Glaciogenic Reservoirs and

Hydrocarbon Systems Mads Huuse, J. Redfern, D. P. Le Heron, R. J. Dixon (Geologist), A. Moscariello, Jonathan Craig, 2012 Glaciogenic reservoirs and hydrocarbon systems occur intermittently throughout the stratigraphic record with particular prominence in Neoproterozoic Late Ordovician Permo Carboniferous and Late Cenozoic strata Recent interest in glaciogenic successions has been fuelled by hydrocarbon discoveries in ancient glaciogenic reservoirs in North Africa the Middle East Australia and South America Glaciogenic deposits of Pleistocene age are noteworthy for their content of groundwater onshore and potentially prospective and or hazardous gas accumulations offshore The abundant imprints of Pleistocene glaciations in both hemispheres can be used to reconstruct complex histories of repeated ice cover and retreat and glacier bed interactions thus informing our view on the dynamics of older ice caps and predictions of future glaciations This volume aims to provide a better understanding of glaciogenic processes their stratigraphic record and reservoir characteristics of glaciogenic deposits The book comprises 3 overview papers and 16 original case studies of Neoproterozoic to Pleistocene successions on 6 continents and will be of interest to sedimentologists glaciologists geophysicists hydrologists and petroleum geologists alike P 4 of cover

Quaternary Sea-Level Changes Colin V. Murray-Wallace, Colin D. Woodroffe, 2014-01-30

There have been significant changes in sea level over the past two million years and a complete understanding of natural cycles of change as well as anthropogenic effects is imperative for future global development This book reviews the history of research into these sea level changes and summarises the methods and analytical approaches used to interpret evidence for

sea level changes It provides an overview of changing climates during the Quaternary examines processes responsible for global variability of sea level records and presents detailed reviews of sea level changes for the Pleistocene and Holocene The book concludes by discussing current trends in sea levels and likely future sea level changes This is an important and authoritative resource for academic researchers and graduate and advanced undergraduate students working in tectonics stratigraphy geomorphology physical geography environmental science and other aspects of Quaternary studies *The Late Cenozoic of Patagonia and Tierra del Fuego* J. Quaternary of the Trent David R. Bridgland, Andy Howard, Mark J. White, Tom S. White, 2014-03-31 This volume is an integrated overview and synthesis of available data relating to the Quaternary evolution of the River Trent It provides detailed descriptions of the Pleistocene sedimentary records from the Trent its tributaries and related drainage systems a sedimentary record that spans a period of approximately half a million years and the biostratigraphical and archaeological material preserved therein Significant new data are presented from recently discovered sites of geological and archaeological importance including previously unrecognised fluvial deposits as well as novel analyses such as mathematical modelling of fluvial incision as recorded by the river terrace deposits In combination with a thorough review of the literature on the Trent these new data have contributed to revised chronostratigraphical and palaeogeographical frameworks for central England and revealed the complexity of the Pleistocene fluvial and glacial records in this region The fragmentary Trent terrace sequence is an important element of wider reconstructions of Pleistocene palaeodrainage in Britain providing a link between the records preserved in the English Midlands and those in East Anglia

Prehistoric Ukraine Malcolm C. Lillie, Inna D. Potekhina, 2020-09-30 This volume covers the Prehistory of Ukraine from the Lower Palaeolithic through to the end of the Neolithic periods This is the first comprehensive synthesis of Ukrainian Prehistory from earliest times through until the Neolithic Period undertaken by researchers who are currently investigating the Prehistory of Ukraine At present there are no other English language books on this subject that provide a current synthesis for these periods The chapters in this volume provide up to date overviews of all aspects of prehistoric culture development in Ukraine and present details of the key sites and finds for the periods studied The book includes the most recent research from all areas of prehistory up to the Neolithic period and in addition areas such as recent radiocarbon dating and its implications for culture chronology are

considered as is a consideration of aDNA and the new insights into culture history this area of research affords alongside recent macrofossil studies of plant use and anthropological and stable isotope studies of diet which all combine to allow greater insights into the nature of human subsistence and cultural developments across the Palaeolithic to Neolithic periods in Ukraine It is anticipated that this book will be an invaluable resource for students of prehistory throughout Europe in providing an English language text that is written by researchers who are active in their respective fields and who possess an intimate knowledge of Ukrainian prehistory

