Neurohistochemistry Modern Methods And Applications:

Modern Methods in Analytical Morphology J. Gu, G.W. Hacker, 2012-12-06 While advances in modern medicine largely parallel our understanding of morphology discoveries in morphology are propelled by developments of new tools and means to visualize and measure tissue elements The invention of dissecting light fluorescence and electron microscopes together with advances in labeling and staining techniques are among the stepping stones of morphological progress Today we are in an exciting new era when classical morphology is being combined with developments from other disciplines The combination of morphology and immunology resulted in immunocytochemistry morphology and molecular biology led to in situ hybridization and in situ PCR Adding computer science to morphology gave birth to image analysis Combining laser technology and the microscope evolved into confocal microscope For more than a decade modern morphology has continued to develop by merging with other disciplines at a rate that is still gathering momentum providing exciting and dynamic new frontiers for other biological fields *Modern Methods in Analytical Morphology* based largely on the First International Workshop on Modern Methods in Analytical Histochemistry is an updated review of the current trends in the field It covers an extensive array of new technical developments in major disciplines of modern morphology The authors are not only leaders in their fields but also have extensive hands on experience with bench work Their chapters are written in a comprehensive manner including discussion of both theoretical considerations and practical applications to give the readers a broad view of the topics covered

Lymphoproliferative Diseases D.B. Jones, D.H. Wright, 2012-12-06 Recent developments in the field of cellular pathology and molecular biology have had a major impact on our ability to diagnose lymphoreticular disease and on our understanding of many of the disease processes which contribute to lymphoreticular pathology Twenty years ago the immunological analysis of lymphoid proliferations was in its infancy The techniques available such as sheep red blood cell rosetting and immune adherence to frozen sections now appear unbelievably crude when compared with our ability to accurately phenotype lymphocytes in suspension in frozen section and more recently in formalin fixed paraffin embedded tissue biopsies Four international work shops have also standardized the nomenclature for the wide range of lineage restricted and lineage related monoclonal antibodies available and have provided a basis for the sophisticated phenotypic analysis of lymphoid neoplasms in even the smallest routine laboratories Our concepts relating to the pathogenesis of a number of human lymphomas have also changed substantially and this has been aided by the development of systems for the classification of human lymphoma which are firmly based in our knowledge of the differentiation and biological behaviour of normal lymphoreticular cells In this monograph we present contributions from many authors examining both leukaemia and lymphoma from an immunological perspective It is our hope that some of these contributions will be of practical value in the laboratory investigation and diagnosis of lymphoreticular disease Other contributions record our conceptual understanding of the histogenesis and pathogenesis of human lymphoma Histopathologic Techniques, 2006 Antigen Retrieval Immunohistochemistry Based Research and Diagnostics Shan-Rong Shi, Clive R. Ailhaud, 2008-02-03 Adipose tissue is recognized to be exquisitely sensitive to hormone action and is also now recognized as a secretory and endocrine organ required for reproduction and good health Adipocytes are smart cells able within the tissue to communicate with surrounding cells but also with various organs particularly via leptin acting on the central nervous system Brown adipose tissue BAT and white adipose tissue WAT are known to be distinct tissues whereas the heterogeneity of WAT depots is well established Unfortunately excess WAT leads to obesity which is the most common health problem in industrialized countries Therefore from both a scientific and a technical point of view the time has come to create a survey of adipose tissues and their neglected adipocytes In Adipose Tissue Protocols I have attempted to gather together chapters from

all areas of adipose tissue research from in vivo to in vitro studies and to provide methods covering a wide variety of techniques including the choice of adipose tissue depot and of morphological techniques for the study of BAT and WAT the isolation subcellular fractionation and transfection of adipocytes where the low density of these cells must be taken into account assays of nutrient and ion fluxes and the metabolic aspects of nutrient uptake assays of lipid related enzymes biopsies and quantification of lipid related mRNAs cultures of adipose precursor cells from WAT and BAT of various species including human tissue measurements of adipose secretory products and assessment of WAT metabolism in vivo
