Taranath, 2009-12-14 An exploration of the world of concrete as it applies to the construction of buildings Reinforced Concrete Design of Tall Buildings provides a practical perspective on all aspects of reinforced concrete used in the design of structures with particular focus on tall and ultra tall buildings Written by Dr Bungale S Taranath this work explains t **Fly Ash in Concrete** K. Wesche, 2004-03-01 This book is a state of the art report which documents current knowledge on the properties of fly ash in concrete and the use of fly ash in construction It includes RILEM Recommendations on fly ash in concrete and a comprehensive bibliography including over 800 references **Guidelines for Design of Low-Rise Buildings Subjected to Lateral Forces** Ajaya Kumar Gupta, Peter James Moss, 2020-11-25 Guidelines for Design of Low Rise Buildings Subjected to Lateral Forces is a concise guide that identifies performance issues concerns and research needs associated with low rise buildings The book begins with an introduction that discusses special problems with low rise buildings subjected to wind and earthquakes Chapter 2 examines probabilistic methods and their use in evaluating risks from natural hazards It also addresses the characteristics of wind and seismic forces and levels of risk implied by building codes Wind forces are covered in more detail in Chapter 3 with discussions of wind force concepts and wind structure interactions Chapter 4 is devoted to earthquake forces and traces the development of building codes for earthquake resistant design Chapter 5 describes the main framing systems used to resist lateral forces and discusses the code requirements for drift control The designs and requirements for connections between building elements are addressed in Chapter 6 It includes examples along with several illustrations of suitable connections The performance of non structural elements during wind and earthquake forces is also examined in detail This book serves as an important reference for civil

engineers construction engineers architects and anyone concerned with structural codes and standards It is an excellent guide that can be used to supplement design recommendations and provide a design basis where there are no current requirements **Appendix on Ice Load considerations** FIB - International Federation for Structural Concrete,1988-09-01

Frost Resistance of Concrete R Auberg,M.J. Setzer,2004-03-01 This book forms the proceedings of the international workshop to be held in Essen Germany This workshop summarises the conclusion of the technical committee s investigations into the resistance of concrete to freeze thaw attack specific in this to resistance with or without de icing chemicals It presents the RILEM recommendations on testing the freeze thaw and de icing salt resistance of concrete **Seismic Assessment and Retrofit of Reinforced Concrete Buildings** fib Fédération internationale du béton,2003-08-01 In most parts of the developed world the building stock and the civil infrastructure are ageing and in constant need of maintenance repair and upgrading Moreover in the light of our current knowledge and of modern codes the majority of buildings stock and other types of structures in many parts of the world are substandard and deficient This is especially so in earthquake prone regions as even there seismic design of structures is relatively recent In those regions the major part of the seismic threat to human life and property comes from old buildings Due to the infrastructure s increasing decay frequently combined with the need for structural upgrading to meet more stringent design requirements especially against seismic loads structural retrofitting is becoming more and more important and receives today considerable emphasis throughout the world In response to this need a major part of the fib Model Code 2005 currently under development is being devoted to structural conservation and maintenance More importantly in recognition of the importance of the seismic threat arising from existing substandard buildings the first standards for structural upgrading to be promoted by the international engineering community and by regulatory authorities alike are for seismic rehabilitation of buildings This is the case for example of Part 3 Strengthening and Repair of Buildings of Eurocode 8 i e of the draft European Standard for earthquake resistant design and which is the only one among the current 2003 set of 58 Eurocodes attempting to address the problem of structural upgrading It is also the case of the recent 2001 ASCE draft standard on Seismic evaluation of existing buildings and of the 1996 Law for promotion of seismic strengthening of existing reinforced concrete structures in Japan As noted in Chapter 1 of this Bulletin fib as CEB and FIP did before has placed considerable emphasis on assessment and rehabilitation of existing structures The present Bulletin is a culmination of this effort in the special but very important field of seismic assessment and rehabilitation It has been elaborated over a period of 4 years by Task Group 7 1 Assessment and retrofit of existing structures of fib Commission 7 Seismic design a truly international team of experts representing the expertise and experience of all the important seismic regions of the world In the course of its work the team had six plenary two day meetings in January 1999 in Pavia Italy in August 1999 in Raleigh North Carolina in February 2000 in Queenstown New Zealand in July 2000 in Patras Greece in March 2001 in Lausanne Switzerland and in August 2001 in Seattle Washington In October 2002 the final draft of

the Bulletin was presented to public during the 1st fib Congress in Osaka It was also there that it was approved by fib Commission 7 Seismic Design The contents is structured into main chapters as follows 1 Introduction 2 Performance objectives and system considerations 3 Review of seismic assessment procedures 4 Strength and deformation capacity of non seismically detailed components 5 Seismic retrofitting techniques 6 Probabilistic concepts and methods 7 Case studies

Durability of Concrete and Cement Composites Chris L. Page, M M Page, 2007-06-30 Whilst most structures made using concrete and cement based composites have not shown signs of premature degradation there have been notable exceptions In addition there is increasing pressure for new structures to remain in serviceable condition for long periods with only minimal maintenance before being recycled All these factors have highlighted the issues of what affects the durability of these materials in different circumstances and how material properties can be measured and improved *Durability of concrete and cement composites* summarises key research on these important topics After an introductory chapter the book reviews the pore structure and chemistry of cement based materials providing the foundation for understanding the particular aspects of degradation which are discussed in the following chapters These include dimensional stability and cracking processes chemical and microbiological degradation of concrete corrosion of reinforcing and prestressing steels deterioration associated with certain aggregates effects of frost and problems involving fibre reinforced and polymer cement composites With its distinguished international team of contributors *Durability of concrete and cement composites* is a standard reference for all those concerned with improving the service life of structures using these materials Analyses a range of materials such as reinforced steel in concrete pre stressed concrete and cement composites Discusses key degradation phenomena such as cracking processes and the impact of cold weather conditions A standard reference for those concerned with improving the service life of structures using concrete and cement based composites **High strength concrete joint**

Proceedings of the Fourth International Conference on Durability of Building Materials and Components Gyoujin Cho, 2013-10-02

Proceedings of the Fourth International Conference on Durability of Building Materials and Components Volume I contains the proceedings of the Fourth International Conference on Durability of Building Materials and Components held in Singapore on November 4-6, 1987. The conference provided a forum for reviewing advances that have been made with regards to the durability of building materials and components and tackled topics ranging from concrete materials and structures to fiber reinforced concrete, plastics, surface coatings and building codes and specifications. Comprised of 67 chapters, this volume first summarizes the technical barriers to service life prediction and outlines research directions for overcoming such barriers. The discussion then turns to the deterioration of slate tiles containing iron sulfides, prediction of durability of building sealants and the durability of building ceramics in agricultural environments. Subsequent chapters focus on the influence of seawater curing on the pore structure of flyash blended cement mortar, effect of cement composition on the durability of natural fibers in mortar, permeability control of concrete protective layers in products and theory and experimental evidence concerning maximum and minimum strength of composite materials. The applications of surface integral techniques to fracture analysis are also considered. This book will be of interest to practitioners and research workers in engineering.
