Brain Injury and Recovery C. Robert Almli, Stanley Finger, T.E. LeVere, Donald G. Stein, 2012-12-06 The idea for the present volume grew from discussions that the four of us had among ourselves and with our colleagues at recent scientific meetings All of us were impressed by the wealth of empirical data that was being generated by investigators interested in brain damage and recovery from both behavioral and biological orientations Nevertheless we were concerned about the relative paucity of attempts to evaluate the data provided by new technologies in more than a narrow context or to present new theories or reexamine time honored ideas in the light of new

findings We recognized that science is guided by new technologies by hard data and by theories and ideas Yet we were forced to conclude that although investigators were often anxious to publicize new methods and empirical findings the same could not be said about broad hypotheses underlying concepts or inferences and speculations that extended beyond the empirical data Not only were many scientists not formally discussing the broad implications of their data but when stimulating ideas were presented they were more likely to be heard in the halls or over a meal than in organized sessions at scientific meetings

Applications of Neural Adaptive Control Technology Jens Kalkkuhl, Rafal Zbikowski, 1997 This book presents the results of the second workshop on Neural Adaptive Control Technology NACT II held on September 9-10 1996 in Berlin The workshop was organised in connection with a three year European Union funded Basic Research Project in the ESPRIT framework called NACT a collaboration between Daimler Benz Germany and the University of Glasgow Scotland The NACT project which began on 1 April 1994 is a study of the fundamental properties of neural network based adaptive control systems Where possible links with traditional adaptive control systems are exploited A major aim is to develop a systematic engineering procedure for designing neural controllers for nonlinear dynamic systems The techniques developed are being evaluated on concrete industrial problems from within the Daimler Benz group of companies The aim of the workshop was to bring together selected invited specialists in the fields of adaptive control nonlinear systems and neural networks The first workshop NACT I took place in Glasgow in May 1995 and was mainly devoted to theoretical issues of neural adaptive control Besides monitoring further development of theory the NACT II workshop was focused on industrial applications and software tools This context dictated the focus of the book and guided the editors in the choice of the papers and their subsequent reshaping into substantive book chapters Thus with the project having progressed into its applications stage emphasis is put on the transfer of theory of neural adaptive engineering into industrial practice The contributors are therefore both renowned academics and practitioners from major industrial users of neurocontrol

The Neuropsychology

of Attention Ronald A. Cohen, 2013-03-09 As you read this you are probably unaware of how your left foot feels in your shoe Although your brain was receiving sensory input from this foot you were not aware of your foot because you were reading and not attending to it However this discussion led you to move your attention to your left foot and to become aware of it When I was a medical student I saw a patient who was unaware of both the left side of his body and the left side of his environment Unlike people in normal health who when instructed can become aware of the left side of the body this patient

could not be made aware of his left arm or the left side of his environment The patient's defect was so profound that despite being hungry he was unaware of food on the left side of his tray and did not recognize that his left arm belonged to him This left sided body and spatial unawareness could not be accounted for by a primary sensory defect Although I knew that this man suffered from a large right hemisphere stroke I did not know the brain mechanisms that accounted for this profound example of unawareness It was not until I had almost completed my neurology training in 1969 that I was able to return to this problem At that time most neuropsychological research was directed at understanding the language disorders associated with brain disease

Deterministic Artificial Intelligence Timothy Sands, 2020-05-27 Kirchhoff's laws give a mathematical description of electromechanics Similarly translational motion mechanics obey Newton's laws while rotational motion mechanics comply with Euler's moment equations a set of three nonlinear coupled differential equations Nonlinearities complicate the mathematical treatment of the seemingly simple action of rotating and these complications lead to a robust lineage of research culminating here with a text on the ability to make rigid bodies in rotation become self aware and even learn This book is meant for basic scientifically inclined readers commencing with a first chapter on the basics of stochastic artificial intelligence to bridge readers to very advanced topics of deterministic artificial intelligence espoused in the book with applications to both electromechanics e.g. the forced van der Pol equation and also motion mechanics i.e. Euler's moment equations The reader will learn how to bestow self awareness and express optimal learning methods for the self aware object e.g. robot that require no tuning and no interaction with humans for autonomous operation The topics learned from reading this text will prepare students and faculty to investigate interesting problems of mechanics It is the fondest hope of the editor and authors that readers enjoy the book

Fischer, 2015-12-22 This two volume set provides a comprehensive overview of the multidisciplinary field of Embodied Cognition With contributions from internationally acknowledged researchers from a variety of fields *Foundations of Embodied Cognition* reveals how intelligent behaviour emerges from the interplay between brain body and environment Covering early research and emerging trends in embodied cognition Volume 1 *Perceptual and Emotional Embodiment* is divided into four distinct parts bringing together a number of influential perspectives and new ideas Part one opens the volume with an overview of theoretical perspectives and the neural basis of embodiment before part two considers body representation and its links with action Part three examines how actions constrain perception of the environment and part

four explores how emotions can be shaped and structured by the body and its activity Building on the idea that knowledge acquisition retention and retrieval are intimately interconnected with sensory and motor processes Foundations of Embodied Cognition is a landmark publication in the field It will be of great interest to researchers and advanced students from across the cognitive sciences including those specialising in psychology neuroscience intelligent systems and robotics philosophy linguistics and anthropology
