Learning Methods with Noisy, Incomplete or Small Datasets Jordi Solé-Casals,Zhe Sun,Cesar F. Caiafa,Toshihisa Tanaka,2021-08-17 Over the past years businesses have had to tackle the issues caused by numerous forces from political technological and societal environment The changes in the global market and increasing uncertainty require us to focus on disruptive innovations and to investigate this phenomenon from different perspectives The benefits of innovations are related to lower costs improved efficiency reduced risk and better response to the customers needs due to new products services or processes On the other hand new business models expose various risks such as cyber risks operational risks regulatory risks

and others Therefore we believe that the entrepreneurial behavior and global mindset of decision makers significantly contribute to the development of innovations which benefit by closing the prevailing gap between developed and developing countries Thus this Special Issue contributes to closing the research gap in the literature by providing a platform for a scientific debate on innovation internationalization and entrepreneurship which would facilitate improving the resilience of businesses to future disruptions Order Your Print Copy *Complex-Valued Neural Networks* Akira Hirose,2003 In recent years complex valued neural networks have widened the scope of application in optoelectronics imaging remote sensing quantum neural devices and systems spatiotemporal analysis of physiological neural systems and artificial neural information processing In this first ever book on complex valued neural networks the most active scientists at the forefront of the field describe theories and applications from various points of view to provide academic and industrial researchers with a comprehensive understanding of the fundamentals features and prospects of the powerful complex valued networks

Evolvable Systems: From Biology to Hardware Kiyoshi Tanaka, Masaya Iwata, Tetsuya Higuchi, Moritoshi Yasunaga, 2003-06-30 On behalf of the ICES 2001 Conference Committee it is our pleasure to present to you the proceedings of the fourth International Conference on Evolvable Systems From Biology to Hardware ICES 2001 held in Tokyo Japan on 3-5 October 2001 addressing the latest developments and discussing challenges facing the field of evolvable systems. The idea of evolving machines whose origins can be traced back to the cybernetics movement of the 1940s and the 1950s has recently re-emerged in the form of the nascent field of bio-inspired systems and evolvable hardware. Following the workshop Towards Evolvable Hardware which took place in Lausanne Switzerland in October 1995 the First International Conference on Evolvable Systems From Biology to Hardware ICES96 was held at the Electrotechnical Laboratory MITI Tsukuba Japan in October 1996. The second and the third International Conferences on Evolvable Systems From Biology to Hardware ICES98 and ICES 2000 were respectively held in Lausanne in September 1998 and in Edinburgh in April 2000. Following the success of these past events ICES 2001 was dedicated to the promotion and advancement of all aspects of evolvable systems including hardware software algorithms and applications. By bringing together researchers who use biologically inspired concepts to implement real systems in artificial intelligence artificial life robotics VLSI design and related domains ICES 2001 reunited this burgeoning community.
