Marine Biotechnology In The Twenty First Century Problems Promise And Products:

Marine Biotechnology in the Twenty-First Century National Research Council, Division on Earth and Life Studies, Board on Life Sciences, Ocean Studies Board, Committee on Marine Biotechnology: Biomedical Applications of Marine Natural Products, 2002-06-29 Dramatic developments in understanding the fundamental underpinnings of life have provided exciting opportunities to make marine bioproducts an important part of the U S economy Several marine based pharmaceuticals are under active commercial development ecosystem health is high on the public s list of concerns and aquaculture is providing an ever greater proportion of the seafood on our tables Nevertheless marine biotechnology has not yet caught the public s or investor s attention Two workshops held in October 1999 and November 2001 at the National Academies were successful in highlighting new developments and opportunities in environmental and biomedical applications of marine biotechnology and also in identifying factors that are impeding commercial exploitation of these products This report includes a synthesis of the 2001 sessions addressing drug discovery and development applications of genomics and proteomics to marine biotechnology biomaterials and bioengineering and public policy and essays contributed by the workshop speakers *Grand Challenges in Marine Biotechnology* Pabulo H. Rampelotto, Antonio Trincone, 2018-05-15 This book serves as essential reading for research scientists and biotechnologists from both academia and industry working in marine biotechnology and related disciplines The book discusses recent advances and challenges in terms of science technology innovation and policy for the development of the field and how marine biotechnology may provide new solutions to some of the grand challenges faced by our society Written in an accessible language the book is also recommended as a reference text for decision makers in government and non governmental organizations in their efforts to foster the development of a global blue economy With less than 5 % of the vast and rich marine environment explored our seas and oceans represent a virtually unexplored resource for the discovery of novel product processes and development of bio inspired synthetic drugs with biotechnological potential As such the marine environment has been considered Earth s last frontier of exploration Recent advances in molecular techniques are providing the necessary tools to access on a larger scale the still untapped ocean resources and consequently unveil the promise of the blue biotechnology Governments are recognizing the potential of marine biotechnology to provide solutions to some of the Grand Challenges of the 21st Century such as sustainable energy and food sources identification of novel drugs for improved health treatments and providing new industrial materials and processes For this reason advances in marine biotechnology may foster the much needed source of innovation and economic growth in many countries and pave the way towards the development of a global blue economy i e a new economic model based on the sustainable exploration of our ocean ecosystems Marine Enzymes for Biocatalysis Antonio Trincone, 2013-09-30 Marine bioprospecting is a highly topical subject in both applied and basic research but as yet the marine ecosystem is a relatively unexplored source of natural bioactive substances with potential therapeutic activity

This book addresses the use of marine enzymes in biocatalysis through a series of chapters from leading scientists within academic and industrial fields. Biocatalytic processes can take advantage of the habitat related properties of marine enzymes such as salt tolerance, hyperthermostability, barophilicity, cold adaptivity and so on whilst also taking into consideration substrate specificity and affinity. These evolved properties are linked to the metabolic functions of the enzymes and to the ecological aspects of the natural source. New properties can also be discovered at the molecular level of catalysis particularly concerning the stereochemical characteristics of products. Marine enzymes for biocatalysis initially examines the nature and level of interest in marine biological diversity and outlines the fundamentals of biocatalysis. It goes on to detail sources of marine enzymes and to analyse examples from both chemical and stereochemical viewpoints of catalysis including microbial enzymes and animal or plant sources. The book goes on to explore the future potential of marine bioprospecting in biocatalysis. Compiles studies from leading scientists in a direct and accessible format. Includes practical descriptions of results adding further details not often covered in formal articles. Takes a molecular view which fully explains the enzymatic aspects of reactions particularly regarding biocatalytic characteristics and descriptions of bioprocesses. Selects examples of chemical and stereochemical aspects of enzymatic action with respect to known terrestrial counterparts.

Marine Biotechnology II Yves Le Gal, Roland Ulber, 2005-09-29 The series *Advances in Biochemical Engineering Biotechnology* presents critical reviews of the present and future trends in polymer and biopolymer science including chemistry, physical chemistry, physics and material science. It is addressed to all scientists at universities and in industry who wish to keep abreast of advances in the topics covered. Title page verso

Marine Natural Resources and Technological Development Marco Colazingari, 2013-01-11 This book offers a comprehensive and systematic examination of the issues involved within Ocean Economics. The oceans are the last frontier on Earth and research and exploration are key to developing and enhancing global economic activity that is necessary to sustain a growing human population. Colazingari pinpoints the contentious issues relevant to oceans natural resources management and protection. He examines the cutting edge technology used for the exploration of the oceans living and non living resources, fisheries, bio products, energy resources, mineral deposits and identifies the significant emerging patterns that will determine the development of ocean economics in the future. Problems require timely action by politicians and policymakers at an international level while scientists and researchers must assist in providing reliable information and investigating viable options. With writing that is straightforward but comprehensive, this book will appeal to professionals, academics, students as well as anyone interested in marine environment.

Atlantic Salmon in Maine National Research Council,Division on Earth and Life Studies,Ocean Studies Board,Board on Environmental Studies and Toxicology,Committee on Atlantic Salmon in Maine,2004-10-07 Because of the pervasive and substantial decline of Atlantic salmon populations in Maine over the past 150 years and because they are close to extinction a comprehensive statewide action should be taken now to ensure their survival The populations of Atlantic salmon have declined drastically from an estimated half million adult salmon returning to U S rivers each year in the early 1800s to perhaps as few as 1 000 in 2001 The report recommends implementing a formalized decision making approach to establish priorities evaluate options and

coordinate plans for conserving and restoring the salmon
