Atypical Cognitive Deficits in Developmental Disorders Sarah H. Broman, Jordan Grafman, 2014-02-25 This volume is based on a conference held to examine what is known about cognitive behaviors and brain structure and function in three syndromes and to evaluate the usefulness of such models The goal of this endeavor is to add to the knowledge base of cognitive neuroscience within a developmental framework Most of what is known about the neurological basis of cognitive function in humans has been learned from studies of central nervous system trauma or disease in adults Certain neurodevelopmental disorders affect the central nervous system in unique ways by producing specific as opposed to generalized cognitive deficit Studies of these disorders using neurobiological and behavioral techniques can yield new insights into the localization of cognitive function and the developmental course of atypical cognitive profiles The focus of this book is a discussion of the multidisciplinary research findings from studies of autism and Williams and Turner syndromes The approaches methods techniques and findings reported are at the cutting edge of neuroscience research on complex behavior patterns and their neural substrates Each disorder is accompanied by some degree of general cognitive impairment or mental retardation Of greater interest are the atypical deficits in which a cognitive function is spared such as language in Williams syndrome or is disproportionately depressed as are spatial discrimination skills and visual motor coordination in Turner syndrome Drastically reduced or seemingly absent language capabilities and little interaction with other people characterize the core autism syndrome A comprehensive and critical discussion of appropriate statistical techniques is made vivid by examples given from studies of small groups or single subjects in neurolinguistics and related fields

**Advanced Abnormal Child Psychology** Michel Hersen, Robert T. Ammerman, 2000-02-01 There was a time when abnormal child psychology was the stepchild of abnormal psychology with perhaps one or two chapters in an entire advanced textbook devoted to children Given the explosive amount of new research on child development in general since the 1980s stepchild is obviously no longer a valid characterization Indeed in the last 15 years many new journals devoted to childhood problems have made their appearance on library bookshelves The first edition of this book was assembled in an effort to integrate the empirical and

clinical literatures and show the advanced undergraduate and beginning graduate student the breadth and depth of our existing knowledge about the disorders that manifest themselves early in development. Now since its publication in 1995 a great deal more work has been done. This revised and expanded second edition includes much new material from the first edition authors and from several new ones all respected experts in the field. Part I offers an overview. It outlines historical developments with documentation of the neglect and abuse that children suffered at the hands of society well into the 20th century developmental psychopathology as a theoretical framework to guide research and clinical efforts psychophysiological determinants of behavior with special attention focused on childhood autism and attention deficit and antisocial conduct disorders theoretical methodological and practical considerations involved in determining investigatory paths including sampling design selection measurement data analysis and pragmatics and the reactions of children families and society to complex and diverse child health problems. Part II addresses assessment and treatment issues. It discusses behavioral treatment of childhood disorders and multiple case examples of commonly used techniques new developments in pharmacological treatment and sound guidelines for the consideration of pharmacotherapy and formulations and a review of preventive interventions. Part III examines specific disorders of childhood and adolescence. It discusses anxiety disorders affective and mood disorders mental retardation autism specific developmental disorders conduct disorder attention deficit hyperactivity disorder ADHD and eating disorders psychological aspects of pediatric disorders interventions tailored to the needs of the child and family to maximize adaptation and recovery and substance use disorders ranging from models emphasizing social influences to those focusing on biological vulnerabilities. Each chapter in Part III has an identical structure: clinical description causes course familial contributions psychological and genetic influences current treatments summary and includes numerous case illustrations.
