World Cup VIII Daniele Nardi, Martin Riedmiller, Claude Sammut, José Santos-Victor, 2005-03-23

These are the proceedings of the RoboCup 2004 Symposium held at the Instituto Superior Técnico in Lisbon Portugal in conjunction with the RoboCup competition. The papers presented here document the many innovations in robotics that result from RoboCup. A problem in any branch of science or engineering is how to devise tests that can provide objective comparisons between alternative methods. In recent years competitive engineering challenges have been established to motivate researchers to tackle difficult problems while providing a framework for the comparison of results. RoboCup was one of the first such competitions and has been a model for the organization of challenges following sound scientific principles. In addition to the competition the associated symposium provides a forum for researchers to present refereed papers. But for RoboCup the symposium has the greater goal of encouraging the exchange of ideas between teams so that the competition as a whole progresses from year to year and strengthens its contribution to robotics. One hundred and eighteen papers were submitted to the Symposium. Each paper was reviewed by at least two international referees. 30 papers were accepted for presentation at the Symposium as full papers and a further 38 were accepted for poster presentation. The quality of the Symposium could not be maintained without the support of the authors and the generous assistance of the referees.

Phenomenal Intentionality Uriah Kriegel, 2013-01-09. Since the late 1970s the main research program for understanding intentionality, the mind's ability to direct itself onto the world, has been based on the attempt to naturalize intentionality in the sense of making it intelligible how intentionality can occur in a perfectly natural, indeed entirely physical world. Some philosophers, however, have remained skeptical of this entire approach. In particular, some have argued that phenomenal consciousness, the subjective feel of conscious experience, has an essential role to play in the theory of intentionality, a role missing in the naturalization program. Thus a number of authors have recently brought to the fore the notion of phenomenal intentionality as well as a cluster of nearby notions. There is a vague sense that their work is interrelated, complementary, and mutually reinforcing in a way that suggests a germinal research program. With twelve new essays by philosophers at the forefront of the field, this volume is designed to launch this research program in a more self-conscious way by exploring some of the fundamental claims and themes of relevance to this program.
