Cold, Bent L. Dahl, 2013-11-11 The science of neuroanaesthesia and neurointensive care is fascinating and the amounts of experimental and clinical studies are overwhelming Surely everyone can surf Medline and other database systems in order to get information If you however ask for head injury cerebral ischaemia or barbiturate you will get hun dreds may be thousands of titles and even the same number of abstracts The aims of this book are to review important experimental and clinical data with emphasis on up dated references The text within each issue and sub issue systematically covers experimental and clinical data separately and details con cerning cerebral blood flow cerebral metabolism intracranial pressure etc are reviewed accordingly In our survey of the literature we did not use Medline or other database sys tems systematically Rather we used available medical journals which covered the topics of anaesthesia neuroanaesthesia and neurointensive care In this way we hope that relevant literature is presented On the other hand we cannot exclude that some important issues are omitted The book covers 12 topics In three chapters methodology of CBF measure ments regulation of CBF and intracranial pressure are described In the next 6 chapters inhalation anaesthetics hypnotic agents analgesics muscular relaxants drugs used for control of blood pressure and the sitting position are reviewed. The last three chapters cover head injury subarachnoid haemorrhage and cere bral ischaemia Textbook of Neuroanaesthesia and Critical Care Basil F. Matta, David K. Menon, John M. Turner, 2000 All aspects of neuroanaesthesia are covered in this up to date highly illustrated textbook Written for general anaesthetic departments and ICUs as well as specialist neurosurgical and trauma units it covers the key areas needed to understand the principles of neuroanaesthesia such as functional anatomy advances in bedside monitoring and imaging techniques It addresses practical issues of diagnosis and patient care Best clinical practice is described in detail throughout It is an essential one stop review of modern neuroanaesthesia and neurocritical care for anaesthetists intensivists and surgeons at all levels of practice Controlled Hypotension in Neuroanaesthesia D. Heuser, 2012-12-06 This book is based on the proceedings of a conference held in Tubingen West Germany in 1981 at which anesthesiologists neuro surgeons pathologists and neurophysiologists met to consider the place of controlled hypotension in neurosurgery In the first part of the book alternative methods of inducing hypotension are considered and it is important to emphasize that the techniques which are suitable for neurosurgery may not be so for other types of surgery and vice versa In neurosurgery and par ticularly in aneurysm surgery the emphasis is on lowering intra luminal pressure and not mainly on reducing blood flow or limiting tissue oozing Another special consideration in neurosurgery is the influence of drugs used to induce hypotension on intracranial pressure with nitroprusside NTP and especially nitroglycerine increasing ICP in the closed skull and increasing brain bulk when the skull is open These and other points are extensively covered The use of a non essential technique like controlled hypotension demands that the procedure should carry minimal risk to the patient Contributions in part IV consider the neuropathology associated with too severe a lowering of oxygen supply through hypotension In the clinical avoidance of such ischemic changes in individual patients monitoring of the brain electrical function is much the most import ant and practical approach and is discussed in part III The Editors hope that the publication of these contributions to the Tubingen Symposium will help in the effective and safe appli cation of the technique of controlled hypotension in neurosurgery

Essentials of Evidence-Based Practice of Neuroanesthesia and Neurocritical Care Hemanshu

Prabhakar,2021-11-18 The current practice of medicine is largely moving toward applying an evidence based approach

Evidence based medicine is the integration of best research evidence using systematic reviews of the medical literature and
then translating it into practice by selecting treatment options for specific cases based on the best research Clinicians rely on
the availability of evidence and accordingly take decisions to provide best treatment to their patients Clinical management of
neurologically compromised patients is challenging and varied for this reason treating physicians including
neuroanesthesiologists are always in search of best available evidence for patient management and care Essentials of
Evidence Based Practice of Neuroanesthesia and Neurocritical Care highlights the various controversies that exist in the
practice of neuroanesthesia and provides conclusive evidence based solutions This comprehensive resource succinctly
discusses evidence based practice of neuroanesthesia based on systematic reviews in clinical neuroscience research Topics
include neurophysiology ICP or CPP thresholds neuropharmacology intravenous or inhalational anesthetics and

neuromonitoring ICP monitoring Evidence based practice is now an integral part of neuroscience and this book will help residents and trainees gain knowledge to apply it to their practice Endorsements Reviews Evidence based practice is facilitating changes at a rapid pace in neuroanesthesia and neurocritical care practice. Its practice is exceedingly crucial in neuroanesthesia and neurocritical care considering the criticality of the neurologically sick patients which leaves little or no room for error for an acceptable outcome in them Patient management in Neuroanesthesia and neurocritical care has many contentious issues because of rapidly evolving changes in their management which require treatment guided by the latest available evidence in literature Dr Hemanshu Prabhakar is a strong proponent of evidence based practice for the management of neurologically ill patients both for surgical procedures and their management in neurointensive care unit Undoubtedly this book will be of enormous benefits to the students as well as teachers of neuroanesthesia and neurocritical care sub specialties Parmod Bithal Editor In Chief Journal of Neuroanaesthesiology and Critical Care JNACC Highlights the various controversies that exist in the practice of neuroanesthesia and provides conclusive evidence based solutions Topics include neurophysiology ICP or CPP thresholds neuropharmacology intravenous or inhalational anesthetics and neuromonitoring ICP monitoring Provides residents and trainees with the knowledge to apply evidence based practice of neuroanesthesia to their practice Neuroanaesthesia Michael Nathanson, Mike Nathanson, Iain K.
