Set Theory For Computing From Decision Procedures To Logic Programming With Sets:

Set Theory for Computing Domenico Cantone, Eugenio Omodeo, Alberto Policriti, 2013-06-29 Set Theory for Computing offers an up to date and comprehensive account of set oriented symbolic manipulation and automated reasoning methods Mastering today's variety of systems with crisp formal tools is a prerequisite for a high degree of control over sets and aggregates The many algorithmic methods and deductive techniques in this book offer readers a clear view of the use of set theoretic notions in such critical areas as specification of problems data types and solution methods algorithmic program verification and automated deduction The rigorous and largely self contained style of presentation addresses readers wanting to complement their set intuition with the ability to exploit it in specification and verification and master it by symbolic logically based techniques and methods This book will be of interest to graduates and researchers in theoretical computer science and computational logic and automated reasoning *A 25-Year Perspective on Logic Programming* Agostino Dovier, Enrico Pontelli, 2010-06-30 This book celebrates the 25th anniversary of GULP the Italian Association for Logic Programming Authored by Italian researchers at the leading edge of their fields it presents an up to date survey of a broad collection of topics in logic programming making it a useful reference for both researchers and students During its 25 year existence GULP has organised a wide range of national and international activities including both conferences and summer schools It has been especially active in supporting and encouraging young researchers by providing scholarships for GULP events and awarding distinguished dissertations We in the international logic programming community look upon GULP with a combination of envy admiration and gratitude We are pleased to attend its conferences and summer schools where we can learn about scientific advances catch up with old friends and meet young students It is an honour for me to acknowledge our appreciation to GULP for its outstanding contributions to our field and to express our best wishes for its continuing prosperity in the future March 2010 Robert Kowalski Imperial College London Preface On June 18 1985 a group of pioneering researchers including representatives from industry national research labs and academia attended the constituent assembly of the Group of researchers and Users of Logic Programming GULP association That was the starting point of a long adventure in science that 1 we are still experiencing 25 years later This volume celebrates this important event **Ewa Orłowska on Relational Methods in Logic and Computer Science** Joanna Golińska-Pilarek, Michał Zawidzki, 2018-12-08 This book is a tribute to Professor Ewa Orłowska a Polish logician who was celebrating the 60th year of her scientific career in 2017 It offers a collection of contributed papers by different authors and covers the most important areas of her research Prof Orłowska made significant contributions to many fields of logic such as proof theory algebraic methods in logic and knowledge representation and her work has been published in 3 monographs and over 100 articles in internationally acclaimed journals and conference proceedings The book also includes Prof Orłowska's autobiography bibliography and a dialogue between her and the editors of the volume as well as contributors' biographical notes and is suitable for scholars

and students of logic who are interested in understanding more about Prof Orowska's work

On Sets and Graphs Eugenio G. Omodeo, Alberto Policriti, Alexandru I. Tomescu, 2017-05-11 This treatise presents an integrated perspective on the interplay of set theory and graph theory providing an extensive selection of examples that highlight how methods from one theory can be used to better solve problems originated in the other Features explores the interrelationships between sets and graphs and their applications to finite combinatorics introduces the fundamental graph theoretical notions from the standpoint of both set theory and dyadic logic and presents a discussion on set universes explains how sets can conveniently model graphs discussing set graphs and set theoretic representations of claw free graphs investigates when it is convenient to represent sets by graphs covering counting and encoding problems the random generation of sets and the analysis of infinite sets presents excerpts of formal proofs concerning graphs whose correctness was verified by means of an automated proof assistant contains numerous exercises examples definitions problems and insight panels
