Neural Models Of Language Processes:

Neural Models of language Processes Michael Arbib, 2012-12-02 Neural Models of Language Processes offers an interdisciplinary approach to understanding the nature of human language and the means whereby we use it. The book is organized into five parts. Part I provides an opening framework that addresses three tasks: to place neurolinguistics in current perspective, to provide two case studies of aphasia, and to discuss the rules of the game of the various disciplines that contribute to this volume. Part II on artificial intelligence (AI) and processing models discusses the contribution of AI to neurolinguistics. The chapters in this section introduce three AI systems for language perception: the HWIM and HEARSAY systems that proceed from an acoustic input to a semantic interpretation of the utterance it represents, and the Marcus9 system for parsing sentences presented in text. Studying these systems demonstrates the virtues of implemented or implementable models. Part III on linguistic and psycholinguistic perspectives includes studies such as nonaphasic language behavior and the linguistics and psycholinguistics of sign language. Part IV examines neurological perspectives such as the neuropathological basis of Broca's aphasia and the simulation of speech production without a computer. Part V on neuroscience and brain theory includes studies such as the histology, architectonics, and asymmetry of language areas, hierarchy, and evolution in neurolinguistics and perceptual motor processes, and the neural basis of language.

Reversible Grammar in Natural Language Processing T. Strzalkowski,2012-12-06 Reversible grammar allows computational models to be built that are equally well suited for the analysis and generation of natural language utterances This task can be viewed from very different perspectives by theoretical and computational linguists and computer scientists The papers in this volume present a broad range of approaches to reversible bi directional and non directional grammar systems that have emerged in recent years This is also the first collection entirely devoted to the problems of reversibility in natural language processing Most papers collected in this volume are derived from presentations at a workshop held at the University of California at Berkeley in the summer of 1991 organised under the auspices of the Association for Computational Linguistics This book will be a valuable reference to researchers in linguistics and computer science with interests in computational linguistics natural language processing and machine translation as well as in practical aspects of computability

Redefining Recovery from Aphasia Dalia Cahana-Amitay,Martin Albert,2015-01-07 This book focuses on two fundamental aspects of brain language relations one concerns the neural organization of language in the healthy brain the other challenges current approaches to treatment of aphasia and offers a new theory for recovery from aphasia The essence of the book lies in the phrase neural

multifunctionality the constant and dynamic incorporation of non linguistic functions into language models of the intact brain The book makes the claim that language is a construction created as we use it and cannot be understood as being supported by neurally based linguistic networks only Rather language emerges from the constant and dynamic interaction among neural networks subserving cognitive affective and praxic functions with neural networks subserving lexical retrieval naming sentence processing comprehension and discourse communication conversation In persons with stroke induced aphasia neural networks for executive system function attention memory motor system function visual system function and emotion interact with neural networks for language to produce the aphasia profile and to influence recovery from aphasia Consequently neural multifunctionality in aphasia explains individual differences in the lesion deficit model and continued recovery over time redefining the concept of recovery from aphasia and offering new opportunities for treatment

Machine Learning and Deep Learning in Natural Language Processing Anitha S. Pillai, Roberto Tedesco, 2023-10-18. Natural Language Processing (NLP) is a sub-field of Artificial Intelligence, linguistics and computer science and is concerned with the generation, recognition and understanding of human languages, both written and spoken. NLP systems examine the grammatical structure of sentences as well as the specific meanings of words and then they utilize algorithms to extract meaning and produce results. Machine Learning and Deep Learning in Natural Language Processing aims at providing a review of current Neural Network techniques in the NLP field, in particular about Conversational Agents, chatbots, Text to Speech, management of non-literal content like emotions but also satirical expressions and applications in the healthcare field. NLP has the potential to be a disruptive technology in various healthcare fields but so far little attention has been devoted to that goal. This book aims at providing some examples of NLP techniques that can, for example, restore speech, detect Parkinson's

disease or help psychotherapists This book is intended for a wide audience Beginners will find useful chapters providing a general introduction to NLP techniques while experienced professionals will appreciate the chapters about advanced management of emotion empathy and non literal content *Origins of the Modern Mind* Merlin Donald,1993-03-15 This

presenting an enterprising and original theory of how the human mind evolved from its presymbolic form **Building and Using Comparable Corpora for Multilingual Natural Language Processing** Serge Sharoff,Reinhard Rapp,Pierre

Zweigenbaum,2023-08-23 This book provides a comprehensive overview of methods to build comparable corpora and of their applications including machine translation cross lingual transfer and various kinds of multilingual natural language

processing The authors begin with a brief history on the topic followed by a comparison to parallel resources and an explanation of why comparable corpora have become more widely used In particular they provide the basis for the

multilingual capabilities of pre trained models such as BERT or GPT The book then focuses on building comparable corpora aligning their sentences to create a database of suitable translations and using these sentence translations to produce

dictionaries and term banks Then it is explained how comparable corpora can be used to build machine translation engines and to develop a wide variety of multilingual applications Growing Old with Two Languages Ellen Bialystok,Margot D.
