughout the solar system and proposes directions for future research
