Textbook of Clinical Pediatrics A. Y. Elzouki, H. A. Harfi, H. Nazer, William Oh, F. B. Stapleton, R. J. Whitley, 2012-01-10. The second edition of the textbook is planned to become a MRW textbook. It will be written by 389 eminent pediatricians and scientists from leading university hospitals and health centers in North America, Europe, Asia, and Australia. Written with more than 425 chapters, the book will encompass virtually all pediatric subspecialties, covering every pediatric disease and organ system. Its strong clinical focus with a problem-based approach will help practicing pediatricians, residents, medical students, as well as family practitioners to manage sick children in a practical way based on scientific evidence. Thus, it will become a valuable reference and resource for all health care practitioners dealing with pediatric patients.

Pediatric Neurology, Part I Olivier Dulac, Maryse Lassonde, Harvey B. Sarnat, 2013-04-24. The child is neither an adult miniature nor an immature human being; at each age, it expresses specific abilities that optimize adaptation to its environment and development of new acquisitions. Diseases in children cover all specialties encountered in adulthood, and neurology involves a particularly large area ranging from the brain to the striated muscle, the generation and functioning of which require half the genes of the whole genome and a majority of mitochondrial ones. Human nervous system is sensitive to prenatal aggression, is particularly immature at birth, and development may be affected by a whole range of age-dependent disorders distinct from those that occur in adults. Even diseases more often encountered in adulthood than childhood may have specific expression in the developing nervous system. The course of chronic neurological diseases beginning before adolescence remains distinct from that of adult pathology, not only from the cognitive but also from the motor perspective, right into adulthood, and a whole area is developing for adult neurologists to care for these children with persisting neurological diseases when they become adults. Just as pediatric neurology evolved as an identified specialty as the volume and complexity of data became too much for the general pediatrician or the adult neurologist to master, the discipline has now continued to evolve into so many subspecialties such as epilepsy, neuromuscular disease, stroke, malformations, neonatal neurology, metabolic diseases, etc., that the general pediatric neurologist no longer can reasonably possess in-depth expertise in all areas, particularly in dealing with complex cases. Subspecialty expertise thus is

provided to some trainees through fellowship programmes following a general pediatric neurology residency and many of these fellowships include training in research. Since the infectious context, the genetic background and medical practice vary throughout the world, this diversity needs to be represented in a pediatric neurology textbook. Taken together and although brain malformations (H Sarnat, P Curatolo 2007) and oncology (W Grisold, R Soffietti) are covered in detail in other volumes of the same series and therefore only briefly addressed here, these considerations justify the number of volumes and the number of authors who contributed from all over the world. Experts in the different subspecialties also contributed to design the general framework and contents of the book. Special emphasis is given to the developmental aspect and normal development is reminded whenever needed, brain muscle and the immune system. The course of chronic diseases into adulthood and ethical issues specific to the developing nervous system are also addressed. A volume in the Handbook of Clinical Neurology series which has an unparalleled reputation as the world's most comprehensive source of information in neurology. International list of contributors including the leading workers in the field. Describes the advances which have occurred in clinical neurology and the neurosciences, their impact on the understanding of neurological disorders and on patient care.
