Jeffrey, 2012-12-06 X ray and neutron crystallography have played an increasingly important role in the chemical and biochemical sciences over the past fifty years The principal obstacles in this methodology the phase problem and computing have been overcome The former by the methods developed in the 1960 s and just recognised by the 1985 Chemistry Nobel Prize award to Karle and Hauptman the latter by the dramatic advances that have taken place in computer technology in the past twenty years Within the last decade two new radiation sources have been added to the crystallographer's tools One is synchrotron X rays and the other is spallation neutrons Both have much more powerful fluxes than the previous sources and they are pulsed rather than continuous New techniques are necessary to fully exploit the intense continuous radiation spectrum and its pulsed property Both radiations are only available from particular National Laboratories on a guest user basis for scientists outside these National Laboratories Hitherto the major emphasis on the use of these facilities has been in solid state physics and the material engineering and biological sciences We believe that there is equivalent potential to applications which are primarily chemical or biochemical **Chemical Abstracts Service Source Index** American Chemical Society. Chemical Abstracts Service, 1990 The CAS Source Index CASSI Search Tool is an online resource intended to support researchers and librarians who need accurate bibliographic information This free resource can be used to quickly and easily look up or confirm publication titles and abbreviations as well as CODEN ISBN or ISSN codes The CASSI database contains a listing of publications indexed by Chemical Abstracts Service CAS since 1907 Fifty Years of Neutron Diffraction, The Advent of Neutron Scattering George Edward Bacon, 1987 This book aims to trace the history of neutron scattering from its pioneer days to give an outline of the achievements in its main fields of application notably magnetism chemistry lattice dynamics and

biology and some account of its present status Articles are contributed by pioneers who have worked in the subject for more than 40 years With stories and reminiscences of the early days in fifteen different countries the book captures something of the flavour and opportunities of neutron scattering and shows the changes in the way of life of neutron experimenters over the past fifty years **Molecular Spectroscopy Volume 6** ,1979 This product is not available separately it is only sold as part of a set There are 750 products in the set and these are all sold as one entity Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research Written by experts in their specialist fields the series creates a unique service for the active research chemist supplying regular critical in depth accounts of progress in particular areas of chemistry For over 80 years the Royal Society of Chemistry and its predecessor the Chemical Society have been publishing reports charting developments in chemistry which originally took the form of Annual Reports However by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born The Annual Reports themselves still existed but were divided into two and subsequently three volumes covering Inorganic Organic and Physical Chemistry For more general coverage of the highlights in chemistry they remain a must Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry Some titles have remained unchanged while others have altered their emphasis along with their titles some have been combined under a new name whereas others have had to be discontinued The current list of Specialist Periodical Reports can be seen on the inside flap of this volume *NBS Special Publication* ,1980 ERDA Energy Research Abstracts ,1977 ERDA Energy Research Abstracts United States.
