Neural Networks and Pattern Recognition Omid Omidvar, Judith Dayhoff, 1997-10-29 This book is one of the most up to date and cutting edge texts available on the rapidly growing application area of neural networks Neural Networks and Pattern Recognition focuses on the use of neural networks in pattern recognition a very important application area for neural networks technology The contributors are widely known and highly respected researchers and practitioners in the field Features neural network architectures on the cutting edge of neural network research Brings together highly innovative ideas on dynamical neural networks Includes articles written by authors prominent in the neural networks research community Provides an authoritative technically correct presentation of each specific technical area

Neural Networks in Pattern Recognition and Their Applications Chi-hau Chen, 1991 The revitalization of neural network research in the past few years has already had a great impact on research and development in pattern recognition and artificial intelligence Although neural network functions are not limited to pattern recognition there is no doubt that a renewed progress in pattern recognition and its applications now critically depends on neural networks This volume specially brings together outstanding original research papers in the area and aims to help the continued progress in pattern recognition and its applications

Neural Networks for Pattern Recognition Albert Nigrin, 1993 In a simple and accessible way it extends embedding field theory into areas of machine intelligence that have not been clearly dealt with before Neural Networks for Pattern Recognition takes the pioneering work in artificial neural networks by Stephen Grossberg and his colleagues to a new level In a simple and accessible way it extends embedding field theory into areas of machine intelligence that have not been clearly dealt with before Following a tutorial of existing neural networks for pattern classification Nigrin expands on these networks to present fundamentally new architectures that perform realtime pattern classification of embedded and synonymous patterns and that will aid in tasks such as vision speech recognition sensor fusion and constraint satisfaction Nigrin presents the new architectures in two stages First he presents a network called Sonnet 1 that already achieves important properties such as the ability to learn and segment continuously varied input patterns in real time to process patterns in a context sensitive fashion and to learn new patterns without degrading existing categories He then removes simplifications inherent in Sonnet 1 and introduces radically new architectures These architectures have the power to classify patterns that may have similar meanings but that have different external appearances synonyms They also have been designed to represent patterns in a distributed fashion both in short term and long term memory