Examining Evolutionary Trends in Equus and its Close Relatives from Five Continents Raymond Louis Bernor, Gina Marie Semprebon, Florent Rivals, Leonardo Santos Avilla, Eric Scott, 2020-03-12
Evolution of the horse has been an often cited primary example of evolution as well as one of the classic and important stories in paleontology for over a century and a half due to their rich fossil record across 5 continents North America South America Europe Asia and Africa The recent horse has served a profound role in human ancestry including agriculture commerce sport transport warfare and in prehistory for the subsistence of humans Many studies have examined the evolution of the Equidae and chronicled the striking changes in skulls dentition limbs and body size which have long been perceived to be a response to environmental shifts through time Most comprehensive studies heretofore have 1 focused on the Great Transformation changes that occurred in the early Miocene 2 involved tracking long term diversity or paleoecological trends on a single continent or within a geographical locality or 3 concentrated on the 3 toed hipparions The Plio Pleistocene evolutionary stage of horse evolution is punctuated by the great climatic fluctuations of the Quaternary beginning 2.6 Ma which influenced Equus evolution biogeographic dispersion and adaptation on a nearly global scale The evolutionary biology of Equus evolution across its entire range remains relatively poorly understood and often highly controversial Some of this lack of understanding is due to assumptions that have arisen because of the relatively derived craniodental and postcranial anatomy of Equus and its close relatives which has seemed to imply that that these forms occupied relatively homogenous and narrow dietary and locomotor niches notions that have not been adequately addressed and rigorously tested Other challenges have revolved around teasing apart environmentally driven adaptation versus phylogenetically defined morphological change Geochronologic age control of localities geographic provinces and continents has improved but in no way is absolute and can be reexamined in our proposed volume Temporal resolution for paleodietary paleohabitat and paleoecological interpretations are also challenging for understanding the evolution of Equus Our proposed volume attempts to assemble a group of experts who will address multiple dimensions of Equus evolution in time and space

Iceland - Modern Processes and Past Environments C. Caseldine, A. Russell, J. Hardardóttir, O. Knudsen, 2005-04-28
Iceland provides an unique stage on which to study the natural environment both past and present and it is understanding both aspects of reconstructing the past and observing and interpreting the present that form the focus of the contributions to this volume The papers are all written by active researchers and incorporate both reviews and new data Although

concentrating largely on the recent Quaternary timescale a wide range of topics is explored including subglacial volcanism onshore and offshore evidence for the Last Glacial Maximum and subsequent deglaciation current glacial characteristics including j kulhlaups and glacial landsystems soil development Holocene ecosystem change current oceanography impacts of volcanic sulphur loading chemical weathering and the CO2 budget and documentary evidence for historical climate The key element of the volume is that for the first time it provides a wide overview of a range of topics for which Iceland provides an almost unparalleled laboratory emphasizing the importance of research on this small island for studies over a much broader global scale These reviews point the way to future research directions and are supplemented by extensive illustrations and a comprehensive bibliography Wide range of related topics covered both from a present day and quaternary perspective Reviews from scientists active in each research area across a range of subjects providing both overviews and new data supplemented by an extensive bibliography Extensive illustrations and examples from the field

Juneau Icefield Research Project (1949-1958) Cal Heusser, 2007-04-17 The Juneau Icefield Research Project JIRP was formed to find a prototype area to study Alaska s coastal glaciers and trends in climatic change For the past 57 years JIRP has conducted a systematic study of key receding and advancing glaciers including Lemon Creek and Taku Glaciers From this study a model has been developed to study the mass balance of these glaciers and their relation to general atmospheric circulation Taku s mass balance was expected to provide a meaningful assessment of flakier climate relations and environmental trends specifically the increase in atmospheric trace element pollution and global warming Juneau Icefield Research Project 1949 1958 is represented by 15 chapters organized in four parts Background of the Project Early Years of the Project 1949 1952 Later Years of the Project 1953 1958 and Summation and Epilogue After describing the Project s background Chapters 3 through 12 cover year by year activities personnel logistics and research of the Taku and Lemon Creek Glaciers These chapters included day to day journal entries that represent a record of the informal itineraries covering the course of the study Chapters 13 and 14 summarize glaciological findings on Taku Glacier and the status of hydrological budgets on Lemon Creek Glacier through the International Geophysical year 1957 19658 The final chapter of the text is an overview of paleoecological work by the Project in North Pacific America brought into the context of modern research with the recognition of glacier climate cycles Documents the study Juneau Icefield Research Project on a year by year account covering activities personnel logistics and research Discusses the model developed from the JIRP and explains its importance in predicting future climate changes Presents the information with day to day journal entries making the text attractive and easy to read

The Climate of Past Interglacials F. Sirocko, M. Claussen, T. Litt, M.F. Sanchez-Goni, 2006-12-08 Historically climate fluctuations such as the Little Ice Age show that interglacial climate chage in not entirely stable but responds to even subtle changes in radiative forcing Through research it has been made clear that even an abrupt change of climate within years is not just a theoretical possibility but has in fact happened in the prehistoric past It is therefore clear that in principal it could happen

again Human civilizaization has exploded under the mild and relatively stable climatic conditions that have prevailed over the last 11 000 years This book focuses on revisiting the past and to study climate and environment in a suite of experiments where boundary conditions are similar but not identical to today so we can learn about the climate environment system its sensitivity thresholds and feedback The palaeoclimate community holds an important key to scientific information on climate change that provides a basis for appropriate adaptation and mitigation strategies The authors of this book have taken up this challenge and summarize their results in this special volume It presents state of the art science on new reconstructions from all spheres of the Earth System and on their synthesis on methodological advances and on the current ability of numerical models to simulate low and high frequency changes of climate environment and chemical cycling related to interglacials Summarizes important information on climate change providing a basis for appropriate adaptation and mitigation strategies for human civilization Reports on new reconstuctions on methodological advances numerical models simulating low and high frequence changes and chemical cycling related to interglacials Incorporates palaeovegetaion and numerical modeling of climate and environmental and geochemical parameters to address regional feedback to global change with successful data models
